Third Quarter Report to Shareholders

Three and nine months ended September 30, 2023

Manulife Financial Corporation
Manulife Financial Corporation (“Manulife” or the “Company”) reported its third quarter results for the period ended September 30, 2023, delivering double-digit growth in core earnings, APE sales and new business value.

Key highlights for the third quarter of 2023 (“3Q23”) include:

• Net income attributed to shareholders of $1.0 billion, up $0.2 billion from transitional net income attributed to shareholders in the third quarter of 2022 (“3Q22”) and up $0.5 billion compared with 3Q22 net income attributed to shareholders.
• Core earnings of $1.7 billion, up 28% on a constant exchange rate basis from 3Q22.
• Core EPS of $0.92, up 35% from $0.68 in 3Q22, and EPS of $0.52 in 3Q23, up 31% compared with transitional EPS of $0.38 in 3Q22 and up 104% compared with EPS of $0.23 in 3Q22.
• LICAT ratio of 137%.

“Our strong operating and new business results this quarter were supported by growth in Asia with a 33% increase in core earnings and 16% increase in new business CSM year-over-year. We also delivered resilient results in Global WAM with sequential core earnings growth, improving core EBITDA margin and positive net flows of $5.8 billion over the past three quarters. We are in a position of strength to weather macroeconomic uncertainties. We continued to deploy capital through share buybacks to further enhance shareholder returns, with nearly $1.3 billion of our common shares repurchased since the start of the year.”

— Roy Gori, Manulife President & Chief Executive Officer

“We delivered core ROE of 16.8% in the third quarter and grew adjusted book value per share to $30.67, despite challenging macroeconomic conditions. Overall, higher rates have benefited, and will continue to benefit, our underlying businesses and financial performance. We remain disciplined in our capital and expense management approach, reporting a higher LICAT ratio in the quarter and improving expense efficiency ratio during 2023.”

— Colin Simpson, Manulife Chief Financial Officer

Profit

Net Income attributed to shareholders rose to $1.0 billion in 3Q23, $0.2 billion higher than 3Q22 transitional net income attributed to shareholders

Manulife reported net income attributed to shareholders of $1.0 billion in 3Q23, which was $0.2 billion higher than 3Q22 transitional net income attributed to shareholders, and $0.5 billion higher than 3Q22 net income attributed to shareholders.

¹ For more information on gross flows and average asset under management and administration ("average AUMA"), see "Non-GAAP and other financial measures" in our 3Q23 MD&A. Percentage growth / declines in gross flows and average AUMA are stated on a constant exchange rate basis.
The increase in 3Q23 net income attributed to shareholders compared with 3Q22 transitional net income attributed to shareholders was driven by growth in core earnings and a one-time tax-related benefit of $290 million, partially offset by a larger net charge from market experience. The net charge from market experience in 3Q23 was primarily related to lower-than-expected returns (including fair value changes) relative to long term assumptions on alternative long duration assets mainly related to real estate, lower-than-expected returns relative to long term assumptions on public equity and a charge from derivatives and hedge accounting ineffectiveness. Net income attributed to shareholders in 3Q23 increased by $0.5 billion compared with 3Q22, driven by the factors mentioned above and $0.3 billion of transitional impacts due to the application of IFRS 9 hedge accounting and expected credit loss ("ECL") principles. Transitional impacts are geography-related and do not impact total shareholders’ equity as the corresponding offset is in other comprehensive income.

**Core earnings grew 28% to $1.7 billion compared with 3Q22**

The increase from the prior year quarter was driven by the non-recurrence of a $256 million provision in our Property and Casualty Reinsurance business related to Hurricane Ian in 3Q22, the favourable impact of rising interest rates on expected investment earnings and earnings on surplus assets net of higher cost of debt financing, as well as improved insurance experience in the U.S. and in Canada. Business growth also contributed to the increase in expected earnings on investments and on insurance contracts. These were partially offset by an increase in the ECL provision primarily related to electric utility bonds and private placements, higher performance-related costs and investments in technology.

**Growth**

**Annualized premium equivalent ("APE") sales of $1.7 billion, up 21% compared with 3Q22**

Our APE sales in the third quarter were boosted by strong performance in Asia, reflecting our diverse business model. In Asia, APE sales increased 20% compared with 3Q22 as a result of growth in Hong Kong and Asia Other. In Hong Kong, APE sales increased 57%, driven by strong growth in our broker and bancassurance channels reflecting the return of demand from mainland Chinese visitor customers following the Hong Kong and mainland China border reopening in February 2023. In Japan, APE sales decreased 6%, due to lower sales in corporate-owned life insurance products. APE sales increased 14% in Asia Other compared with the prior year. Higher bancassurance sales in mainland China and higher broker sales in our International High Net Worth business and in Singapore were partially offset by lower agency and bancassurance sales in Vietnam.

In Canada, APE sales increased 51% driven by a large affinity markets sale. U.S. APE sales decreased 31% due to the adverse impact of higher short-term interest rates on accumulation insurance products, particularly for our affluent customers.

**NBV of $600 million, rose 15% compared with 3Q22**

In Asia, NBV increased 7% from 3Q22 driven by higher sales volumes partially offset by business mix. In Canada, NBV increased 72% driven by higher sales volumes in Individual Insurance and higher margins in Group Insurance. In the U.S., NBV decreased 29% primarily due to lower sales volumes and product mix, partially offset by pricing actions and higher interest rates.

**New business CSM of $507 million, up 6% compared with 3Q22**

In Asia, new business CSM increased 16% year-over-year primarily due to higher sales volumes partially offset by business mix. In Canada, new business CSM increased 16% driven by product mix in Individual Insurance. Under IFRS 17, the majority of Group Insurance and affinity products are classified as premium allocation approach and do not generate CSM. In the U.S., new business CSM decreased 39% driven by lower sales volumes and product mix.

---

1 Asia Other excludes Hong Kong and Japan.
2 Effective January 1, 2023, our International High Net Worth business was reclassified from the U.S. segment to the Asia segment. Prior period comparative information has been restated to reflect the change in segment reporting.
3 Contractual service margin ("CSM").
Global WAM net outflows of $0.8 billion in 3Q23 compared with net inflows of $3.0 billion in 3Q22
Net outflows in Retirement were $3.4 billion in 3Q23 compared with net inflows of $1.4 billion in 3Q22, driven entirely by a large-case pension plan redemption in the U.S. Net outflows in Retail were $0.2 billion in 3Q23 compared with net inflows of $1.0 billion in 3Q22, reflecting lower demand as investors continued to favour short-term cash and money market instruments amid market volatility and higher interest rates. This was partially offset by the launch of our Global Semiconductors strategy in Japan and higher net inflows in mainland China from acquiring full ownership of Manulife Fund Management (“MFM”) in the fourth quarter of 2022. Net inflows in Institutional Asset Management were $2.8 billion in 3Q23 compared with net inflows of $0.6 billion in 3Q22, driven by higher net flows in fixed income mandates, and higher sales of equity and agriculture mandates, as well as the impact of the MFM acquisition.

Balance Sheet

CSM net of NCI\(^1\) was $17,369 million as at September 30, 2023
CSM increased $172 million and $86 million net of NCI compared with December 31, 2022. Organic CSM movement was an increase of $629 million for the nine months ended September 30, 2023, driven by the impact of new insurance business and expected movements related to finance income or expenses, partially offset by amounts recognized for service provided in year-to-date earnings and a net reduction from insurance experience. Inorganic CSM movement was a decrease of $457 million for the same period, driven by net unfavourable impacts of equity market experience and higher interest rates on certain participating and variable annuity contracts, as well as changes in foreign currency exchange rates, partially offset by the changes from our annual review of actuarial methods and assumptions. Post-tax CSM net of NCI\(^2\) was $14,992 million as at September 30, 2023.

Annual Review of Actuarial Methods and Assumptions

We completed our annual review of actuarial methods and assumptions, which resulted in a net favourable impact of $347 million\(^3\), comprised of an increase in pre-tax net income attributed to shareholders of $27 million (a decrease of $14 million post-tax), an increase in pre-tax net income attributed to participating policyholders of $58 million ($74 million post-tax), an increase in CSM net of NCI of $116 million, and an increase in pre-tax other comprehensive income of $146 million ($110 million post-tax). Assumptions reviewed this year included our Canada variable annuity assumptions, morbidity assumptions in certain Asia markets, mortality assumptions in the U.S. life insurance business, lapse assumptions in Canada and other methodology refinements.

Strategic Highlights

We are making decisions easier for our global and diverse customer base
During 3Q23 we launched a unified high net worth onboarding platform in Bermuda\(^4\), Hong Kong and Singapore, to our international brokers to deliver a consistent high touch experience for both distributors and customers by streamlining new business application, underwriting and compliance processes across our three high net worth markets. In Canada, we expanded our Personalized Medicine program to all Group Benefits extended healthcare plans, making this service available to more customers, while enabling them to learn about medications that best meet their needs and work with healthcare providers on customized treatment plans that can lead to better outcomes. Meanwhile, Global WAM continued to fulfill investor needs for wealth solutions through the expansion of our offerings with the launch of the Global Semiconductors strategy in Japan which garnered more than $0.7 billion in net flows during the quarter, as well as the launch of a Municipal Opportunities Separately Managed Account in U.S. Retail, built on our mutual fund of the same name.

---

1 Non-controlling interests (“NCI”).
2 Post-tax contractual service margin net of NCI (“post-tax CSM net of NCI”) is a non-GAAP financial measure. For more information on non-GAAP and other financial measures, see “Non-GAAP and other financial measures” in our 3Q23 Management’s Discussion and Analysis (“MD&A”).
3 This amount excludes the portion related to NCI.
4 This represents our International High Net Worth business.
In the U.S., we expanded our reach into the employer market by introducing a Premier Benefit Indexed Universal Life product. This permanent life insurance product, available through the workplace, offers a streamlined digital process for employees to purchase individual coverage and includes our John Hancock Vitality PLUS feature. In addition, we launched a distribution relationship with JPMorgan Chase & Co. enabling new sales of our suite of products, including our John Hancock Vitality program, through its network of more than 6,900 advisors.

**We are accelerating digital initiatives to move faster and meet customers’ personalized needs**

In Canada, we announced a strategic partnership with League, a leading healthcare technology provider, to offer our Group Benefits members more integrated digital healthcare experiences, enabling them to connect their benefits directly with healthcare options. This partnership continues our digitization efforts to meet growing demand for more personalized digital experiences that help customers understand their health, focus on prevention, access care, and better comprehend and optimize their benefits. In the U.S., we continued to optimize our digital capabilities to create a seamless, digital customer experience through the launch of single sign-on for John Hancock Vitality customers between John Hancock Life and Vitality websites, improvement of the website navigation of our producer portal, and enhancement of the interactive voice response authentication enabling 31% of inbound calls to be completed with no human interaction in the quarter.

In Asia, we further automated the claims-handling process in Hong Kong to improve operational efficiency and deliver a better customer experience as we continue to leverage data to enhance our auto-adjudication engine, driving an almost twofold-increase of straight-through processed claims compared with 3Q22. In Global WAM, we accelerated customer adoption of digital applications in Canada Retirement through our “Say Goodbye to Paper” campaign which contributed to a 165% increase in members converting to e-statements over the 3-month campaign period and an increase in satisfaction in their digital experience over the prior quarter.
MANAGEMENT’S DISCUSSION AND ANALYSIS

This Management’s Discussion and Analysis (“MD&A”) is current as of November 8, 2023, unless otherwise noted. This MD&A should be read in conjunction with our unaudited Interim Consolidated Financial Statements for the three and nine months ended September 30, 2023 and the MD&A and audited Consolidated Financial Statements contained in our 2022 Annual Report.

For further information relating to our risk management practices and risk factors affecting the Company, see “Risk Management and Risk Factors” and “Critical Actuarial and Accounting Policies” in the MD&A in our 2022 Annual Report and the “Risk Management” note to the Consolidated Financial Statements in our most recent annual and interim reports.

In this MD&A, the terms “Company”, “Manulife”, “we” and “our” mean Manulife Financial Corporation (“MFC”) and its subsidiaries. All amounts are reported in Canadian dollars, unless otherwise indicated. Any information contained in, or otherwise accessible through, websites mentioned in this MD&A does not form a part of this document.

A TOTAL COMPANY PERFORMANCE

A1 Implementation of IFRS 17 and IFRS 9

Manulife adopted IFRS 17 “Insurance Contracts” and IFRS 9 “Financial Instruments” effective for years beginning on or after January 1, 2023, to be applied retrospectively. See “Future Accounting and Reporting Changes” in the MD&A in our 2022 Annual Report (“2022 MD&A”). Our quarterly and year-to-date 2022 results have been restated in accordance with IFRS 17, including the other comprehensive income option\(^1\), and IFRS 9. Audited restated consolidated financial statements for the year ended December 31, 2022 will be included in our 2023 Annual Report.

The 2022 comparative results restated in this MD&A may not be fully representative of our market risk profile, as the transition of our general fund portfolio for asset-liability matching purposes under IFRS 17 and IFRS 9 was not completed until early 2023. Consequently, year-over-year variations between our 2023 results compared with the 2022 results should be viewed in this context.

In addition, our 2022 results are also not directly comparable with 2023 results because IFRS 9 hedge accounting and expected credit loss (“ECL”) principles are applied prospectively effective January 1, 2023. Accordingly, we have also presented comparative quarterly and year-to-date 2022 results as if IFRS had allowed such principles to be implemented for 2022 (the “IFRS 9 transitional impacts”). This presentation will only be reported in our MD&A’s for 2023 for certain 2022 comparative results.

These 2022 comparative results are non-GAAP and denoted as being “transitional” and include the financial measures noted below:

- Transitional net income (loss) attributed to shareholders;
- Transitional net income (loss) before income taxes;
- Transitional net income (loss);
- Transitional net income (loss) attributed to shareholders before income taxes;
- Common shareholders’ transitional net income (loss);
- Transitional return on common shareholders’ equity (“Transitional ROE”);
- Transitional basic earnings (loss) per common share; and
- Transitional diluted earnings (loss) per common share.

Adoption of IFRS 17 and IFRS 9 has also resulted in additional definitions and revisions to the following financial measures:

- **New non-GAAP financial measures**: post-tax contractual service margin (“post-tax CSM”); post-tax contractual service margin net of non-controlling interests ("NCI") ("post-tax CSM net of NCI"); Drivers of Earnings (“DOE”) line items for net investment result, other, income tax (expense) recovery and transitional net income attributed to participating policyholders and NCI; and core DOE line items for core net insurance service result, core net investment result, other core earnings, and core income tax (expense) recovery.
- **New non-GAAP ratios**: expenditure efficiency ratio with its component non-GAAP financial measures: total expenditures and core expenditures (for 2022 and 2023 quarterly and year-to-date results only); and adjusted book value per common share.
- **Revised definitions of non-GAAP and other financial measures**: core earnings; expense efficiency ratio with its new component non-GAAP financial measures: total expenses and core expenses; consolidated capital; and financial leverage ratio.

\(^1\) More information about the other comprehensive income option can be found in note 2 of the Consolidated Financial Statements contained in our 2022 Annual Report.

\(^{(1)}\) 2022 results for transitional net income attributed to shareholders, transitional diluted earnings per common share and transitional ROE are adjusted to include IFRS 9 hedge accounting and expected credit loss principles (“IFRS 9 transitional impacts”). See section A1 “Implementation of IFRS 17 and IFRS 9” of the MD&A above for more information. For 2023, there are no IFRS 9 transitional adjustments as ECL and hedge accounting is effective January 1, 2023 and therefore the impact is included in net income attributed to shareholders.

\(^{(2)}\) This item is a non-GAAP financial measure. See “Non-GAAP and other financial measures” below for more information.

\(^{(3)}\) This item is a non-GAAP ratio. See “Non-GAAP and other financial measures” below for more information.

Quarterly profitability

Manulife’s net income attributed to shareholders was $1,013 million in the third quarter of 2023 (“3Q23”) compared with net income attributed to shareholders of $491 million and transitional net income attributed to shareholders of $777 million in the third quarter of 2022 (“3Q22”). The 3Q22 transitional net income attributed to shareholders includes $286 million of IFRS 9 transitional impacts. Net income attributed to shareholders is comprised of core earnings (consisting of items we believe reflect the underlying earnings capacity of the business), which amounted to $1,743 million in 3Q23 compared with $1,339 million in 3Q22, and items excluded from core earnings, which amounted to a net charge of $730 million in 3Q23 compared with a net charge of $848 million in 3Q22. Items excluded from core earnings in 3Q22 on a transitional basis amounted to a net charge of $562 million. The effective tax rate on net income (loss) attributed to shareholders was a recovery of 7% in 3Q23 compared with a tax expense of 10% in 3Q22, reflecting a 3Q23 one-time tax-related benefit of $290 million and differences in the jurisdictional mix of pre-tax profits and losses.

Net income attributed to shareholders in 3Q23 was $236 million higher than 3Q22 transitional net income attributed to shareholders driven by growth in core earnings and the above-noted one-time tax-related benefit, partially offset by a larger net charge from market experience. The net charge from market experience in 3Q23 was primarily related to lower-than-expected returns (including fair value changes) relative to long-term assumptions on alternative long duration assets (“ALDA”) mainly related to real estate, lower-than-expected returns relative to long-term assumptions on public equity and a charge from derivatives and hedge accounting ineffectiveness. Net income attributed to shareholders in 3Q23 increased $522 million compared with 3Q22, driven by the factors mentioned above and the $286 million of IFRS 9 transitional impacts (transitional impacts are geography-related and do not impact total shareholders’ equity as the corresponding offset is in other comprehensive income).
Core earnings increased $404 million or 28% on a constant exchange rate basis compared with 3Q22. The increase in core earnings compared with 3Q22 was driven by the non-recurrence of a $256 million provision in our Property & Casualty ("P&C") Reinsurance business related to Hurricane Ian in 3Q22, an increase in expected investment earnings resulting from higher investment yields and business growth, improved insurance experience in the U.S. and Canada, an increase in net fee income from higher average AUMA and higher performance fees in Global Wealth and Asset Management ("Global WAM"), and higher returns on surplus assets. These were partially offset by an increase in the ECL provision primarily related to electric utility bonds and private placements, higher performance-related costs in Corporate and Other and Global WAM, investments in technology and higher cost of debt financing.

The components of the items excluded from core earnings are outlined in the table below and the annual review of actuarial methods and assumptions that flow directly through income is discussed in section D2 “Actuarial methods and assumptions” below.

**Year-to-date profitability**

Net income attributed to shareholders for the nine months ended September 30, 2023 was $3,444 million compared with a net loss attributed to shareholders of $2,848 million and transitional net income attributed to shareholders of $2,270 million for the nine months ended September 30, 2022. The year-to-date 2022 transitional net income attributed to shareholders includes $5,118 million of IFRS 9 transitional impacts. Year-to-date core earnings amounted to $4,911 million in 2023 compared with $4,258 million in the same period of 2022, and items excluded from year-to-date core earnings amounted to a net charge of $1,467 million in 2023 compared with a net charge of $7,106 million in the same period of 2022. Items excluded from year-to-date core earnings in the same period of 2022 on a transitional basis amounted to a net charge of $1,988 million. The effective tax rate on year-to-date net income (loss) attributed to shareholders was 12% in 2023 compared with 25% for the same period in 2022, reflecting a 2023 one-time tax-related benefit of $290 million and differences in the jurisdictional mix of pre-tax profits and losses.

The increase of $1,174 million in year-to-date net income attributed to shareholders in 2023 compared with 2022 transitional net income attributed to shareholders was driven by growth in year-to-date core earnings, the above-noted one-time tax-related benefit and a smaller charge from year-to-date market experience. The net charge from market experience in 2023 was primarily related to lower-than-expected returns (including fair value changes) relative to long-term assumptions on ALDA mainly related to energy and real estate and a net charge from derivatives and hedge accounting ineffectiveness. Year-to-date net income attributed to shareholders in 2023 increased by $6,292 million compared with the year-to-date net loss attributed to shareholders in 2022, driven by factors mentioned above and the $5,118 million of IFRS 9 transitional impacts (transitional impacts are geography-related and do not impact total shareholders’ equity as the corresponding offset is in other comprehensive income).

Year-to-date core earnings in 2023 increased $653 million or 12% compared with the same period of 2022. The increase in year-to-date core earnings compared with 2022 was driven by an increase in expected investment earnings related to higher investment yields and business growth, gains in our P&C Reinsurance business from updates to prior year hurricane provisions in 2023 compared with charges in 2022 including Hurricane Ian, more favourable insurance experience reflecting more favourable experience in Canada and improved, although unfavourable, experience in the U.S., and higher returns on surplus assets net of higher cost of debt financing. These were partially offset by an increase in the 2023 ECL provision primarily driven by commercial mortgages, electric utility bonds and private placements, lower CSM amortization reflecting both a slower amortization on certain variable fee approach ("VFA") contracts and the impact of the 2022 U.S. variable annuity reinsurance transactions, higher performance-related costs in Corporate and Other and Global WAM, and higher investments.

---

1 Percentage growth / declines in core earnings, pre-tax core earnings, total expenses, core expenses, total expenditures, core expenditures, general expenses, CSM net of NCI, new business CSM, assets under management and administration, assets under management, core EBITDA, and Manulife Bank average net lending assets are stated on a constant exchange rate basis, a non-GAAP ratio. See "Non-GAAP and other financial measures" below for more information.

2 For more information on this metric, see "Non-GAAP and other financial measures" below.
in technology. In addition, year-to-date Global WAM core earnings benefited from higher fee spreads and performance fees in Institutional Asset Management partially offset by lower earnings from seed capital investments due to repatriations. Actions to improve the capital efficiency of our legacy business resulted in $29 million lower year-to-date core earnings in 2023 compared with the same period of 2022.

Core earnings by segment is presented in the table below.

(1) Effective January 1, 2023, we have made a number of changes to the composition of reporting segments to better align our financial reporting with our business strategy and operations. Our international high net worth business was reclassified from the U.S. segment to the Asia segment to reflect the contributions of our Bermuda operations alongside the high net worth business that we report in our Singapore and Hong Kong operations. Our investment in the start-up capital of segregated and mutual funds, and investment-related revenue and expense were reclassified from the Corporate and Other segment to the Global WAM segment to more closely align with Global WAM’s management practices. Refinements were made to the allocations of corporate overhead and interest on surplus among segments. Prior period comparative information has been restated to reflect the changes in segment reporting.

The table below presents transitional net income attributed to shareholders and net income attributed to shareholders consisting of core earnings and items excluded from core earnings.

(1) Market experience was a net charge of $1,022 million in 3Q23 primarily driven by lower-than-expected returns (including fair value changes) relative to long-term assumptions on ALDA mainly related to real estate, lower-than-expected returns relative to long-term assumptions on public equity, a charge from derivatives and hedge accounting ineffectiveness, net realized losses from the sale of debt instruments which are classified as fair value through other comprehensive income (“FVOCI”) and a charge in other investment results. Market experience was a net charge of $575 million in 3Q22 consisting of a net loss from lower-than-expected returns relative to long-term assumptions on public equity, net realized losses from the sale of debt instruments which are classified as FVOCI, a loss from changes in foreign currency exchange rates and a net loss from lower-than-expected returns (including fair value changes) relative to long-term assumptions on ALDA mainly related to real estate. This was partially offset by losses on derivatives and hedge accounting ineffectiveness due to unusually large interest rate movements.

(2) Refer to section D2 “Actuarial methods and assumptions” below for detail.

(3) The 3Q23 net gain of $306 million included a one-time tax-related benefit of $230 million, additional tax-related true-ups of $11 million and a gain of $5 million related to a reinsurance transaction in Vietnam. The 3Q22 charge of $13 million is related to an increase to an existing legal provision in the U.S.
Transitional net income attributed to shareholders by segment and net income attributed to shareholders by segment are presented in the following tables.

(1) Effective January 1, 2023, we have made a number of changes to the composition of reporting segments to better align our financial reporting with our business strategy and operations. Our international high net worth business was reclassified from the U.S. segment to the Asia segment to reflect the contributions of our Bermuda operations alongside the high net worth business that we report in our Singapore and Hong Kong operations. Our investment in the start-up capital of segregated and mutual funds, and investment-related revenue and expense were reclassified from the Corporate and Other segment to the Global WAM segment to more closely align with Global WAM’s management practices. Refinements were made to the allocations of corporate overhead and interest on surplus among segments. Prior period comparative information has been restated to reflect the changes in segment reporting.

### Expenditure efficiency ratio and expense efficiency ratio

In 2018 we introduced our strategic priority of expense efficiency. The expense efficiency ratio is a financial measure which we use to measure progress on this priority. The expense efficiency ratio reflects only those expenses that flow directly through core earnings (“core expenses”). Due to changes introduced by IFRS 17, certain costs that are directly attributable to acquire new business are capitalized into the CSM instead of directly flowing through core earnings and are now excluded from the ratio.

To provide a reference point to our expense efficiency ratio prior to the adoption of IFRS 17, we are temporarily introducing an additional efficiency ratio, the expenditure efficiency ratio, for 2022 and 2023 only, which captures all expenses, including costs that are directly attributable to the acquisition of new business (“core expenditures”).

### Quarterly expenditure efficiency ratio and expense efficiency ratio

The expenditure efficiency ratio was 50.9% in 3Q23, compared with 53.6% in 3Q22. The 2.7 percentage point decrease in the ratio compared with 3Q22 was driven by a 25% increase in pre-tax core earnings partially offset by a 12% increase in core expenditures. 3Q23 core expenditures increased as a result of higher performance-related costs, investments in technology and additional expenses related to the impact of now consolidating 100% of Manulife Fund Management (“MFM”). Costs directly attributable to the acquisition of new business represented approximately 23% and 25% of total core expenditures in 3Q23 and 3Q22, respectively.
The **expense efficiency ratio** was 44.3% in 3Q23, compared with 46.3% in 3Q22. The 2.0 percentage point decrease in the ratio compared with 3Q22 was driven by the items noted above related to the decrease in the expenditure efficiency ratio excluding those costs that are directly attributable to the acquisition of new business which are reflected in the CSM under IFRS 17.

Total 3Q23 general expenses increased 14% on an actual exchange rate basis and 12% on a constant exchange rate basis compared with 3Q22 driven by the items noted above related to the decrease in the expenditure efficiency ratio and items outside of core earnings, which were not material in 3Q23. However, general expenses are also net of directly attributable maintenance expenses and directly attributable acquisition expenses for products measured using the premium allocation approach (“PAA”) which are included in insurance service expenses on our financial statements. Directly attributable maintenance expenses and directly attributable acquisition expenses for products measured using the PAA increased 12% on a constant exchange rate basis and 13% on an actual exchange rate basis in 3Q23 compared with 3Q22.

### Year-to-date expenditure efficiency ratio and expense efficiency ratio

On a year-to-date basis, the **expenditure efficiency ratio** was 52.2% in 2023 compared with 52.3% in the same period of 2022. The 0.1 percentage point decrease in the year-to-date ratio compared with 2022 was driven by an 11% increase in year-to-date pre-tax core earnings, partially offset by an 11% increase in year-to-date core expenditures. 2023 year-to-date core expenditures increased as a result of higher performance-related costs, investments in technology, higher distribution costs reflecting stronger top-line growth, additional expenses related to the impact of now consolidating 100% of MFM and higher travel and return to pre-pandemic activities. Year-to-date costs directly attributable to the acquisition of new business represented approximately 24% and 25% of total year-to-date core expenditures in 2023 and 2022, respectively.

The year-to-date **expense efficiency ratio** was 45.5% in 2023, compared with 45.2% in the same period of 2022. The 0.3 percentage point increase in the year-to-date ratio compared with 2022 was driven by the items noted above related to the decrease in the year-to-date expenditure efficiency ratio excluding those costs that are directly attributable to the acquisition of new business which are reflected in the CSM under IFRS 17.

Total year-to-date general expenses in 2023 increased 15% on an actual exchange rate basis and 12% on a constant exchange rate basis compared with 2022 driven by the items noted above related to the decrease in the expenditure efficiency ratio and items outside of core earnings. However, general expenses are also net of directly attributable maintenance expenses and directly attributable acquisition expenses for products measured using the PAA which are included in insurance service expenses on our financial statements. Directly attributable maintenance expenses and directly attributable acquisition expenses for products measured using the PAA increased 14% on a constant exchange rate basis and 16% on an actual exchange rate basis in 2023 compared with 2022.
Annualized premium equivalent ("APE") sales were $1.7 billion in 3Q23, an increase of 21%\(^2\) compared with 3Q22. Our APE sales in the third quarter were boosted by strong performance in Asia, reflecting our diverse business model. In Asia, APE sales increased 20% compared with 3Q22 as a result of growth in Hong Kong and Asia Other\(^3\). In Hong Kong, APE sales increased 57% compared with 3Q22 driven by strong growth in our broker and bancassurance channels reflecting the return of demand from mainland Chinese visitor ("MCV") customers following the Hong Kong and mainland China border reopening in February 2023. In Japan, APE sales decreased 6% compared with 3Q22, due to lower sales in corporate-owned life insurance ("COLI") products. APE sales increased 14% in Asia Other compared with 3Q22. Higher bancassurance sales in mainland China and higher broker sales in our International High Net Worth business and in Singapore were partially offset by lower agency and bancassurance sales in Vietnam. In Canada, APE sales increased 51% compared with 3Q22 driven by a large affinity markets sale. U.S. APE sales decreased 31% compared with 3Q22 due to the adverse impact of higher short-term interest rates on accumulation insurance products, particularly for our affluent customers.

1 Effective January 1, 2023, our international high net worth business was reclassified from the U.S. segment to the Asia segment to reflect the contributions of our Bermuda operations alongside the high net worth business that we report in our Singapore and Hong Kong operations. Prior period comparative information has been restated to reflect the reclassification.

2 Percentage growth / declines in APE sales is stated on a constant exchange rate basis.

3 Asia Other excludes Hong Kong and Japan.
Year-to-date APE sales of $4.9 billion in 2023 were 9% higher than the same period of 2022, driven by higher year-to-date sales in Asia and Canada partially offset by lower year-to-date sales in the U.S.

**New business value ("NBV") was $600 million in 3Q23, an increase of 15%**¹ compared with 3Q22. In Asia, NBV increased 7% compared with 3Q22 driven by higher sales volumes partially offset by business mix. In Canada, NBV increased 72% compared with 3Q22 driven by higher sales volumes in Individual Insurance and higher margins in Group Insurance. In the U.S., NBV decreased 29% compared with 3Q22 primarily due to lower sales volumes and product mix, partially offset by pricing actions and higher interest rates.

Year-to-date NBV was $1,694 million in 2023, an increase of 6% compared with the same period of 2022. In Asia, year-to-date NBV in 2023 increased 2% compared with 2022 driven by higher sales volumes partially offset by business mix. In Canada, year-to-date NBV increased 28% compared with 2022 driven by higher sales volumes in Individual Insurance, partially offset by lower Annuities margins largely due to product mix, and lower segregated fund sales volumes. In the U.S., year-to-date NBV increased 4% compared with 2022 due to pricing actions, higher interest rates and product mix, partially offset by lower sales volumes.

**New business contractual service margin ("New Business CSM") was $507 million in 3Q23, an increase of 6% compared with 3Q22. In Asia, new business CSM increased 16% compared with 3Q22 primarily due to higher sales volumes partially offset by business mix. In Canada, new business CSM increased 16% compared with 3Q22 driven by product mix in Individual Insurance. Under IFRS 17, the majority of Group Insurance and affinity products are classified as PAA and do not generate CSM. In the U.S., new business CSM decreased 39% compared with 3Q22 driven by lower sales volumes and product mix.

Year-to-date new business CSM was $1,541 million in 2023, an increase of 3% compared with the same period of 2022. In Asia, year-to-date new business CSM in 2023 increased 12% compared with 2022, primarily due to higher sales volumes partially offset by business mix. In Canada, year-to-date new business CSM increased 1% compared with 3Q22 due to product mix in Individual Insurance. As noted above, under IFRS 17, the majority of group insurance and affinity products are classified as PAA and do not generate CSM. In the U.S., year-to-date new business CSM decreased 24% compared with 2022 driven primarily by lower sales volumes and product mix.

**The contractual service margin ("CSM") net of NCI was $17,369 million as at September 30, 2023, an increase of $86 million compared with December 31, 2022. The increase in CSM net of NCI reflects an increase in total CSM movement of $172 million, net of an increase in NCI of $86 million. Organic CSM movement was an increase of $629 million for the nine months ended September 30, 2023, driven by the impact of new insurance business and expected movements related to finance income or expenses, partially offset by amounts recognized for service provided in year-to-date earnings and a net reduction from insurance experience. Inorganic CSM movement was a decrease of $457 million for the same period, driven by net unfavourable impacts of equity market experience and higher interest rates on certain participating and variable annuity contracts, as well as changes in foreign currency exchange rates, partially offset by the changes from our annual review of actuarial methods and assumptions. Post-tax CSM net of NCI was $14,992 million as at September 30, 2023.**

**Global WAM reported net outflows** were $0.8 billion in 3Q23 compared with net inflows of $3.0 billion in 3Q22. Net outflows in Retirement were $3.4 billion in 3Q23 compared with net inflows of $1.4 billion in 3Q22, driven entirely by a large-case pension plan redemption in the U.S. Net outflows in Retail were $0.2 billion in 3Q23 compared with net inflows of $1.0 billion in 3Q22, reflecting lower demand as investors continued to favour short-term cash and money market instruments amid market volatility and higher interest rates. This was partially offset by the launch of our Global Semiconductors strategy in Japan and higher net inflows in mainland China from acquiring full ownership of MFM in the fourth quarter of 2022 (“4Q22”). Net inflows in Institutional Asset Management were $2.8 billion in 3Q23 compared with net inflows of $0.6 billion in 3Q22, driven by higher net flows in fixed income mandates, and higher sales of equity and agriculture mandates, as well as the impact of the MFM acquisition.

---

¹ Percentage growth / declines in NBV is stated on a constant exchange rate basis.
Year-to-date net inflows were $5.8 billion in 2023, compared with $11.5 billion in the same period of 2022. The decrease was primarily due to higher pension plan redemptions in Retirement, and lower Retail sales from lower investor demand. This was partially offset by lower mutual fund redemption rates, and the launch of new products in Institutional Asset Management in 2023 as well as the impact of the MFM acquisition as mentioned above.

\(^1\) This item is disclosed under OSFI’s Life Insurance Capital Adequacy Test Public Disclosure Requirements guideline. Comparative LICAT ratios for 2022 are as reported in 2022 and have not been restated for the implementation of IFRS 17.

\(^2\) This item is a non-GAAP ratio. See “Non-GAAP and other financial measures” below for more information.

\(^3\) This item is a capital management measure. For more information on this metric, see “Non-GAAP and other financial measures” below.

The Life Insurance Capital Adequacy Test (“LICAT”) ratio for The Manufacturers Life Insurance Company (“MLI”) as at September 30, 2023 was 137% compared with 136% as at June 30, 2023. The one percentage point increase reflects the impact of core earnings and market movements in the quarter, partly offset by shareholders’ dividends and common share buybacks.

MFC’s LICAT ratio was 124% as at September 30, 2023 compared with 123% as at June 30, 2023 with the increase driven by similar factors that impacted the movement in MLI’s LICAT ratio. The difference between the MLI and MFC ratios as at September 30, 2023 was largely due to the $6.2 billion of MFC senior debt outstanding that does not qualify as available capital at the MFC level but, based on the form it was down-streamed, qualifies as regulatory capital for MLI.

MFC’s financial leverage ratio\(^1\) as at September 30, 2023 was 25.2%, a decrease of 0.6 percentage points from 25.8% as at June 30, 2023. The decrease in the ratio was driven by the increase in total equity due to net accumulated other comprehensive income (“AOCI”) gains from higher interest rates, growth in retained earnings and the impact of weaker Canadian dollar.

MFC’s consolidated capital\(^1\) was $71.4 billion as at September 30, 2023, an increase of $1.8 billion compared with $69.6 billion as at December 31, 2022. The increase was primarily driven by net issuance of subordinated debt\(^2\), an increase in total equity and higher post-tax CSM\(^3\). The increase in total equity was due to net AOCI gains from higher interest rates, and growth in retained earnings, partially offset by common share buybacks and the impact of stronger Canadian dollar.

Cash and cash equivalents and marketable securities\(^4\) was $237.7 billion as at September 30, 2023 compared with $241.0 billion as at December 31, 2022. The decrease was primarily driven by the lower market value of debt instruments due to higher interest rates.

Book value per common share as at September 30, 2023 was $22.42, a 4% increase compared with $21.56 as at December 31, 2022. The number of common shares outstanding was 1,818 million as at September 30, 2023, a decrease of 47 million shares from 1,865 million as at December 31, 2022, due to common share buybacks.

---

1. Effective January 1, 2022, the calculation of financial leverage ratio and consolidated capital now includes the impact of post-tax CSM. See “Non-GAAP and other financial measures below” for more information.
2. The net issuance of subordinated debt consists of the issuance of $1.2 billion in the first quarter of 2023 and the redemption of $0.6 billion in the second quarter of 2023.
3. This item is a non-GAAP financial measure. See “Non-GAAP and other financial measures” below for more information.
4. Includes cash & cash equivalents, comprised of cash on deposit, Canadian and U.S. Treasury Bills and high quality short-term investments, and marketable assets, comprised of investment grade government and agency bonds, investment grade corporate bonds, investment grade securitized instruments, publicly traded common stocks and preferred shares.
Adjusted book value per common share as at September 30, 2023 was $30.67, a 4% increase compared with $29.42 as at December 31, 2022 driven by an increase in adjusted book value and a lower number of common shares outstanding. The adjusted book value increased $0.9 billion due to growth in total common shareholder’s equity and an increase in post-tax CSM. The increase in common shareholder’s equity reflects the impact of net AOCI gains from higher interest rates, and growth in retained earnings partially offset by a stronger Canadian dollar and common share buybacks.

A5 Assets under management and administration (“AUMA”)

AUMA as at September 30, 2023 was $1.3 trillion, an increase of 2% compared with December 31, 2022, primarily due to the favourable impact of markets and net inflows. Segregated funds net assets increased 2% primarily due to the favourable impact of markets and total invested assets were in line with December 31, 2022, on an actual exchange rate basis.

A6 Impact of foreign currency exchange rates

Changes in foreign currency exchange rates from 3Q22 to 3Q23 increased core earnings by $29 million in 3Q23, primarily due to a weaker Canadian dollar compared with the U.S. dollar. Changes in foreign currency exchange rates increased year-to-date core earnings by $136 million in 2023 compared with the same period of 2022 primarily due to a weaker Canadian dollar compared with the U.S. dollar. The impact of foreign currency exchange rates on items excluded from core earnings does not provide relevant information given the nature of those items.

A7 Business highlights

We are making decisions easier for our global and diverse customer base

During 3Q23 we launched a unified high net worth onboarding platform in Bermuda, Hong Kong and Singapore, to our international brokers to deliver a consistent high touch experience for both distributors and customers by streamlining new business application, underwriting and compliance processes across our three high net worth markets. In Canada, we expanded our Personalized Medicine program to all Group Benefits extended healthcare plans, making this service available to more customers, while enabling them to learn about medications that best meet their needs and work with healthcare providers on customized treatment plans that can lead to better outcomes. Meanwhile, Global WAM continued to fulfill investor needs for wealth solutions through the expansion of our offerings with the launch of the Global Semiconductors strategy in Japan which garnered more than $0.7 billion in net flows during the quarter, as well as the launch of a Municipal Opportunities Separately Managed Account in U.S. Retail, built on our mutual fund of the same name.

In the U.S., we expanded our reach into the employer market by introducing a Premier Benefit Indexed Universal Life product. This permanent life insurance product, available through the workplace, offers a streamlined digital process for employees to purchase individual coverage and includes our John Hancock Vitality PLUS feature. In addition, we launched a distribution relationship with JPMorgan Chase & Co. enabling new sales of our suite of products, including our John Hancock Vitality program, through its network of more than 6,900 advisors.

---

1 This item is a non-GAAP financial measure. See “Non-GAAP and other financial measures” below for more information.
2 This represents our International High Net Worth business.
We are accelerating digital initiatives to move faster and meet customers’ personalized needs

In Canada, we announced a strategic partnership with League, a leading healthcare technology provider, to offer our Group Benefits members more integrated digital healthcare experiences, enabling them to connect their benefits directly with healthcare options. This partnership continues our digitization efforts to meet growing demand for more personalized digital experiences that help customers understand their health, focus on prevention, access care, and better comprehend and optimize their benefits. In the U.S., we continued to optimize our digital capabilities to create a seamless, digital customer experience through the launch of single sign-on for John Hancock Vitality customers between John Hancock Life and Vitality websites, improvement of the website navigation of our producer portal, and enhancement of the interactive voice response authentication enabling 31% of inbound calls to be completed with no human interaction in the quarter.

In Asia, we further automated the claims-handling process in Hong Kong to improve operational efficiency and deliver a better customer experience as we continue to leverage data to enhance our auto-adjudication engine, driving an almost twofold-increase of straight-through processed claims compared with 3Q22. In Global WAM, we accelerated customer adoption of digital applications in Canada Retirement through our “Say Goodbye to Paper” campaign which contributed to a 165% increase in members converting to e-statements over the 3-month campaign period and an increase in satisfaction in their digital experience over the prior quarter.

\(^\d\) See "Non-GAAP and other financial measures" below for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 2023 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 2022.

\(^\d\) This item is a non-GAAP financial measure. See "Non-GAAP and other financial measures" below for more information.

Asia's net income attributed to shareholders was $84 million in 3Q23 compared with net income attributed to shareholders of $280 million and transitional net income attributed to shareholders of $176 million in 3Q22. The 3Q22 transitional net income attributed to shareholders includes a charge of $104 million from IFRS 9 transitional impacts. Net income attributed to shareholders is comprised of core earnings, which were $522 million in 3Q23 compared with $387 million in 3Q22, and items excluded from core earnings, which amounted to a net charge of $438 million in 3Q23 compared with a net charge of $107 million in 3Q22. Items excluded from core earnings in 3Q22 on a transitional basis amounted to a net charge of $211 million. See section E3 "Non-GAAP and other financial measures" below, for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 3Q23 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 3Q22. See section A2 "Profitability" above, for explanations of the items excluded from core earnings. The changes in core earnings expressed in Canadian dollars were due to the factors described below and additionally, reflected a net $9 million favourable impact due to changes in various foreign currency exchange rates versus the Canadian dollar.

\(^1\) Effective January 1, 2023, we have made a change to the composition of reporting segments to better align our financial reporting with our business strategy and operations. Our international high net worth business was reclassified from the U.S. segment to the Asia segment (in Asia Other) to reflect the contributions of our Bermuda operations alongside the high net worth business that we report in our Singapore and Hong Kong operations. Refinements were made to the allocations of corporate overhead and interest on surplus among segments. Prior period comparative information has been restated to reflect the changes in segment reporting.
Expressed in U.S. dollars, the presentation currency of the segment, net income attributed to shareholders was US$63 million in 3Q23 compared with net income attributed to shareholders of US$216 million and transitional net income attributed to shareholders of US$134 million in 3Q22. Core earnings were US$390 million in 3Q23 compared with US$296 million in 3Q22 and items excluded from core earnings were a net charge of US$327 million in 3Q23 compared with a net charge of US$80 million in 3Q22. Items excluded from core earnings in 3Q22 on a transitional basis were a net charge of US$162 million.

Core earnings in 3Q23 increased 33% compared with 3Q22 driven by higher expected investment income due to higher investment yields and business growth, an increase in CSM amortization in Hong Kong, reflecting the impact of the annual review of actuarial methods and assumptions, and improved new business results on onerous contracts as a result of product actions.

Year-to-date net income attributed to shareholders was US$543 million in 2023 compared with net income attributable to shareholders of US$285 million and transitional net income attributable to shareholders of US$118 million in the same period of 2022. The 2022 year-to-date transitional net income attributed to shareholders includes a charge of US$167 million from IFRS 9 transitional adjustments. Year-to-date core earnings were US$1,104 million in 2023 compared with US$1,027 million in 2022 driven by higher expected investment income due to higher investment yields and business growth, improved new business results on onerous contracts as a result of product actions, and a neutral provision for ECL in 2023 compared with a charge in 2022, partially offset by a slower CSM amortization and less favourable claims experience. Items excluded from year-to-date core earnings were a net charge of US$561 million in 2023 compared with a net charge of US$742 million for the same period of 2022. Items excluded from core earnings in 2022 on a transitional basis amounted to a net charge of US$909 million. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of year-to-date core earnings to year-to-date net income (loss) attributed to shareholders for 2023, and year-to-date core earnings and year-to-date transitional net income (loss) attributed to shareholders to year-to-date net income (loss) attributed to shareholders for 2022. Expressed in Canadian dollars, year-to-date core earnings reflected a net $40 million favourable impact of changes in various foreign currency exchange rates versus the Canadian dollar.

APE sales in 3Q23 were US$835 million, an increase of 20% compared with 3Q22, driven by growth in Hong Kong and Asia Other. NBV in 3Q23 was US$310 million, an increase of 7% compared with 3Q22 driven by higher sales volumes partially offset by business mix. New business CSM in 3Q23 was US$300 million, an increase of 16% compared with 3Q22, primarily due to higher sales volumes partially offset by business mix. New business value margin (“NBV margin”)1 was 41.9% in 3Q23 compared with 44.9% in 3Q22. Year-to-date APE sales were US$2,582 million in 2023, an increase of 16% compared with the same period of 2022, driven by strong growth in our broker and bancassurance channels in Hong Kong and higher bancassurance sales in Asia Other. Year-to-date NBV and new business CSM in 2023 were US$900 million and US$845 million, an increase of 2% and 12%, respectively, compared with 3Q22, driven by similar reasons noted above for the quarter.

- Hong Kong APE sales in 3Q23 were US$209 million, an increase of 57% compared with 3Q22. The increase reflected strong growth in our broker and bancassurance channels, primarily driven by a return of demand from MCV customers following the reopening of the border between Hong Kong and mainland China since February 2023. Hong Kong NBV and new business CSM in 3Q23 were US$132 million and US$125 million, an increase of 20% and 29%, respectively, compared with 3Q22 due to higher sales volumes, partially offset by higher proportion of lower margin savings products. Hong Kong NBV margin was 63.0% in 3Q23, a decrease of 19.7 percentage points compared with 3Q22.
- Japan APE sales in 3Q23 were US$67 million, a decrease of 6% compared with 3Q22 reflecting lower sales in COLI products. Japan NBV was US$32 million in 3Q23, an increase of 21% compared with 3Q22 due to product management actions, partially offset by lower sales volume. Japan NBV margin was 47.2% in 3Q23, an increase of 10.5 percentage points compared with 3Q22. Japan new business CSM was US$22 million in 3Q23, a decrease of 21% compared with 3Q22 due to lower sales volume and model refinements.

---

1 For more information on this metric, see “Non-GAAP and other financial measures” below.
• Asia Other APE sales in 3Q23 were US$559 million, an increase of 14% compared with 3Q22. Higher bancassurance sales in mainland China and higher broker sales in our International High Net Worth business and in Singapore were partially offset by lower agency and bancassurance sales in Vietnam. Asia Other NBV in 3Q23 was US$146 million, a decrease of 5% compared with 3Q22 due to product mix, partially offset by higher sales volumes. Asia Other NBV margin was 31.6% in 3Q23, a decrease of 3.3 percentage points compared with 3Q22. Asia Other new business CSM in 3Q23 was US$153 million in 3Q23, an increase of 13% compared with 3Q22, driven by higher sales volumes, partially offset by product mix.

CSM net of NCI was US$7,414 million as at September 30, 2023, an increase of US$463 million, net of a US$64 million increase attributed to NCI compared with December 31, 2022. Organic CSM movement was an increase of US$441 million for the nine months ended September 30, 2023 driven by the impact of new insurance business and expected movements related to finance income or expenses, partially offset by amounts recognized for service provided in year-to-date earnings and a net reduction from insurance experience. Inorganic CSM movement was an increase of US$86 million for the nine months ended September 30, 2023 largely due to changes in actuarial methods and assumptions that adjust the CSM, partially offset by the impact of markets from an increase in interest rates and unfavourable equity market performance on certain participating and variable annuity contracts, and strengthening of the U.S. dollar against Asian currencies.

Assets under management were US$118.0 billion as at September 30, 2023, an increase of US$2.9 billion or 5% compared with December 31, 2022, driven by the impact of positive equity market performance in 2023 on invested assets and segregated funds net assets, and business growth.

Business highlights – In 3Q23, we:

• launched a unified high net worth onboarding platform in Bermuda¹, Hong Kong, and Singapore, to our international brokers to deliver a consistent high touch experience for both distributors and customers by streamlining new business application, underwriting and compliance processes across our three high net worth operations;

• further automated the claims-handling process in Hong Kong to improve operational efficiency and deliver a better customer experience as we continue to leverage data to enhance our auto-adjudication engine, driving an almost twofold increase of straight-through processed claims compared with 3Q22; and

• completed the seamless data migration of more than 3 million customers in mainland China as a part of policy administration system modernization. This cloud-native solution enables scale and efficiency, and lays the foundation for improved customer, distributor and partner experience; this milestone will enable faster speed to market through collaborative product development and easier integration with our digital partners’ ecosystems.

¹ This represents our International High Net Worth business.
Canada's net income attributed to shareholders was $290 million in 3Q23 compared with net income attributed to shareholders of $853 million and transitional net income attributed to shareholders of $481 million in 3Q22. The 3Q22 transitional net income attributed to shareholders includes a charge of $372 million from IFRS 9 transitional impacts. Net income attributed to shareholders is comprised of core earnings, which were $408 million in 3Q23 compared with $391 million in 3Q22, and items excluded from core earnings, which amounted to a net gain of $118 million in 3Q23 compared with a net gain of $462 million in 3Q22. Items excluded from core earnings in 3Q22 on a transitional basis amounted to a net gain of $90 million. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 3Q23 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 3Q22. See section A2 “Profitability” above, for explanations of the items excluded from core earnings.

Core earnings in 3Q23 increased $17 million or 4% compared with 3Q22, reflecting more favourable insurance experience, business growth in Group Insurance and higher expected investment earnings due to higher yields and business growth, partially offset by an increase in the ECL provision, and an increase in the corporate tax rate enacted in 4Q22.

Year-to-date net income attributed to shareholders was $826 million in 2023 compared with a year-to-date net loss attributable to shareholders of $430 million and year-to-date transitional net income attributed to shareholders of $1,078 million in the same period of 2022. The 2022 year-to-date transitional net income includes a gain of $1,508 million from IFRS 9 transitional adjustments. Year-to-date core earnings were $1,135 million in 2023 compared with $1,091 million in the same period of 2022. The increase in year-to-date core earnings of $44 million or 4% reflected higher expected investment earnings from higher yields, more favourable insurance experience, and business growth in Group Insurance, partially offset by slower amortization of CSM on certain VFA contracts, an increase in the ECL provision and the increase in the corporate tax rate enacted in 4Q22. Items excluded from year-to-date core earnings were a net charge of $309 million in 2023 compared with a net charge of $1,521 million for the same period of 2022. Items excluded from year-to-date core earnings in 2022 on a transitional basis amounted to a net charge of $13 million. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of year-to-date core earnings to year-to-date net income (loss) attributed to shareholders for 2023, and year-to-date core earnings and year-to-date transitional net income (loss) attributed to shareholders to year-to-date net income (loss) attributed to shareholders for 2022.

---

1 Effective January 1, 2023, refinements were made to the allocations of corporate overhead and interest on surplus among segments. Prior period comparative information has been restated to reflect the changes in segment reporting.
APE sales of $431 million in 3Q23 increased by $146 million or 51% compared with 3Q22.

- Individual insurance APE sales in 3Q23 of $250 million increased $148 million or 145% compared with 3Q22, primarily due to a large affinity markets sale, partially offset by lower participating life insurance sales.
- Group insurance APE sales in 3Q23 of $135 million increased $2 million or 2% compared with 3Q22, primarily due to higher small business and mid-size sales, partially offset by lower large-case sales.
- Annuities APE sales in 3Q23 of $46 million decreased $4 million or 8% compared with 3Q22, primarily due to lower sales of segregated fund products.

Year-to-date APE sales in 2023 were $1,046 million, $37 million or 4% higher than in the same period of 2022, primarily due to a large affinity markets sale, higher small business and mid-size group insurance sales, partially offset by lower Annuities sales of segregated fund products and lower large-case Group Insurance sales.

CSM was $3,662 million as at September 30, 2023, a decrease of $13 million compared with December 31, 2022. Organic CSM movement was an increase of $25 million for the nine months ended September 30, 2023 driven by the impact of new insurance business, expected movements related to finance income or expenses, and insurance experience gains, partially offset by amounts recognized for service provided in year-to-date earnings. Inorganic CSM movement was a decrease of $38 million for the nine months ended September 30, 2023 reflecting the unfavourable impact of markets primarily related to equity market experience on certain variable annuity contracts, partially offset by changes in actuarial methods and assumptions that adjust the CSM.

Manulife Bank average net lending assets for the quarter were $25.1 billion as at September 30, 2023, up $0.4 billion or 1% compared with December 31, 2022, driven by improved retention and business growth.

Assets under management were $137.9 billion as at September 30, 2023, a decrease of $4.7 billion or 3% compared with December 31, 2022, due to lower total invested assets, primarily reflecting the impact of higher interest rates, and lower segregated funds net assets, driven by net outflows.

Business highlights – In 3Q23, we:

- announced a strategic partnership with League, a leading healthcare technology provider, to offer our group benefits members more integrated digital healthcare experiences, enabling them to connect their benefits directly with healthcare options. This partnership continues our digitization efforts to meet growing demand for more personalized digital experiences that help customers understand their health, focus on prevention, access care, and better comprehend and optimize their benefits;
- expanded our Personalized Medicine program to all Group Benefits extended healthcare plans, making this service available to more customers, while enabling them to learn about medications that best meet their needs and work with healthcare providers on customized treatment plans that can lead to better outcomes; and
- completed a successful communication campaign highlighting the ease and speed of online claims submission with our Group Benefits customers which led to a 15%-increase in Manulife Mobile app downloads, and an increase of more than 1 million claims initiated through digital channels since the beginning of the year.

### Notes:

1. See "Non-GAAP and other financial measures" below for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 2023 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 2022.

**U.S.’s net income attributed to shareholders** was $72 million in 3Q23 compared with a net loss attributed to shareholders of $447 million and transitional net income attributed to shareholders of $314 million in 3Q22. The 3Q22 transitional net income attributed to shareholders includes a gain of $761 million from IFRS 9 transitional impacts. Net income attributed to shareholders is comprised of core earnings, which were $442 million in 3Q23 compared with $437 million in 3Q22, and items excluded from core earnings, which amounted to a net charge of $370 million in 3Q23 compared with a net charge of $884 million in 3Q22. Items excluded from core earnings in 3Q22 on a transitional basis amounted to a net charge of $123 million. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 3Q23 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 3Q22. See section A2 “Profitability” above, for explanations of the items excluded from core earnings. The changes in core earnings expressed in Canadian dollars were due to the factors described below and additionally, reflected a $11 million favourable impact from the strengthening of the U.S. dollar compared with the Canadian dollar.

---

1. Effective January 1, 2023, we have made a number of changes to the composition of reporting segments to better align our financial reporting with our business strategy and operations. Our international high net worth business was reclassified from U.S. Insurance in the U.S. segment to the Asia segment to reflect the contributions of our Bermuda operations alongside the high net worth business that we report in our Singapore and Hong Kong operations. Refinements were made to the allocations of corporate overhead and interest on surplus among segments. Prior period comparative information has been restated to reflect the changes in segment reporting.
Expressed in U.S. dollars, the functional currency of the segment, net income attributed to shareholders was US$53 million in 3Q23 compared with a net loss attributed to shareholders of US$342 million and transitional net income attributed to shareholders of US$241 million in 3Q22. Core earnings were US$329 million in 3Q23 compared with US$335 million in 3Q22 and items excluded from core earnings were a net charge of US$276 million in 3Q23 compared with a net charge of US$677 million in 3Q22. Items excluded from core earnings on a transitional basis in 3Q22 were a net charge of US$94 million.

Core earnings decreased US$6 million or 2% compared with 3Q22 reflecting an increase in the ECL provision primarily related to electric utility bonds and private placements compared with a reduction in the provision in 3Q22, and lower CSM amortization reflecting the impact of the annual review of actuarial methods and assumptions as well as slower CSM amortization on certain VFA contracts. These impacts were partially offset by an increase in expected investment earnings driven by higher investment yields and business growth and improved insurance experience primarily due to net favourable claims experience. Net favourable claims experience included in core earnings was primarily due to favourable life experience, partially offset by unfavourable long-term care claims experience.

Year-to-date net income attributed to shareholders was US$327 million in 2023 compared with a net loss attributable to shareholders of US$1,776 million and transitional net income attributed to shareholders of US$1,218 million in the same period of 2022. The 2022 year-to-date transitional net income includes a gain of US$2,994 million from IFRS 9 transitional adjustments. Year-to-date core earnings were US$955 million in 2023 compared with US$901 million in the same period of 2022. Year-to-date core earnings increased US$54 million mainly due to increased expected investment earnings due to higher investment yields and business growth as well as improved, although unfavourable, insurance experience primarily driven by the non-recurrence of excess mortality claims related to COVID-19 in the first quarter of 2022. These impacts were partially offset by an increase in the ECL provision in 2023 primarily related to commercial mortgages, electric utility bonds and private placements compared with a reduction in the provision in 2022, and lower CSM recognized into earnings due to a slower CSM amortization on certain VFA contracts, the reinsurance of a significant portion of the variable annuities block in the prior year, and the impact of the annual review of actuarial methods and assumptions. Long-term care experience included in core earnings was more unfavourable. Items excluded from year-to-date core earnings were a net charge of US$628 million in 2023 compared with a net charge of US$2,677 million for the same period of 2022. Items excluded from core earnings in 2022 on a transitional basis amounted to a net gain of US$317 million. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of year-to-date core earnings to year-to-date net income (loss) attributed to shareholders for 2023 and year-to-date core earnings and year-to-date transitional net income (loss) to shareholders to year-to-date net income (loss) attributed to shareholders for 2022. Expressed in Canadian dollars, year-to-date core earnings reflected a $59 million favourable impact of changes in foreign currency exchange rates versus the Canadian dollar.

APE sales in 3Q23 of US$79 million decreased 31% compared with 3Q22 due to the adverse impact of higher short-term interest rates on accumulation insurance products, particularly for our affluent customers. Year-to-date APE sales in 2023 of US$275 million decreased 23% compared with the same period of 2022 due to the reason outlined above. APE sales of products with the John Hancock Vitality PLUS feature represented 71% and 73% of overall U.S. sales in 3Q23 and year-to-date 2023, respectively, compared with 74% and 72% in the same periods of 2022.

CSM was US$2,695 million as at September 30, 2023, a decrease of US$358 million compared with December 31, 2022. Organic CSM movement was an increase of US$26 million for the nine months ended September 30, 2023 driven by the impact of new insurance business and expected movements related to finance income or expenses, partially offset by amounts recognized for service provided in year-to-date earnings and a net reduction from insurance experience. The net unfavourable insurance experience in organic CSM movement was due to unfavourable life insurance lapse and claims experience partially offset by favourable long-term care and annuities claims and lapse experience. Inorganic CSM movement was a decrease of US$384 million for the nine months ended September 30, 2023 mainly due to changes in actuarial methods and assumptions primarily related to life insurance, partially offset by favourable market impacts from equity market experience and higher interest rates primarily on variable annuity contracts.
Assets under management were US$143.2 billion as at September 30, 2023, a decrease of US$3.8 billion or 3% compared with December 31, 2022. The decrease in total invested assets and segregated funds net assets was primarily due to the impact from markets, reflecting changes in interest rates and equity markets.

Business highlights – In 3Q23, we:

- expanded our reach into the employer market by introducing a Premier Benefit Indexed Universal Life product. This permanent life insurance product, available through the workplace, offers a streamlined digital process for employees to purchase individual coverage and includes our John Hancock Vitality PLUS feature;
- launched a distribution relationship with JPMorgan Chase & Co. enabling new sales of our suite of products, including our John Hancock Vitality program, through its network of more than 6,900 advisors;
- furthered our mission of helping customers live longer, healthier, better lives and differentiating ourselves from other life insurance carriers by hosting ‘Longer.Healthier.Better.’ – the first longevity symposium in the industry – that brought together 250 life insurance brokers, leadership from reinsurance companies, media, and local government officials to give them a first-hand look at the innovations and science shaping the future of longevity; and
- continued to optimize our digital capabilities to create a more seamless, digital customer experience through the launch of single sign-on for John Hancock Vitality customers between John Hancock Life and Vitality websites, improvement of the website navigation of our producer portal, and enhancement of the interactive voice response authentication enabling 31% of inbound calls to be completed with no human interaction in the quarter.

(1) See “Non-GAAP and other financial measures” below for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 2023 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 2022. Transitional impacts in Global WAM are not material.

(2) This item is a non-GAAP financial measure. See “Non-GAAP and other financial measures” below for more information.

(3) This item is a non-GAAP ratio. See “Non-GAAP and other financial measures” below for more information.

1 Effective January 1, 2023, we have made a number of changes to the composition of reporting segments to better align our financial reporting with our business strategy and operations. Our investment in the start-up capital of segregated and mutual funds, and investment-related revenue and expense were reclassified from the Corporate and Other segment to the Global WAM segment to more closely align with Global WAM’s management practices. Refinements were made to the allocations of corporate overhead and interest on surplus among segments. Prior period comparative information has been restated to reflect the changes in segment reporting.
Global WAM’s net income attributed to shareholders was $318 million in 3Q23 compared with $287 million in 3Q22. Net income attributed to shareholders is comprised of core earnings, which were $361 million in 3Q23 compared with $354 million in 3Q22, and items excluded from core earnings, which amounted to a net charge of $43 million in 3Q23 compared with a net charge of $67 million in 3Q22. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 3Q23 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 3Q22. See section A2 “Profitability” above, for explanations of the items excluded from core earnings.

Core earnings in 3Q23 were in line with 3Q22, driven by an increase in net fee income from higher average AUMA and higher performance fees in Institutional Asset Management, offset by an increase in performance-related costs.

Core EBITDA was $480 million in 3Q23, an increase of 1% compared with 3Q22, driven by similar factors as noted above for core earnings. Core EBITDA margin was 26.9% in 3Q23, a decrease of 200 basis points compared with 3Q22, driven by an increase in performance-related costs. See section E3 “Non-GAAP and other financial measures” below, for additional information on core EBITDA and core EBITDA margin.

Year-to-date net income attributed to shareholders was $932 million in 2023 compared with $720 million in the same period of 2022 and year-to-date core earnings were $968 million in 2023 compared with $1,025 million in the same period of 2022. The decrease in year-to-date core earnings of $57 million or 8% reflected an increase in performance-related costs and lower earnings from seed capital investments due to repatriations. This was partially offset by an increase in net fee income from higher fee spreads and higher performance fees in Institutional Asset Management. Items excluded from year-to-date core earnings were a net charge of $36 million in 2023 compared with a net charge of $305 million in the same period of 2022. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of year-to-date core earnings to year-to-date net income (loss) attributed to shareholders for 2023 and year-to-date core earnings and year-to-date transitional net income (loss) attributed to shareholders to year-to-date net income (loss) attributed to shareholders for 2022.

Year-to-date core EBITDA was $1,297 million in 2023 compared with $1,384 million in the same period of 2022. The decrease in year-to-date core EBITDA of $87 million or 9% was driven by similar factors as noted above for year-to-date core earnings. Year-to-date core EBITDA margin was 24.7% in 2023 compared with 28.4% in the same period of 2022. The decrease of 370 basis points was mainly driven by an increase in performance-related costs. See section E3 “Non-GAAP and other financial measures” below, for additional information on year-to-date core EBITDA and year-to-date core EBITDA margin.

Gross flows were $34.3 billion in 3Q23, an increase of 5%\(^1\) compared with 3Q22. By business line, the results were:

- Retirement gross flows in 3Q23 were $13.6 billion, an increase of 4% compared with 3Q22, driven by growth in member contributions.
- Retail gross flows in 3Q23 were $14.8 billion, a decrease of 5% compared with 3Q22, reflecting lower demand as investors continued to favour short-term cash and money market instruments amid market volatility and higher interest rates. This was partially offset by higher gross flows in mainland China that include the impact of acquiring full ownership of MFM in 4Q22 and the launch of our Global Semiconductors strategy in Japan.
- Institutional Asset Management gross flows in 3Q23 were $5.8 billion, an increase of 56% compared with 3Q22, primarily driven by higher sales in mainland China and the impact of acquiring full ownership interest of MFM as mentioned above, as well as higher sales in equity, fixed income, and agriculture mandates.

\(^1\) Percentage growth / declines in gross flows is stated on a constant exchange rate basis.
Year-to-date gross flows were $108.2 billion in 2023, in line with the same period of 2022. Higher retail and institutional sales in mainland China from acquiring full ownership interest of MFM, and new institutional product launches totaling $1.6 billion in the first quarter of 2023, coupled with higher sales in fixed income mandates were offset by lower retail sales from lower investor demand as noted above.

Net outflows were $0.8 billion in 3Q23 compared with net inflows of $3.0 billion in 3Q22. By business line, the results were:

- Net outflows in Retirement were $3.4 billion in 3Q23 compared with net inflows of $1.4 billion in 3Q22 driven entirely by a large-case pension plan redemption in the U.S.
- Net outflows in Retail were $0.2 billion in 3Q23 compared with net inflows of $1.0 billion in 3Q22, reflecting lower demand as investors continued to favour short-term cash and money market instruments amid market volatility and higher interest rates. This was partially offset by the launch of the new strategy in Japan and higher net inflows in mainland China from acquiring full ownership of MFM in 4Q22.
- Net inflows in Institutional Asset Management were $2.8 billion in 3Q23 compared with inflows of $0.6 billion in 3Q22, driven by higher net flows in fixed income mandates, and higher sales of equity and agriculture mandates, as well as the impact of the MFM acquisition.

Year-to-date net inflows were $5.8 billion in 2023, compared with $11.5 billion in the same period of 2022. The decrease was primarily due to higher pension plan redemptions in Retirement, and lower Retail sales from lower investor demand. This was partially offset by lower mutual fund redemption rates, and the launch of new products in Institutional Asset Management in 2023 as well as the impact of the MFM acquisition as mentioned above.

Assets under management and administration of $806.7 billion as at September 30, 2023 increased 4% compared with December 31, 2022. The increase was driven by the favourable year-to-date impact of markets and net inflows. As at September 30, 2023, Global WAM also managed $201.4 billion in assets for the Company’s non-WAM reporting segments. Including those managed assets, AUMA managed by Global WAM1 was $1,008.2 billion compared with $984.3 billion as at December 31, 2022.

Segregated funds net assets were $233.9 billion as at September 30, 2023, 4% higher compared with December 31, 2022 on an actual exchange rate basis, driven by the favourable year-to-date impact of markets.

Business highlights – In 3Q23, we:

- continued to fulfil investor needs for wealth solutions through the expansion of our offerings with the launch of the Global Semiconductors strategy in Japan which garnered more than $0.7 billion in net flows during the quarter, as well as the launch of a Municipal Opportunities Separately Managed Account in U.S. Retail, built on our mutual fund of the same name; and
- accelerated customer adoption of digital applications in Canada Retirement through our “Say Goodbye to Paper” campaign which contributed to a 165% increase in members converting to e-statements over the 3-month campaign period and an increase in satisfaction in their digital experience over the prior quarter.

</table>

1. See “Non-GAAP and other financial measures” below for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 2023 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 2022.

**Corporate and Other** is composed of investment performance on assets backing capital, net of amounts allocated to operating segments; financing costs; costs incurred by the corporate office related to shareholder activities (not allocated to the operating segments); our Property and Casualty (“P&C”) Reinsurance business; as well as our run-off reinsurance operation including variable annuities and accident and health. In addition, for segment reporting purposes, consolidations and eliminations of transactions between operating segments are also included in Corporate and Other earnings.

Corporate and Other reported net income attributed to shareholders of $249 million in 3Q23 compared with a net loss attributed to shareholders of $482 million and transitional net loss attributed to shareholders of $481 million for 3Q22. The 3Q22 transitional net loss includes a gain of $1 million from IFRS 9 transitional impacts. Net income attributed to shareholders is comprised of core earnings, which was $10 million in 3Q23 compared with a core loss of $230 million in 3Q22, and the items excluded from core earnings which amounted to a net gain of $239 million in 3Q23 compared with a net charge of $252 million in 3Q22. Items excluded from core earnings in 3Q22 on a transitional basis amounted to a charge of $251 million. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of quarterly core earnings to net income (loss) attributed to shareholders for 3Q23 and quarterly core earnings and transitional net income (loss) attributed to shareholders to net income (loss) attributed to shareholders for 3Q22. See section A2 “Profitability” above, for explanations of the items excluded from core earnings.

The $240 million increase in core earnings was primarily related to the non-recurrence of a $256 million charge in our P&C Reinsurance business for estimated losses relating to Hurricane Ian in 3Q22 and higher yields on debt instruments, net of higher cost of debt financing. These items were partially offset by higher core expenses due to higher performance-related costs as well as investments in technology.

Year-to-date net income attributed to shareholders was $512 million in 2023 compared with a net loss attributable to shareholders of $1,234 million and a transitional net loss attributed to shareholders of $1,236 million in the same period of 2022. The year-to-date transitional net loss attributed to shareholders in 2022 includes a charge of $2 million from IFRS 9 transitional adjustments. The year-to-date core earnings was $39 million in 2023 compared with a core loss of $332 million in the same period of 2022. The increase in the year-to-date core earnings of $371 million was primarily driven by similar reasons mentioned above. Items excluded from the year-to-date core earnings were a net gain of $473 million in 2023 compared with a net charge of $902 million in the same period of 2022. Items excluded from year-to-date core earnings in 2022 on a transitional basis amounted to a net charge of $904 million. See section E3 “Non-GAAP and other financial measures” below, for a reconciliation of year-to-date core earnings to year-to-date net income (loss) attributed to shareholders for 2023 and year-to-date core earnings and year-to-date transitional net income (loss) attributed to shareholders to year-to-date net income (loss) attributed to shareholders for 2022.

---

1 Effective January 1, 2023, we have made a number of changes to the composition of reporting segments to better align our financial reporting with our business strategy and operations. Our investment in the start-up capital of segregated and mutual funds, and investment-related revenue and expense were reclassified from the Corporate and Other segment to the Global WAM segment to more closely align with Global WAM’s management practices. Refinements were made to the allocations of corporate overhead and interest on surplus among segments. Prior period comparative information has been restated to reflect the changes in segment reporting.
C RISK MANAGEMENT AND RISK FACTORS UPDATE

This section provides an update to our risk management practices and risk factors outlined in the 2022 MD&A. Text and tables in this section of the MD&A represent our disclosure on insurance, market, and liquidity risk in accordance with IFRS 7 “Financial Instruments – Disclosures” and/or IFRS 17 “Insurance Contracts”. Disclosures in accordance with IFRS 7 and/or IFRS 17 are identified by a vertical line in the left margin of each page. The identified text and tables represent an integral part of our unaudited Interim Consolidated Financial Statements.

C1 Variable annuity and segregated fund guarantees

As described in the MD&A in our 2022 Annual Report, guarantees on variable annuity products and segregated funds may include one or more of death, maturity, income and withdrawal guarantees. Variable annuity and segregated fund guarantees are contingent and only payable upon the occurrence of the relevant event, if fund values at that time are below guarantee values. Depending on future equity market levels, liabilities on current in-force business would be due primarily in the period from 2023 to 2043.

We seek to mitigate a portion of the risks embedded in our retained (i.e. net of reinsurance) variable annuity and segregated fund guarantee business through the combination of our dynamic and macro hedging strategies (see section C3 “Publicly traded equity performance risk” below).

The table below shows selected information regarding the Company’s variable annuity and segregated fund investment-related guarantees gross and net of reinsurance.

<table>

</tr>
</tbody>
</table>

(1) Guarantee Value and Net Amount at Risk in respect of guaranteed minimum withdrawal business in Canada and the U.S. reflect the time value of money of these claims.

(2) Amount at risk (in-the-money amount) is the excess of guarantee values over fund values on all policies where the guarantee value exceeds the fund value. For guaranteed minimum death benefit, the amount at risk is defined as the current guaranteed minimum death benefit in excess of the current account balance and assumes that all claims are immediately payable. In practice, guaranteed death benefits are contingent and only payable upon the eventual death of policyholders if fund values remain below guarantee values. For guaranteed minimum withdrawal benefit, the amount at risk assumes that the benefit is paid as a lifetime annuity commencing at the earliest contractual income start age. These benefits are also contingent and only payable at scheduled maturity/income start dates in the future, if the policyholders are still living and have not terminated their policies and fund values remain below guarantee values. For all guarantees, the amount at risk is floored at zero at the single contract level.

(3) The amount at risk of reinsurance at September 30, 2023 was $3,467 million (December 31, 2022 – $3,829 million) of which: US$601 million (December 31, 2022 – US$737 million) was on our U.S. business, $2,105 million (December 31, 2022 – $2,154 million) was on our Canadian business, US$183 million (December 31, 2022 – US$275 million) was on our Japan business and US$223 million (December 31, 2022 – US$224 million) was related to Asia (other than Japan) and our run-off reinsurance business.

(4) Where a policy includes both living and death benefits, the guarantee in excess of the living benefit is included in the death benefit category as outlined in footnote 5.

(5) Death benefits include standalone guarantees and guarantees in excess of living benefit guarantees where both death and living benefits are provided on a policy.
C2 Caution related to sensitivities

In this document, we provide sensitivities and risk exposure measures for certain risks. These include sensitivities due to specific changes in market prices and interest rate levels projected using internal models as at a specific date, and are measured relative to a starting level reflecting the Company's assets and liabilities at that date. The risk exposures measure the impact of changing one factor at a time and assume that all other factors remain unchanged. Actual results can differ significantly from these estimates for a variety of reasons including the interaction among these factors when more than one changes; changes in liabilities from updates to non-economic assumptions, changes in business mix, effective tax rates and other market factors; and the general limitations of our internal models. For these reasons, the sensitivities should only be viewed as directional estimates of the underlying sensitivities for the respective factors based on the assumptions outlined below. Given the nature of these calculations, we cannot provide assurance that the actual impact on contractual service margin, net income attributed to shareholders, other comprehensive income attributed to shareholders, and total comprehensive income attributed to shareholders or on MLI’s LICAT ratio will be as indicated.

Market movements affect LICAT capital sensitivities through the available capital, surplus allowance and required capital components of the regulatory capital framework. The LICAT available capital component is primarily affected by total comprehensive income and the CSM.

C3 Publicly traded equity performance risk

As outlined in our 2022 Annual Report, we have net exposure to equity risk through asset and liability mismatches; our variable annuity guarantee dynamic hedging strategy is not designed to completely offset the sensitivity of insurance contract liabilities to all risks associated with the guarantees embedded in these products. The macro hedging strategy is designed to mitigate public equity risk arising from variable annuity guarantees not dynamically hedged and from other unhedged exposures in our insurance contracts (see page 60 of our 2022 Annual Report).

Changes in public equity prices may impact other items including, but not limited to, asset-based fees earned on assets under management and administration or policyholder account value, and estimated profits and amortization of deferred policy acquisition and other costs. These items are not hedged.

The tables below include the potential impacts from an immediate 10%, 20% and 30% change in market values of publicly traded equities on contractual service margin, net income attributed to shareholders, other comprehensive income attributed to shareholders, and total comprehensive income attributed to shareholders. The potential impact is shown after taking into account the impact of the change in markets on the hedge assets. While we cannot reliably estimate the amount of the change in dynamically hedged variable annuity guarantee liabilities that will not be offset by the change in the dynamic hedge assets, we make certain assumptions for the purposes of estimating the impact on net income attributed to shareholders.

This estimate assumes that the performance of the dynamic hedging program would not completely offset the gain/loss from the dynamically hedged variable annuity guarantee liabilities. It assumes that the hedge assets are based on the actual position at the period end, and that equity hedges in the dynamic program offset 95% of the hedged variable annuity liability movement that occur as a result of market changes.

It is also important to note that these estimates are illustrative, and that the dynamic and macro hedging programs may underperform these estimates, particularly during periods of high realized volatility and/or periods where both interest rates and equity market movements are unfavourable. The adoption of IFRS 17 did not change the method or assumptions used for deriving sensitivity information.

Changes in equity markets impact our available and required components of the LICAT ratio. The second set of tables shows the potential impact to MLI’s LICAT ratio resulting from changes in public equity market values.
### Potential immediate impact on net income attributed to shareholders arising from changes to public equity returns

</tbody>
</table>

\(^{(1)}\) See “Caution related to sensitivities” above.

\(^{(2)}\) For variable annuity contracts measured under VFA the impact of financial risk and changes in interest rates adjusts CSM, unless the risk mitigation option applies. The Company has elected to apply risk mitigation and therefore a portion of the impact is reported in net income attributed to shareholders instead of adjusting the CSM. If the CSM for a group of variable annuity contracts is exhausted the full impact is reported in net income attributed to shareholders.

\(^{(3)}\) This impact for general fund equity investments includes general fund investments supporting our insurance contract liabilities, investment in seed money investments (in segregated and mutual funds made by Global WAM segment) and the impact on insurance contract liabilities related to the projected future fee income on variable universal life and other unit linked products. The impact does not include any potential impact on public equity weightings. The participating policy funds are largely self-supporting and generate no material impact on net income attributed to shareholders as a result of changes in equity markets.

\(^{(4)}\) Includes the impact of assumed rebalancing of equity hedges in the macro and dynamic hedging program. The impact of dynamic hedge represents the impact of equity hedges offsetting 95% of the dynamically hedged variable annuity liability movement that occurs as a result of market changes, but does not include any impact in respect of other sources of hedge accounting ineffectiveness (e.g. fund tracking, realized volatility and equity, interest rate correlations different from expected among other factors).
Potential immediate impact on contractual service margin, other comprehensive income to shareholders, total comprehensive income to shareholders and MLI’s LICAT ratio from changes to public equity market values (1),(2),(3)

(1) See “Caution related to sensitivities” above.
(2) This estimate assumes that the performance of the dynamic hedging program would not completely offset the gain/loss from the dynamically hedged variable annuity guarantee liabilities. It assumes that the hedge assets are based on the actual position at the period end, and that equity hedges in the dynamic program offset 95% of the hedged variable annuity liability movement that occur as a result of market changes.
(3) The Office of the Superintendent of Financial Institutions (“OSFI”) rules for segregated fund guarantees reflect full capital impacts of shocks over 20 quarters within a prescribed range. As such, the deterioration in equity markets could lead to further increases in capital requirements after the initial shock.
(4) For variable annuity contracts measured under VFA the impact of financial risk and changes in interest rates adjusts CSM, unless the risk mitigation option applies. The Company has elected to apply risk mitigation and therefore a portion of the impact is reported in net income attributed to shareholders instead of adjusting the CSM. If the CSM for a group of variable annuity contracts is exhausted the full impact is reported in net income attributed to shareholders.
(5) LICAT capital sensitivity is based on the 2023 LICAT guideline that became effective January 1, 2023.

C4 Interest rate and spread risk sensitivities and exposure measures

As at September 30, 2023, we estimated the sensitivity of our net income attributed to shareholders to a 50 basis point parallel decline in interest rates to be a benefit of $100 million, and to a 50 basis point parallel increase in interest rates to be a charge of $100 million.

The table below includes the potential impacts from a 50 basis point parallel move in interest rates on contractual service margin, net income attributed to shareholders, other comprehensive income attributed to shareholders, and total comprehensive income attributed to shareholders. This includes a change in current government, swap and corporate rates for all maturities across all markets with no change in credit spreads between government, swap and corporate rates. Also shown separately are the potential impacts from a 50 basis point parallel move in corporate spreads and a 20 basis point parallel move in swap spreads. The impacts reflect the net impact of movements in asset values in liability and surplus segments and movements in the present value of cash flows for insurance contracts including those with cash flows that vary with the returns of underlying items where the present value is measured by stochastic modelling. The adoption of IFRS 17 did not change the method or assumptions used for deriving sensitivity information.
The disclosed interest rate sensitivities reflect the accounting designations of our financial assets and corresponding insurance contract liabilities. In most cases these assets and liabilities are designated as fair value through other comprehensive income (“FVOCI”) and as a result, impacts from changes to interest rates are largely in other comprehensive income. There are also changes in interest rates that impact the CSM for VFA contracts that relate to amounts that are not passed through to policyholders. In addition, changes in interest rates impacts net income as it relates to derivatives not in hedge accounting relationships and on VFA contracts where the CSM has been exhausted.

The disclosed interest rate sensitivities assume no hedge accounting ineffectiveness, as our hedge accounting programs are optimized for parallel movements in interest rates, leading to immaterial net income impacts under these shocks. However, the actual hedge accounting ineffectiveness is sensitive to non-parallel interest rate movements and will depend on the shape and magnitude of the interest rate movements which could lead to variations in the impact to net income attributed to shareholders.

Our sensitivities vary across all regions in which we operate, and the impacts of yield curve changes will vary depending upon the geography where the change occurs. Furthermore, the impacts from non-parallel movements may be materially different from the estimated impacts of parallel movements.

The interest rate and spread risk sensitivities are determined in isolation of each other and therefore do not reflect the combined impact of changes in government rates and credit spreads between government, swap and corporate rates occurring simultaneously. As a result, the impact of the summation of each individual sensitivity may be materially different from the impact of sensitivities to simultaneous changes in interest rate and spread risk.

The potential impacts also do not take into account other potential effects of changes in interest rate levels, for example, contractual service margin at recognition on the sale of new business or lower interest earned on future fixed income asset purchases.

The impacts do not reflect any potential effect of changing interest rates on the value of our ALDA. Rising interest rates could negatively impact the value of our ALDA (see “Critical Actuarial and Accounting Policies – Fair Value of Invested Assets”, on page 96 of our 2022 Annual Report). More information on ALDA can be found under the section C5 “Alternative long-duration asset performance risk”.

A reduction in interest rates results in a neutral impact to the LICAT ratio while a rise in interest rates results in a small improvement to the LICAT ratio. This reflects the sum of the impacts on total comprehensive income, the LICAT adjustments to earnings for the CSM and the surplus allowance.
Potential impacts on contractual service margin, net income attributed to shareholders, other comprehensive income attributed to shareholders, and total comprehensive income attributed to shareholders of an immediate parallel change in interest rates, corporate spreads or swap spreads relative to current rates\(^{(1),(2),(3),(4),(5)}\)

\(^{(1)}\) See “Caution related to sensitivities” above.
\(^{(2)}\) Includes guaranteed insurance and annuity products, including variable annuity contracts as well as adjustable benefit products where benefits are generally adjusted as interest rates and investment returns change, a portion of which have minimum credited rate guarantees. For adjustable benefit products subject to minimum rate guarantees, the sensitivities are based on the assumption that credited rates will be floored at the minimum.

Swap spreads remain at low levels, and if they were to rise, this could generate material changes to net income attributed to shareholders.

Potential impact on MLI’s LICAT ratio of an immediate parallel change in interest rates, corporate spreads or swap spreads relative to current rates\(^{(1),(2),(3),(4),(5)}\)

\(^{(1)}\) See “Caution related to sensitivities” above.
\(^{(2)}\) Estimates include changes to the net actuarial gains/losses with respect to the Company’s pension obligations as a result of changes in interest rates.
\(^{(3)}\) Includes guaranteed insurance and annuity products, including variable annuity contracts as well as adjustable benefit products where benefits are generally adjusted as interest rates and investment returns change, a portion of which have minimum credited rate guarantees. For adjustable benefit products subject to minimum rate guarantees, the sensitivities are based on the assumption that credited rates will be floored at the minimum.
\(^{(4)}\) LICAT impacts presented for corporate spreads reflect the impact of anticipated scenario switches.

LICAT Scenario Switch

When interest rates change past a certain threshold, reflecting the combined movement in risk-free rates and corporate spreads, a different prescribed interest rate stress scenario needs to be taken into account in the LICAT ratio calculation in accordance with OSFI’s LICAT guideline.

The LICAT guideline specifies four stress scenarios for interest rates and prescribes the methodology to determine the most adverse scenario to apply for each LICAT geographic region\(^{1}\) based on current market inputs and the Company’s balance sheet.

\(^{1}\) LICAT geographic locations to determine the most adverse scenario include North America, the United Kingdom, Europe, Japan, and Other Region.
With the current level of interest rates in 3Q23, the probability of a scenario switch that could materially impact our LICAT ratio is low. Should a scenario switch be triggered in a LICAT geographic region, the full impact would be reflected immediately for non-participating products while the impact for participating products would be reflected over six quarters using a rolling average of interest rate risk capital, in line with the smoothing approach prescribed in the LICAT guideline. The LICAT interest rate, corporate spread and swap spread sensitivities presented above reflect the impact of scenario switches, if any, for each disclosed sensitivity.

The level of interest rates and corporate spreads that would trigger a switch in the scenarios is dependent on market conditions and movements in the Company’s asset and liability position. The scenario switch, if triggered, could reverse in response to subsequent changes in interest rates and/or corporate spreads.

C5 Alternative long-duration asset performance risk

The following table shows the potential impact on contractual service margin, net income attributed to shareholders, other comprehensive income attributed to shareholders, and total comprehensive income attributed to shareholders resulting from an immediate 10% change in market values of ALDA. The adoption of IFRS 17 did not change the method or assumptions used for deriving sensitivity information.

ALDA includes commercial real estate, timber and farmland real estate, infrastructure, and private equities, some of which relate to energy.

The impacts do not reflect any future potential changes to non-fixed income return volatility. Refer to “C3 Publicly traded equity performance risk” for more details.

C6 Foreign exchange risk sensitivities and exposure measures

We generally match the currency of our assets with the currency of the insurance and investment contract liabilities they support, with the objective of mitigating risk of loss arising from foreign exchange rate changes. As at December 31, 2022, we did not have a material unmatched currency exposure.

---

1 See “Caution regarding forward-looking statements” below.
2 Energy includes Oil & Gas equity interests related to upstream and midstream assets, and Energy Transition private equity interests in areas supportive of the transition to lower carbon forms of energy, such as wind, solar, batteries, magnets, etc.
The following table shows the potential impact on core earnings of a 10% change in the value of the Canadian dollar relative to our other key operating currencies. Note that the impact of foreign currency exchange rates on items excluded from core earnings does not provide relevant information given the nature of these items.

Potential impact on core earnings of changes in foreign exchange rates\(^{(1),(2)}\)

<td>40</td>
</tr>
</tbody>
</table>

\(^{(1)}\) This item is a non-GAAP financial measure. See “Non-GAAP and Other Financial Measures” below for more information.

\(^{(2)}\) See “Caution Related to Sensitivities” above.

LICAT regulatory ratios are also sensitive to the fluctuations in the Canadian dollar relative to our other key operating currencies. The direction and materiality of this sensitivity varies across various capital metrics.

C7  Credit risk exposure measures

We use the ECL impairment allowance model in accordance with IFRS to establish and maintain allowances on our debt instruments measured at FVOCI or amortized cost. ECL allowances are measured on a probability-weighted basis, based on four macroeconomic scenarios, and incorporate past events, current market conditions, and reasonable supportable information about future economic conditions.

We measure ECL allowances using a three-stage approach. We recognize the credit losses expected to result from defaults occurring within 12 months of the reporting date for financial instruments which have not experienced a significant increase in credit risk (Stage 1). Full lifetime ECLs are recognized following a significant increase in credit risk since original recognition or having become 30 days in arrears in principal or interest payments (Stage 2) and when financial instruments are considered credit-impaired (Stage 3). Interest income on Stage 3 financial instruments is determined based on the carrying amount of the asset, net of any credit loss allowance.

For more information on ECL, refer to note 25 of our Consolidated Financial Statements for the year ended December 31, 2022.

C8  Risk factors – strategic risk from changes in tax laws\(^{1}\)

As noted in “Risk Management and Risk Factors – Strategic Risk Factors” in the MD&A in our 2022 Annual Report, we outlined risk factors that could impact our financial plans and ability to implement our business strategy. The macro-economic environment can be significantly impacted by the actions of both the government sector, including central banks, and the private sector. Changes in tax laws, tax regulations, or interpretations of such laws or regulations could make some of our products less attractive to consumers, could increase our corporate taxes or cause us to change the value of our deferred tax assets and liabilities as well as our tax assumptions included in the valuation of our policy liabilities. This could have a material adverse effect on our business, results of operations and financial condition.

- In 2021, 136 of the 140 members of the Organization for Economic Co-Operation and Development ("OECD") / G20 Inclusive Framework agreed on a two-pillar solution to address tax challenges from the digital economy, and to close the gaps in international tax systems. These include a new approach to allocating certain profits of multinational entities amongst countries and a global minimum income tax rate of 15%. On July 12, 2023, the Canadian government reaffirmed its commitment to the two-pillar solution and the target date of December 31, 2023 for implementation of the Pillar 2 global minimum tax. This would first apply to the Company’s 2024 fiscal year if enacted on this timeline. The Company is closely monitoring developments and potential impacts and, in particular, for issues unique to the insurance industry. If enacted, we expect an increase in the effective tax rate, pending further details on timing and specific implementation in both Canada and other affected countries.

\(^{1}\) See “Caution regarding forward-looking statements” below.
Canada’s 2023 Budget statement proposed to deny financial institutions of the traditional tax deduction of dividends received on shares of Canadian corporations when such shares are held as mark-to-market property. The affected property is a small component of the investment portfolio that supports the Company’s business. Should this rule be enacted as proposed, the Company would expect its tax expense on investment income to increase starting in 2024, though not significantly. The resulting lower net investment income would also reduce the value of certain in-force insurance policies and put pressure on policy pricing going forward.

D  CRITICAL ACTUARIAL AND ACCOUNTING POLICIES

Disclosures in accordance with IFRS 7 and/or IFRS 17 are identified by a vertical line in the left margin of each page. The identified text and tables represent an integral part of our unaudited Interim Consolidated Financial Statements.

D1  Critical actuarial and accounting policies

Our significant accounting policies are described in notes 1 and 25 to our Consolidated Financial Statements for the year ended December 31, 2022. The critical actuarial policies and estimation processes relating to the determination of insurance and investment contract liabilities are described in notes 5 and 6 of our unaudited Interim Consolidated Financial Statements for the three and nine months ended September 30, 2023. The critical accounting policies and estimation processes relating to the assessment of control over other entities for consolidation, estimation of fair value of invested assets, evaluation of invested asset impairment under IAS 39, appropriate accounting for derivative financial instruments under IAS 39, determination of pension and other post-employment benefit obligations and expenses, accounting for income taxes and uncertain tax positions and valuation and impairment of goodwill and intangible assets are described starting on page 96 of our 2022 Annual Report. The critical accounting policies and estimation processes relating to the evaluation of invested asset impairment and appropriate accounting for derivative financial instruments under IFRS 9 are described starting on page 222 of our 2022 Annual Report.

D2  Actuarial methods and assumptions

2023 Review of Actuarial Methods and Assumptions

A comprehensive review of actuarial methods and assumptions is performed annually. The review is designed to reduce the Company’s exposure to uncertainty by ensuring assumptions for liability risks remain appropriate. This is accomplished by monitoring experience and updating assumptions that represent a best estimate of expected future experience, and margins that are appropriate for the risks assumed. While the assumptions selected represent the Company’s best estimates and assessment of risk, the ongoing monitoring of experience and changes in the economic environment are likely to result in future changes to the actuarial assumptions, which could materially impact the insurance contract liabilities.

The completion of the 2023 annual review of actuarial methods and assumptions resulted in a decrease in pre-tax fulfilment cash flows of $347 million. These changes resulted in an increase in pre-tax net income attributed to shareholders of $27 million (a decrease of $14 million post-tax), an increase in pre-tax net income attributed to participating policyholders of $58 million ($74 million post-tax), an increase in CSM of $116 million, and an increase in pre-tax other comprehensive income of $146 million ($110 million post-tax).

Since the beginning of 2020, some lines of business have seen impacts to mortality and policyholder behaviour driven by the COVID-19 pandemic. Given the long-term nature of our assumptions, our 2023 experience studies have excluded experience that was materially impacted by COVID-19 as this is not seen to be indicative of the levels of actual future claims or lapses.

---

1 Fulfilment cash flows include an estimate of future cash flows; an adjustment to reflect the time value of money and the financial risk related to future cash flows if not included in the estimate of future cash flows; and a risk adjustment for non-financial risk. Additional information on fulfilment cash flows can be found in note 5 of our unaudited Interim Consolidated Financial Statements for the three and nine months ended September 30, 2023.

Canada variable annuity product review

The review of our variable annuity products in Canada resulted in a decrease in pre-tax fulfilment cash flows of $133 million.

The decrease was driven by a reduction in investment management fees, partially offset by updates to product assumptions, including surrenders, incidence, and utilization, to reflect emerging experience.

Mortality and morbidity updates

Mortality and morbidity updates resulted in an increase in pre-tax fulfilment cash flows of $265 million.

The increase was driven by a strengthening of incidence rates for certain products in Vietnam to align with emerging experience and updates to mortality assumptions in our U.S. life insurance business to reflect industry trends, as well as emerging experience. This was partially offset by updates to morbidity assumptions for certain products in Japan to reflect actual experience.

Lapse and policyholder behaviour updates

Updates to lapses and policyholder behaviour assumptions resulted in an increase in pre-tax fulfilment cash flows of $98 million.

The increase was primarily driven by a detailed review of lapse assumptions for our universal life level cost of insurance products in Canada, which resulted in a reduction to the lapse rates to align with emerging trends.

Methodology and other updates

Methodology and other updates resulted in a decrease in pre-tax fulfilment cash flows of $577 million.

The decrease was driven by the impact of cost-of-guarantees for participating policyholders across all segments from annual updates related to parameters, dividend recalibration, and market movements during the year, as well as modelling refinements for certain products in Asia. This was partially offset by a modelling methodology update to project future premiums on our U.S. life insurance business.
Impact of changes in actuarial methods and assumptions on pre-tax fulfilment cash flows, net income attributed to shareholders, CSM and OCI by segment

The impact of changes in actuarial methods and assumptions in Canada resulted in a decrease in pre-tax fulfilment cash flows of $159 million. The decrease was driven by updates to our variable annuity product assumptions, as well as by updates to our valuation models for participating products, driven by the annual dividend recalibration, partially offset by a reduction in lapse rates on our universal life level cost of insurance products to reflect emerging trends. These changes resulted in an increase in pre-tax net income attributed to shareholders of $52 million ($37 million post-tax), an increase in CSM of $142 million, and an increase in pre-tax other comprehensive income of $2 million ($1 million post-tax).

The impact of changes in actuarial methods and assumptions in the U.S. resulted in an increase in pre-tax fulfilment cash flows of $270 million. The increase was related to our life insurance business and primarily driven by a modelling methodology update to project future premiums, as well as updates to mortality assumptions. These changes resulted in an increase in pre-tax net income attributed to shareholders of $134 million ($106 million post-tax), a decrease in CSM of $600 million, and an increase in pre-tax other comprehensive income of $196 million ($155 million post-tax).

The impact of changes in actuarial methods and assumptions in Asia resulted in a decrease in pre-tax fulfilment cash flows of $457 million. The decrease largely relates to participating products, primarily driven by model refinements, dividend recalibration updates, as well as annual updates to reflect market movements during the year. This, and the updates to morbidity assumptions on certain products in Japan, were partially offset by updates to incidence rates on certain products in Vietnam. These changes resulted in a decrease in pre-tax net income attributed to shareholders of $159 million ($157 million post-tax), an increase in CSM of $574 million, and a decrease in pre-tax other comprehensive income of $53 million ($47 million post-tax).

The impact of changes in actuarial methods and assumptions in Corporate and Other (which includes our Reinsurance businesses) resulted in a decrease in pre-tax fulfilment cash flows of $1 million. These changes resulted in no impacts to pre-tax net income attributable to shareholders or CSM, and an increase in pre-tax other comprehensive income of $1 million ($1 million post-tax).

2022 Review of Actuarial Methods and Assumptions

The completion of the 2022 annual review of actuarial methods and assumptions resulted in an increase in pre-tax fulfilment cash flows of $192 million. These changes resulted in an increase in pre-tax net income attributed to shareholders of $23 million ($26 million post-tax), a decrease in pre-tax net income attributed to participating policyholders of $26 million ($18 million post-tax), a decrease in CSM of $279 million, and an increase in pre-tax other comprehensive income of $90 million ($73 million post-tax).

Since the beginning of 2020, some lines of business have seen impacts to mortality and policyholder behaviour driven by the COVID-19 pandemic. Given the long-term nature of our assumptions, our 2022 experience studies have excluded experience that was materially impacted by COVID-19 as this is not seen to be indicative of the levels of actual future claims or lapses.

---

1 Our annual update of actuarial methods and assumptions also impacts net income attributed to participating policyholders. The total company impact can be found in the above table.

**Long-term care triennial review**

U.S. Insurance completed a comprehensive long-term care ("LTC") experience study. The review included all aspects of claim assumptions, as well as the progress on future premium rate increases. The impact of the LTC review was an increase in pre-tax fulfilment cash flows of $118 million.

The experience study showed that claim costs established in our last triennial review remain appropriate in aggregate for our older blocks of business\(^1\) supported by robust claims data on this mature block. Pre-tax fulfilment cash flows were increased for claim costs on our newer block of business\(^2\). This was driven by lower active life mortality\(^3\) supported by Company experience and a recent industry study, as well as higher utilization of benefits, which included the impact of reflecting higher inflation in the cost-of-care up to 2022. We also reviewed and updated incidence and claim termination assumptions which, on a net basis, provided a partial offset to the increase in pre-tax fulfilment cash flows on active life mortality and utilization. In addition, some policyholders are electing to reduce their benefits in lieu of paying increased premiums which resulted in a reduction in pre-tax fulfilment cash flows.

Experience continues to support the assumptions of both future morbidity and mortality improvement, resulting in no changes to these assumptions.

---

\(^1\) First generation policies issued prior to 2002.

\(^2\) Second generation policies with an average issue date of 2007 and Group policies with an average issue date of 2003.

\(^3\) The mortality rate of LTC policyholders who are currently not on claim.
As of September 30, 2022, we had received actual premium increase approvals of $2.5 billion pre-tax (US$1.9 billion pre-tax) on a present value basis since the last triennial review in 2019. This aligns with the full amount assumed in our pre-tax fulfilment cash flows at that time and demonstrates our continued strong track record of securing premium rate increases. In 2022, the review of future premium increases assumed in fulfilment cash flows resulted in a net $2.5 billion (US$1.9 billion) decrease in pre-tax fulfilment cash flows. This reflects expected future premium increases that are due to our 2022 review of morbidity, mortality, and lapse assumptions, as well as outstanding amounts from prior state filings. Premium increases averaging approximately 30% will be sought on about one-half of the business, excluding the carryover of 2019 amounts requested. Our assumptions reflect the estimated timing and amount of state approved premium increases.

**Mortality and morbidity updates**

Mortality and morbidity updates resulted in an increase in pre-tax fulfilment cash flows of $83 million, driven by updates to morbidity assumptions in Vietnam to align with experience, partially offset by a detailed review of the mortality assumptions for our Canada insurance business.

**Lapse and policyholder behaviour updates**

Updates to lapses and policyholder behaviour assumptions resulted in an increase in pre-tax fulfilment cash flows of $234 million.

We completed a detailed review of lapse assumptions for Singapore, and increased lapse rates to align with experience on our index-linked products, which reduced projected future fee income to be received on these products.

We also increased lapse rates on Canada’s term insurance products for policies approaching their renewal date, reflecting emerging experience in our study.

**Methodology and other updates**

Other updates resulted in a decrease in pre-tax fulfilment cash flows of $243 million, which included updates to discount rates and policyholder dividends on participating products, as well as various other modelling and projection updates.

**Impact of changes in actuarial methods and assumptions on pre-tax fulfilment cash flows, net income attributed to shareholders, CSM and OCI by segment**

The impact of changes in actuarial methods and assumptions in Canada resulted in an increase in pre-tax fulfilment cash flows of $22 million. The increase was driven by updates to the lapse assumptions for certain term insurance products, largely offset by updates to discount rates and policyholder dividends on participating products, as well as updates to mortality assumptions for our insurance business. These changes resulted in an increase in pre-tax net income attributed to shareholders of $64 million ($47 million post-tax), an increase in CSM of $43 million, and a decrease in pre-tax other comprehensive income of $96 million ($71 million post-tax).

The impact of changes in actuarial methods and assumptions in the U.S. resulted in an increase in pre-tax fulfilment cash flows of $108 million, driven by the triennial review of long-term care. These changes resulted in a decrease in pre-tax net income attributed to shareholders of $16 million ($12 million post-tax), a decrease in CSM of $202 million, and an increase in pre-tax other comprehensive income of $110 million ($86 million post-tax).

The impact of changes in actuarial methods and assumptions in Asia resulted in an increase in pre-tax fulfilment cash flows of $62 million. The increase was driven by updates to lapse assumptions in Singapore and morbidity updates in Vietnam, partially offset by various other modelling and projection updates. These changes resulted in a decrease in pre-tax net income attributed to shareholders of $25 million ($9 million post-tax), a decrease in CSM of $120 million, and an increase in pre-tax other comprehensive income of $76 million ($58 million post-tax).

---

1 Actual experience obtaining premium increases could be materially different than what the Company has assumed, resulting in further increases or decreases in insurance contract liabilities, which could be material.
D3  Sensitivity of earnings to changes in assumptions

The following tables present information on how reasonably possible changes in assumptions made by the Company on insurance contracts’ non-economic risk variables and certain economic risk variables impact contractual service margin, net income attributed to shareholders, other comprehensive income attributed to shareholders and total comprehensive income attributed to shareholders. For non-economic risk variables, the impacts are shown separately gross and net of the impacts of reinsurance contracts held. The adoption of IFRS 17 did not change the method or assumptions used for deriving sensitivity information.

The analysis is based on a simultaneous change in assumptions across all business units and holds all other assumptions constant. In practice, experience for each assumption will frequently vary by geographic market and business, and assumption updates are made on a business/geographic specific basis. Actual results can differ materially from these estimates for a variety of reasons including the interaction among these factors when more than one changes, actual experience differing from the assumptions, changes in business mix, effective tax rates, and the general limitations of our internal models.

Potential impact on contractual service margin, net income attributed to shareholders, other comprehensive income attributed to shareholders, and total comprehensive income attributed to shareholders arising from changes to non-economic assumptions

</tbody>
</table>

$^{(1)}$ The participating policy funds are largely self-supporting and experience gains or losses would generally result in changes to future dividends reducing the direct impact to the contractual service margin and shareholder income.

$^{(2)}$ An increase in mortality rates will generally increase insurance contract liabilities for life insurance contracts whereas a decrease in mortality rates will generally increase insurance contract liabilities for policies with longevity risk such as payout annuities.

$^{(3)}$ The sensitivity is measured for each direct insurance portfolio net of the impacts of any reinsurance held on the policies within that portfolio to determine if the overall insurance contract liabilities increased.

$^{(4)}$ No amounts related to morbidity risk are included for policies where the insurance contract liability provides only for claims costs expected over a short period, generally less than one year, such as Group Life and Health.

$^{(5)}$ The impacts of the sensitivities on LTC for morbidity, mortality and lapse do not assume any offsets from the Company’s ability to contractually raise premium rates in such events, subject to state regulatory approval. In practice, we would plan to file for rate increases equal to the amount of deterioration resulting from the sensitivity.

$^{(6)}$ This includes a 5% deterioration in incidence rates and 5% deterioration in claim termination rates.
Potential impact on contractual service margin, net income attributed to shareholders, other comprehensive income attributed to shareholders, and total comprehensive income attributed to shareholders arising from changes to non-economic assumptions on Long Term Care

(1) Note that the impact of these assumptions are not linear.
(2) Used in the determination of insurance contract liabilities with financial guarantees. This includes universal Life minimum crediting rate guarantees, participating life zero dividend floor implicit guarantees, and variable annuities guarantees, where a stochastic approach is used to capture the asymmetry of the risk.

D4 Accounting and reporting changes

Manulife adopted IFRS 17 and IFRS 9 effective for years beginning on January 1, 2023, to be applied retrospectively. See “Future Accounting and Reporting Changes” in the MD&A in our 2022 Annual Report ("2022 MD&A"). Our 2022 results have been restated for the adoption of IFRS 17, including the classification transition option, and IFRS 9. For other accounting and reporting changes during the quarter, refer to note 2 of our unaudited Interim Consolidated Financial Statements for the three and nine months ended September 30, 2023.

E OTHER

E1 Outstanding common shares – selected information

As at October 31, 2023, MFC had 1,812,390,809 common shares outstanding.
E2 Legal and regulatory proceedings

We are regularly involved in legal actions, both as a defendant and as a plaintiff. Information on legal and regulatory proceedings can be found in note 13 of our unaudited Interim Consolidated Financial Statements for the three and nine months ended September 30, 2023.

E3 Non-GAAP and other financial measures

The Company prepares its Consolidated Financial Statements in accordance with International Financial Reporting Standards (“IFRS”) as issued by the International Accounting Standards Board. We use a number of non-GAAP and other financial measures to evaluate overall performance and to assess each of our businesses. This section includes information required by National Instrument 52-112 – Non-GAAP and Other Financial Measures Disclosure in respect of “specified financial measures” (as defined therein).

Non-GAAP financial measures include core earnings (loss); pre-tax core earnings; core earnings available to common shareholders; core earnings before income taxes, depreciation and amortization (“core EBITDA”); total expenses; core expenses; total expenditures; core expenditures; transitional net income (loss) attributed to shareholders; transitional net income (loss) attributed to shareholders before tax; transitional net income (loss) before income taxes; transitional net income (loss); common shareholders’ transitional net income; Drivers of Earnings (“DOE”) line items for net investment result, other, income tax (expense) recovery and transitional net income attributed to participating policyholders and NCI; core DOE line items for core net insurance service result, core net investment result, other core earnings, and core income tax (expense) recovery; post-tax contractual service margin (“post-tax CSM”); post-tax contractual service margin net of NCI (“post-tax CSM net of NCI”); Manulife Bank net lending assets; Manulife Bank average net lending assets; assets under management (“AUM”); assets under management and administration (“AUMA”); Global WAM managed AUMA; core revenue; adjusted book value; and net annualized fee income. In addition, non-GAAP financial measures include the following stated on a constant exchange rate (“CER”) basis: any of the foregoing non-GAAP financial measures; net income attributed to shareholders; and common shareholders’ net income.

Non-GAAP ratios include core return on shareholders’ equity (“core ROE”); diluted core earnings per common share (“core EPS”); transitional return on common shareholders’ equity (“transitional ROE”); transitional basic earnings per common share (“transitional basic EPS”); transitional diluted earnings per common share (“transitional diluted EPS”); financial leverage ratio; adjusted book value per common share; common share core dividend payout ratio (“dividend payout ratio”); expense efficiency ratio; expenditure efficiency ratio; core EBITDA margin; effective tax rate on core earnings; effective tax rate on transitional net income attributed to shareholders; and net annualized fee income yield on average AUMA. In addition, non-GAAP ratios include the percentage growth/decline on a CER basis in any of the above non-GAAP financial measures; net income attributed to shareholders; common shareholders’ net income; pre-tax net income attributed to shareholders; general expenses; DOE line item for net insurance service result; CSM; CSM net of NCI; impact of new insurance business; new business CSM net of NCI; basic earnings per common share (“basic EPS”); and diluted earnings per common share (“diluted EPS”).

Other specified financial measures include assets under administration (“AUA”); consolidated capital; embedded value (“EV”); new business value (“NBV”); new business value margin (“NBV margin”); sales; annualized premium equivalent (“APE”) sales; gross flows; net flows; average assets under management and administration (“average AUMA”); Global WAM average managed AUMA; average assets under administration; remittances; any of the foregoing specified financial measures stated on a CER basis; and percentage growth/decline in any of the foregoing specified financial measures on a CER basis. In addition, we provide an explanation below of the components of core DOE line items other than the change in expected credit loss, the items that comprise certain items excluded from core earnings, and the components of CSM movement other than the new business CSM.
Our reporting currency for the Company is Canadian dollars and U.S. dollars is the functional currency for Asia and U.S. segment results. Financial measures presented in U.S. dollars are calculated in the same manner as the Canadian dollar measures. These amounts are translated to U.S. dollars using the period end rate of exchange for financial measures such as AUMA and the CSM balance and the average rates of exchange for the respective quarter for periodic financial measures such as our income statement, core earnings and items excluded from core earnings, transitional net income measures, and line items in our CSM movement schedule and DOE. Year-to-date or full year periodic financial measures presented in U.S. dollars are calculated as the sum of the quarterly results translated to U.S. dollars. See section E5 “Quarterly Financial Information” below for the Canadian to U.S. dollar quarterly rates of exchange.

Non-GAAP financial measures and non-GAAP ratios are not standardized financial measures under GAAP and, therefore, might not be comparable to similar financial measures disclosed by other issuers. Therefore, they should not be considered in isolation or as a substitute for any other financial information prepared in accordance with GAAP.

**Core earnings (loss)** is a financial measure which we believe aids investors in better understanding the long-term earnings capacity and valuation of the business. Core earnings allows investors to focus on the Company's operating performance by excluding the impact of market related gains or losses, changes in actuarial methods and assumptions that flow directly through income as well as a number of other items, outlined below, that we believe are material, but do not reflect the underlying earnings capacity of the business. For example, due to the long-term nature of our business, the mark-to-market movements in equity markets, interest rates including impacts on hedge accounting ineffectiveness, foreign currency exchange rates and commodity prices as well as the change in the fair value of ALDA from period-to-period can, and frequently do, have a substantial impact on the reported amounts of our assets, insurance contract liabilities and net income attributed to shareholders. These reported amounts may not be realized if markets move in the opposite direction in a subsequent period. This makes it very difficult for investors to evaluate how our businesses are performing from period-to-period and to compare our performance with other issuers.

We believe that core earnings better reflect the underlying earnings capacity and valuation of our business. We use core earnings and core EPS as key metrics in our short-term incentive plans at the total Company and operating segment level. We also base our mid- and long-term strategic priorities on core earnings.

We have updated our definition of core earnings to reflect the change in the recognition, measurement and presentation of insurance contract liabilities and financial assets and liabilities under IFRS 17 and IFRS 9, respectively, and have also replaced the nomenclature of the items included in core earnings and the net income items excluded from core earnings to conform with the nomenclature under IFRS 17 and IFRS 9.

Core earnings includes the expected return on our invested assets and any other gains (charges) from market experience are included in net income but excluded from core earnings. The expected return for fixed income assets is based on the related book yields. For ALDA and public equities, the expected return reflects our long-term view of asset class performance. These returns for ALDA and public equities vary by asset class and range from 3.25% to 11.5%, leading to an average return of between 9.0% to 9.5% on these assets as of September 30, 2023.

While core earnings is relevant to how we manage our business and offers a consistent methodology, it is not insulated from macroeconomic factors which can have a significant impact. See below for a reconciliation of core earnings to net income attributed to shareholders and income before income taxes. Net income attributed to shareholders excludes net income attributed to participating policyholders and non-controlling interests.

Any future changes to the core earnings definition referred to below, will be disclosed.
Items included in core earnings:

1. Expected insurance service result on in-force policies, including expected release of the risk adjustment, CSM recognized for service provided, and expected earnings from short-term products measured under the premium allocation approach (“PAA”).

2. Impacts from the initial recognition of new contracts (onerous contracts, including the impact of the associated reinsurance contracts).

3. Insurance experience gains or losses that flow directly through net income.

4. Operating and investment expenses compared with expense assumptions used in the measurement of insurance and investment contract liabilities.

5. Expected investment earnings, which is the difference between expected return on our invested assets and the associated finance income or expense from the insurance contract liabilities.

6. Net provision for ECL on FVOCI and amortized cost debt instruments.

7. Expected asset returns on surplus investments.

8. All earnings for the Global WAM segment, except for applicable net income items excluded from core earnings as noted below.

9. All earnings for the Manulife Bank business, except for applicable net income items excluded from core earnings as noted below.

10. Routine or non-material legal settlements.

11. All other items not specifically excluded.

12. Tax on the above items.

13. All tax related items except the impact of enacted or substantively enacted income tax rate changes and taxes on items excluded from core earnings.

Net income items excluded from core earnings:

1. Market experience gains (losses) including the items listed below:
   - Gains (charges) on general fund public equity and ALDA investments from returns being different than expected.
   - Gains (charges) on derivatives not in hedging relationships, or gains (charges) resulting from hedge accounting ineffectiveness.
   - Realized gains (charges) from the sale of FVOCI debt instruments.
   - Market related gains (charges) on onerous contracts measured using the variable fee approach (e.g. variable annuities, unit linked, participating insurance) net of the performance on any related hedging instruments.
   - Gains (charges) related to certain changes in foreign exchange rates.

2. Changes in actuarial methods and assumptions used in the measurement of insurance contract liabilities that flow directly through income.
   - The Company reviews actuarial methods and assumptions annually, and this process is designed to reduce the Company’s exposure to uncertainty by ensuring assumptions remain appropriate. This is accomplished by monitoring experience and selecting assumptions which represent a current view of expected future experience and ensuring that the risk adjustment is appropriate for the risks assumed.
   - Changes related to the ultimate spot rate within the discount curves are included in the market experience gains (losses).

3. The impact on the measurement of insurance and investment contract liabilities from changes in product features and new or changes to in-force reinsurance contracts, if material.

4. The fair value changes in long-term investment plan (“LTIP”) obligations for Global WAM investment management.
5. Goodwill impairment charges.
6. Gains or losses on acquisition and disposition of a business.
7. Material one-time only adjustments, including highly unusual / extraordinary and material legal settlements and restructuring charges, or other items that are material and exceptional in nature.
8. Tax on the above items.
9. Net income (loss) attributed to participating shareholders and non-controlling interests.
10. Impact of enacted or substantially enacted income tax rate changes.

As noted in section A1 “Implementation of IFRS 17 and IFRS 9”, our 2022 quarterly and year-to-date results are not directly comparable with 2023 results because IFRS 9 hedge accounting and expected credit loss (“ECL”) principles are applied prospectively effective January 1, 2023. Accordingly, we have presented comparative quarterly and year-to-date 2022 core earnings and our transitional net income metrics (see “Transitional net income to shareholders” paragraph below) inclusive of IFRS 9 hedge accounting and expected credit loss principles as if IFRS had allowed such principles to be implemented for 2022 (the “IFRS 9 transitional impacts”).

**Transitional net income (loss) attributed to shareholders** is a financial measure where our 2022 net income attributed to shareholders includes the effects of the IFRS 9 transitional impacts which we believe will assist investors in evaluating our operational performance because the associated adjustments are reported in our 2023 net income attributed to shareholders. **Transitional net income (loss) before income taxes, Transitional net income (loss), Transitional net income (loss) attributed to shareholders before income taxes and Common shareholders’ transitional net income (loss)** similarly include the effect of the IFRS 9 transitional impacts on our income (loss) before income taxes, net income (loss), net income (loss) attributed to shareholders before income taxes and common shareholders’ net income (loss), respectively. Transitional financial measures are temporary and will be reported for 2022 comparative periods in our quarterly and annual 2023 MD&A.

(1) Core earnings adjusted to reflect the foreign exchange rates for the Statement of Income in effect for 3Q23.
Core earnings available to common shareholders is a financial measure that is used in the calculation of core ROE and core EPS. It is calculated as core earnings (post-tax) less preferred share dividends.

The Company measures its progress on certain strategic priorities using core earnings, including core earnings related to strategic priorities.

Core earnings available to common shareholders, CER basis is the core earnings available to common shareholders divided by diluted weighted average common shareholders’ equity. The Company calculates CER as the annualized core earnings available to common shareholders divided by diluted weighted average common shareholders’ equity (see below).

Core ROE measures profitability using core earnings available to common shareholders as a percentage of the capital deployed to earn the core earnings. The Company calculates core ROE using average common shareholders’ equity quarterly, as the average of common shareholders’ equity at the start and end of the quarter, and annually, as the average of the quarterly average common shareholders’ equity for the year.

Core EPS is equal to core earnings available to common shareholders divided by diluted weighted average common shares outstanding.

Core earnings related to strategic priorities
The Company measures its progress on certain strategic priorities using core earnings, including core earnings from highest potential businesses. The core earnings for these businesses is calculated consistent with our definition of core earnings.

For the nine months ended September 30, ($ millions, post-tax and based on actual foreign exchange rates in effect in the applicable reporting period)
The effective tax rate on core earnings is equal to income tax on core earnings divided by pre-tax core earnings. The effective tax rate on net income attributed to shareholders is equal to income tax on transitional net income attributed to shareholders divided by pre-tax net income attributed to shareholders.

Common share core dividend payout ratio is a ratio that measures the percentage of core earnings paid to common shareholders as dividends. It is calculated as dividends per common share divided by core EPS.

Drivers of Earnings ("DOE") is used to identify the primary sources of gains or losses in each reporting period. It is one of the key tools we use to understand and manage our business. The DOE has replaced the Source of Earnings that was disclosed under OSFI’s Source of Earnings Disclosure (Life Insurance Companies) guideline. The DOE line items are comprised of amounts that have been included in our financial statements. The DOE shows the sources of net income (loss) attributed to shareholders and the core DOE shows the sources of core earnings and the items excluded from core earnings, reconciled to net income attributed to shareholders. We have included transitional non-GAAP financial measures for our 2022 comparative quarterly results. The elements of the core earnings view are described below:

Net Insurance Service Result represents the net income attributed to shareholders associated with providing insurance service to policyholders within the period. This includes lines attributed to core earnings including:

- **Expected earnings on insurance contracts** which includes the release of risk adjustment for expired non-financial risk, the CSM recognized for service provided and expected earnings on short-term PAA insurance business.

- **Impact of new insurance business** relates to income at initial recognition from new insurance contracts. Losses would occur if the group of new insurance contracts was onerous at initial recognition. If reinsurance contracts provide coverage for the direct insurance contracts, then the loss is offset by a corresponding gain on reinsurance contracts held.

- **Insurance experience gains (losses)** arise from items such as claims, persistency, and expenses, where the actual experience in the current period differs from the expected results assumed in the insurance and investment contract liabilities. Generally, this line would be driven by claims and expenses, as persistency experience relates to future service and would be offset by changes to the carrying amount of the contractual service margin unless the group is onerous, in which case the impact of persistency experience would be included in core earnings.

- **Other** represents pre-tax net income on residual items in the insurance result section.

Net Investment Result represents the net income attributed to shareholders associated with investment results within the period. Note that results associated with Global WAM and Manulife Bank are shown on separate DOE lines. However within the income statement, the results associated with these businesses would impact the total investment result. This section includes lines attributed to core earnings including:

- **Expected investment earnings**, which is the difference between expected asset returns and the associated finance income or expense from insurance contract liabilities, net of investment expenses.

- **Change in expected credit loss**, which is the gain or charge to net income attributed to shareholders for credit losses to bring the allowance for credit losses to a level management considers adequate for expected credit-related losses on its portfolio.

- **Expected earnings on surplus** reflects the expected investment return on surplus assets.

- **Other** represents pre-tax net income on residual items in the investment result section.
**Global WAM** is the pre-tax net income from the Global Wealth and Asset Management segment, adjusted for applicable items excluded from core earnings as noted in the core earnings (loss) section above.

**Manulife Bank** is the pre-tax net income from Manulife Bank, adjusted for applicable items excluded from core earnings as noted in the core earnings (loss) section above.

**Other** represents net income associated with items outside of the net insurance service result, net investment result, Global WAM and Manulife Bank. Other includes lines attributed to core earnings such as:

- **Non-Directly Attributable Expenses** are expenses incurred by the Company which are not directly attributable to fulfilling insurance contracts. Non-directly attributable expenses excludes non-directly attributable investment expenses as they are included in the net investment result.
- **Other** represents pre-tax net income on residual items in the Other section. Most notably this would include the cost of financing debt issued by Manulife.

Net income attributed to shareholders includes the following items excluded from core earnings:

- **Market experience gains (losses)** related to items excluded from core earnings that relate to changes in market variables.
- **Changes in actuarial methods and assumptions that flow directly through income** related to updates in the methods and assumptions used to value insurance contract liabilities.
- **Restructuring charges** includes a charge taken to reorganize operations.
- **Reinsurance transactions, tax-related items and other** include the impacts of new or changes to in-force reinsurance contracts, the impact of enacted or substantially enacted income tax rate changes and other amounts defined as items excluded from core earnings not specifically captured in the lines above.

All of the above items are discussed in more details in our definition of items excluded from core earnings.

---

(1) Consolidation adjustments in Other DOE line reclassified to net investment result DOE line.
(2) The impact of updating foreign exchange rates to that which was used in 3Q23.
(3) DOE on a CER basis adjusted to reflect the foreign exchange rates for the Statement of Income in effect for 3Q23.
The contractual service margin (“CSM”) is a liability that represents future unearned profits on insurance contracts written. It is a component of our insurance and reinsurance contract liabilities on our Statement of Financial Position. Organic and inorganic changes in CSM include amounts attributable to participating shareholders and non-controlling interests. CSM growth is the percentage change in the CSM net of NCI compared with a prior period on a constant exchange rate basis.

Changes in CSM that are classified as organic include the following impacts:

- **Impact of new business** is the impact on CSM from insurance contracts initially recognized in the period and includes acquisition expense related gains (losses) which impact the CSM in the period. It excludes the impact on CSM from entering into new in-force reinsurance contracts which would generally be considered a management action.

- **Expected movement related to finance income or expenses** includes interest accreted on the CSM during the period and the expected change in the CSM on VFA contracts if returns are as expected.

- **CSM recognized for service provided** is the portion of the CSM that is recognized in net income for service provided in the period.

- **Insurance experience gains (losses) and other** is primarily the change in the CSM balance from experience variances that relate to future periods. This includes persistency experience and changes in future period cash flows caused by other current period experience.

Changes in CSM that are classified as inorganic include:

- **Changes in actuarial methods and assumptions that adjust the CSM**;

- **Effect of movement in exchange rates** over the reporting period;

- **Impact of markets**; and

- **Reinsurance transactions, tax-related and other items** that reflects the impact related to future cash flows from items such as gains or losses on disposition of a business, the impact of enacted or substantially enacted income tax rate changes, material one-time only adjustments that are exceptional in nature and other amounts not specifically captured in the previous inorganic items.

**Post-tax CSM** is used in the definition of financial leverage ratio and consolidated capital and is calculated as the CSM adjusted for the marginal income tax rate in the jurisdictions that report a CSM balance. **Post-tax CSM net of NCI** is used in the adjusted book value per share calculation and is calculated as the CSM excluding non-controlling interests adjusted for the marginal income tax rate in the jurisdictions that report this balance.

**New Business CSM** is the impact of new business defined above, excluding CSM attributable to non-controlling interests. **New business CSM growth** is the percentage change in the New Business CSM net of NCI compared with a prior period on a constant exchange rate basis.

1. The impact of updating foreign exchange rates to that which was used in 3Q23.
2. New business CSM for Asia Other is reported by country annually, on a full year basis. Other Emerging Markets within Asia Other include Indonesia, the Philippines, Malaysia, Thailand, Cambodia and Myanmar.
The Company also uses financial performance measures that are prepared on a **constant exchange rate basis**, which exclude the impact of currency fluctuations (from local currency to Canadian dollars at a total Company level and from local currency to U.S. dollars in Asia). Such financial measures may be stated on a constant exchange rate basis or the percentage growth/decline in the financial measure on a constant exchange rate basis, using the income statement and balance sheet exchange rates effective for the third quarter of 2023.

Information supporting constant exchange rate basis for GAAP and non-GAAP financial measures is presented below and throughout this section.

**Basic EPS and diluted EPS, CER basis** is equal to common shareholders’ net income on a CER basis divided by the weighted average common shares outstanding and diluted weighted common shares outstanding, respectively.

**General expenses, CER basis**

($ millions, and based on actual foreign exchange rates in effect in the applicable reporting period, unless otherwise stated)

**Transitional ROE** measures profitability in 2022 using common shareholders’ transitional net income (loss) as a percentage of capital deployed to earn that income. The Company calculates transitional ROE using average common shareholders’ equity quarterly, as the average of common shareholders’ equity at the start and end of the quarter, and annually, as the average of the quarterly average common shareholders’ equity for the year. Transitional ROE is a temporary measure and will be reported for 2022 comparative periods in our quarterly and annual 2023 MD&A.

**Transitional basic EPS and transitional diluted EPS** is equal to transitional common shareholders’ net income divided by the weighted average common shares outstanding and diluted weighted common shares outstanding, respectively. **Transitional basic EPS and transitional diluted EPS, CER basis** is equal to transitional common shareholders’ net income on a CER basis divided by the weighted average common shares outstanding and diluted weighted common shares outstanding, respectively. Each of these EPS measures are temporary and will be reported for 2022 comparative periods in our quarterly and annual 2023 MD&A.

**AUMA** is a financial measure of the size of the Company. It is comprised of AUM and AUA. AUM includes assets of the General Account, consisting of total invested assets and segregated funds net assets, and external client assets for which we provide investment management services, consisting of mutual fund, institutional asset management and other fund net assets. AUA are assets for which we provide administrative services only. Assets under management and administration is a common industry metric for wealth and asset management businesses.

Our Global WAM business also manages assets on behalf of other segments of the Company. **Global WAM-managed AUMA** is a financial measure equal to the sum of Global WAM’s AUMA and assets managed by Global WAM on behalf of other segments. It is an important measure of the assets managed by Global WAM.

| Global WAM AUMA               | $ 806,748 |
| AUM managed by Global WAM for Manulife's other segments | 201,407 |

| Total                          | $ 1,008,155 |

(1) Corporate and Other consolidation adjustment related to net derivative assets reclassified from total invested assets to other lines on the Statement of Financial Position.
(2) Corporate and Other segregated funds net assets represent elimination of amounts held by the Company.
(3) Institutional asset management excludes institutional segregated funds net assets.
(4) US $ AUMA is calculated as total AUMA in Canadian $ divided by the US $ exchange rate in effect at the end of the quarter.
(5) The impact of updating foreign exchange rates to that which was used in 3Q23.
## AUM and AUMA reconciliations

(Canadian $ in millions, and based on actual foreign exchange rates in effect in the applicable reporting period, unless otherwise stated)

(1) AUMA adjusted to reflect the foreign exchange rates for the Statement of Financial Position in effect for 3Q23.

**Average assets under management and administration (“average AUMA”)** is the average of Global WAM’s AUMA during the reporting period. It is a measure used in analyzing and explaining fee income and earnings of our Global WAM segment. It is calculated as the average of the opening balance of AUMA and the ending balance of AUMA using daily balances where available and month-end or quarter-end averages when daily averages are unavailable. Similarly, Global WAM average managed AUMA and average AUA are the average of Global WAM’s managed AUMA and AUA, respectively, and are calculated in a manner consistent with average AUMA.
Manulife Bank net lending assets is a financial measure equal to the sum of Manulife Bank’s loans and mortgages, net of allowances. Manulife Bank average net lending assets is a financial measure which is calculated as the quarter-end average of the opening and the ending balance of net lending assets. Both of these financial measures are a measure of the size of Manulife Bank’s portfolio of loans and mortgages and are used to analyze and explain its earnings.

Financial leverage ratio is a debt-to-equity ratio. With the adoption of IFRS 17 on January 1, 2023, the calculation of financial leverage ratio was updated to include the CSM on a post-tax basis, and prior period comparatives were updated. The ratio is calculated as the sum of long-term debt, capital instruments and preferred shares and other equity instruments divided by the sum of long-term debt, capital instruments, equity and post-tax CSM.

Adjusted book value is the sum of common shareholders’ equity and post-tax CSM net of NCI. It is an important measure for monitoring growth and measuring insurance businesses’ value. Adjusted book value per common share is calculated by dividing adjusted book value by the number of common shares outstanding at the end of the period.

Consolidated capital serves as a foundation of our capital management activities at the MFC level. Consolidated capital is calculated as the sum of: (i) total equity excluding accumulated other comprehensive income (“AOCI”) on cash flow hedges; (ii) post-tax CSM; and (iii) certain other capital instruments that qualify as regulatory capital. For regulatory reporting purposes under the LICAT framework, the numbers are further adjusted for various additions or deductions to capital as mandated by the guidelines defined by OSFI.

Core EBITDA is a financial measure which Manulife uses to better understand the long-term earnings capacity and valuation of our Global WAM business on a basis more comparable to how the profitability of global asset managers is generally measured. Core EBITDA presents core earnings before the impact of interest, taxes, depreciation, and amortization. Core EBITDA excludes certain acquisition expenses related to insurance contracts in our retirement businesses which are deferred and amortized over the expected lifetime of the customer relationship. Core EBITDA was selected as a key performance indicator for our Global WAM business, as EBITDA is widely used among asset management peers, and core earnings is a primary profitability metric for the Company overall.

Reconciliation of Global WAM core earnings to core EBITDA and Global WAM core EBITDA by business line and geographic source

### Expense measures

With the adoption of IFRS 17, we have replaced core general expenses with two new measures: core expenses and core expenditures. Under IFRS 17, expenses previously reported in general expenses are now reported as:

1. General expenses that flow directly through income;
2. Directly attributable maintenance expenses, which are reported in insurance service expenses and flow directly through income;
3. Directly attributable acquisition expenses for contracts measured using the PAA method which are reported in insurance service expenses, and flow directly through income; and
4. Directly attributable acquisition expenses that are capitalized into the CSM.

**Total expenses** include items 1 to 3 above and **total expenditures** include items 1 to 4 above.
Core expenses is used to calculate our expense efficiency ratio and is equal to total expenses that are included in core earnings and excludes such items as material legal provisions for settlements, restructuring charges and expenses related to integration and acquisitions.

($ millions, and based on actual foreign exchange rates in effect in the applicable reporting period, unless otherwise stated)

(1) Expenses are components of insurance service expenses on the Statements of Income that flow directly through income.

(2) The impact of updating foreign exchange rates to that which was used in 3Q23.

Core expenditures is used to calculate our expenditure efficiency ratio and is equal to total expenditures excluding such items as material legal provisions for settlements, restructuring charges and expenses related to integration and acquisitions. Total expenditures is equal to the sum of total expenses and costs that are directly attributable to the acquisition of new business that are capitalized into the CSM.

(1) Expenses are components of insurance service expenses on the Statements of Income and are then capitalized to CSM.

(2) The impact of updating foreign exchange rates to that which was used in 3Q23.
**Expense efficiency ratio** is a financial measure which Manulife uses to measure progress towards our target to be more efficient. It is defined as core expenses divided by the sum of core earnings before income taxes (“pre-tax core earnings”) and core expenses.

**Expenditure efficiency ratio** is a financial measure which Manulife uses to measure progress towards our target to be more efficient. It is defined as core expenditures divided by the sum of core earnings before income taxes (“pre-tax core earnings”) and core expenditures.

**Embedded value (“EV”)** is a measure of the present value of shareholders’ interests in the expected future distributable earnings on in-force business reflected in the Consolidated Statements of Financial Position of Manulife, excluding any value associated with future new business. EV is calculated as the sum of the adjusted net worth and the value of in-force business calculated as at December 31. The adjusted net worth is the IFRS shareholders’ equity adjusted for goodwill and intangible assets, fair value of surplus assets, the fair value of debt, preferred shares, and other equity, and local statutory balance sheet, regulatory reserve, and capital for our Asian businesses. The value of in-force business in Canada and the U.S. is the present value of expected future IFRS earnings, on an IFRS 4 basis, on in-force business less the present value of the cost of holding capital to support the in-force business under the LICAT framework. The value of in-force business in Asia reflects local statutory earnings and capital requirements. The value of in-force business excludes Global WAM, Bank or P&C Reinsurance businesses.

**Net annualized fee income yield on average AUMA (“Net fee income yield”)** is a financial measure that represents the net annualized fee income from Global WAM channels over average AUMA. This measure provides information on Global WAM’s adjusted return generated from managing AUMA.

**Net annualized fee income** is a financial measure that represents Global WAM income before income taxes, adjusted to exclude items unrelated to net fee income, including general expenses, investment income, non-AUMA related net benefits and claims, and net premium taxes. It also excludes the components of Global WAM net fee income from managing assets on behalf of other segments. This measure is annualized based on the number of days in the year divided by the number of days in the reporting period.

### Reconciliation of income before income taxes to net fee income yield

**New business value (“NBV”)** is the change in embedded value as a result of sales in the reporting period. The definition of NBV has changed for periods beginning after 2022 as follows:

- adopting IFRS 17 in the calculation of expected future distributable earnings in Canada, and international high net worth business, which was reclassified to the Asia segment in 2023; and
- changing the basis for calculating expected future distributable earnings in the U.S. from IFRS to local capital requirements.
NBV for periods beginning after December 31, 2022 is calculated as the present value of shareholders’ interests in expected future distributable earnings in accordance with IFRS 17, after the cost of capital calculated under the LICAT framework in Canada and the local capital requirements in the U.S. and Asia, on actual new business sold in the period using assumptions that are consistent with the assumptions used in the calculation of embedded value.

NBV for periods prior to January 1, 2023 is calculated as the present value of shareholders’ interests in expected future distributable earnings in accordance with IFRS 4 “Insurance Contracts”, after the cost of capital calculated under the LICAT framework in Canada and the U.S. and the local capital requirements in Asia, on actual new business sold in the period using assumptions that are consistent with the assumptions used in the calculation of embedded value.

NBV excludes businesses with immaterial insurance risks, such as the Company’s Global WAM, Manulife Bank and the P&C Reinsurance businesses. NBV is a useful metric to evaluate the value created by the Company’s new business franchise.

**New business value margin (“NBV margin”)** is calculated as NBV divided by APE sales excluding non-controlling interests. APE sales are calculated as 100% of regular premiums and deposits sales and 10% of single premiums and deposits sales. NBV margin is a useful metric to help understand the profitability of our new business.

**Sales are measured according to product type:**

For individual insurance, sales include 100% of new annualized premiums and 10% of both excess and single premiums. For individual insurance, new annualized premiums reflect the annualized premium expected in the first year of a policy that requires premium payments for more than one year. Single premium is the lump sum premium from the sale of a single premium product, e.g. travel insurance. Sales are reported gross before the impact of reinsurance.

For group insurance, sales include new annualized premiums and administrative services only premium equivalents on new cases, as well as the addition of new coverages and amendments to contracts, excluding rate increases.

Insurance-based wealth accumulation product sales include all new deposits into variable and fixed annuity contracts. As we discontinued sales of new variable annuity contracts in the U.S. in 1Q13, subsequent deposits into existing U.S. variable annuity contracts are not reported as sales. Asia variable annuity deposits are included in APE sales.

APE sales are comprised of 100% of regular premiums and deposits and 10% of excess and single premiums and deposits for both insurance and insurance-based wealth accumulation products.

**Gross flows** is a new business measure presented for our Global WAM business and includes all deposits into mutual funds, group pension/retirement savings products, private wealth and institutional asset management products. Gross flows is a common industry metric for WAM businesses as it provides a measure of how successful the businesses are at attracting assets.

**Net flows** is presented for our Global WAM business and includes gross flows less redemptions for mutual funds, group pension/retirement savings products, private wealth and institutional asset management products. In addition, net flows include the net flows of exchange traded funds and non-proprietary product sold by Manulife Securities. Net flows is a common industry metric for WAM businesses as it provides a measure of how successful the businesses are at attracting and retaining assets. When net flows are positive, they are referred to as net inflows. Conversely, negative net flows are referred to as net outflows.

**Remittances** is defined as the cash remitted or available for distribution to the Manulife Group from operating subsidiaries and excess capital generated by standalone Canadian operations. It is one of the key metrics used by management to evaluate our financial flexibility.
Caution regarding forward-looking statements

From time to time, MFC makes written and/or oral forward-looking statements, including in this document. In addition, our representatives may make forward-looking statements orally to analysts, investors, the media and others. All such statements are made pursuant to the “safe harbour” provisions of Canadian provincial securities laws and the U.S. Private Securities Litigation Reform Act of 1995.

The forward-looking statements in this document include, but are not limited to, statements with respect to the impact of changes in tax laws, the estimated timing and amount of state approved future premium increases on our U.S. LTC business, the probability and impact of LICAT scenario switches and also relate to, among other things, our objectives, goals, strategies, intentions, plans, beliefs, expectations and estimates, and can generally be identified by the use of words such as “may”, “will”, “could”, “should”, “would”, “likely”, “suspect”, “outlook”, “expect”, “intend”, “estimate”, “anticipate”, “believe”, “plan”, “forecast”, “objective”, “seek”, “aim”, “continue”, “goal”, “restore”, “embark” and “endeavour” (or the negative thereof) and words and expressions of similar import, and include statements concerning possible or assumed future results. Although we believe that the expectations reflected in such forward-looking statements are reasonable, such statements involve risks and uncertainties, and undue reliance should not be placed on such statements and they should not be interpreted as confirming market or analysts’ expectations in any way.

Certain material factors or assumptions are applied in making forward-looking statements and actual results may differ materially from those expressed or implied in such statements. Important factors that could cause actual results to differ materially from expectations include but are not limited to: general business and economic conditions (including but not limited to the performance, volatility and correlation of equity markets, interest rates, credit and swap spreads, inflation rates, currency rates, investment losses and defaults, market liquidity and creditworthiness of guarantors, reinsurers and counterparties); the ongoing prevalence of COVID-19, including any variants, as well as actions that have been, or may be taken by governmental authorities in response to COVID-19, including the impacts of any variants; changes in laws and regulations; changes in accounting standards applicable in any of the territories in which we operate; changes in laws and regulations; changes in accounting standards applicable in any of the territories in which we operate; changes in regulatory capital requirements; our ability to obtain premium rate increases on in-force policies; our ability to execute strategic plans and changes to strategic plans; downgrades in our financial strength or credit ratings; our ability to maintain our reputation; impairments of goodwill or intangible assets or the establishment of provisions against future tax assets; the accuracy of estimates relating to morbidity, mortality and policyholder behaviour; the accuracy of other estimates used in applying accounting policies, actuarial methods and embedded value methods; our ability to implement effective hedging strategies and unforeseen consequences arising from such strategies; our ability to source appropriate assets to back our long-dated liabilities; level of competition and consolidation; our ability to market and distribute products through current and future distribution channels; unforeseen liabilities or asset impairments arising from acquisitions and dispositions of businesses; the realization of losses arising from the sale of investments classified as fair value through other comprehensive income; our liquidity, including the availability of financing to satisfy existing financial liabilities on expected maturity dates when required; obligations to pledge additional collateral; the availability of letters of credit to provide capital management flexibility; accuracy of information received from counterparties and the ability of counterparties to meet their obligations; the availability, affordability and adequacy of reinsurance; legal and regulatory proceedings, including tax audits, tax litigation or similar proceedings; our ability to adapt products and services to the changing market; our ability to attract and retain key executives, employees and agents; the appropriate use and interpretation of complex models or deficiencies in models used; political, legal, operational and other risks associated with our non-North American operations; geopolitical uncertainty, including international conflicts; acquisitions and our ability to complete acquisitions including the availability of equity and debt financing for this purpose; the disruption of or changes to key elements of the Company’s or public infrastructure systems; environmental concerns, including climate change; our ability to protect our intellectual property and exposure to claims of infringement; and our inability to withdraw cash from subsidiaries.
Additional information about material risk factors that could cause actual results to differ materially from expectations and about material factors or assumptions applied in making forward-looking statements may be found in this document under “Risk Management and Risk Factors Update” and “Critical Actuarial and Accounting Policies”, under “Risk Management and Risk Factors” and “Critical Actuarial and Accounting Policies” in the Management’s Discussion and Analysis in our most recent annual report and, in the “Risk Management” note to the consolidated financial statements in our most recent annual and interim reports and elsewhere in our filings with Canadian and U.S. securities regulators.

The forward-looking statements in this document are, unless otherwise indicated, stated as of the date hereof and are presented for the purpose of assisting investors and others in understanding our financial position and results of operations, our future operations, as well as our objectives and strategic priorities, and may not be appropriate for other purposes. We do not undertake to update any forward-looking statements, except as required by law.

E5 Quarterly financial information

The following table provides summary information related to our eight most recently completed quarters. With the adoption of IFRS 17 and IFRS 9 on January 1, 2023, we have provided quarterly 2023 and restated quarterly 2022 information based on the new standard. See section A1 “Implementation of IFRS 17 and IFRS 9” for additional information. Information has not been restated prior to January 1, 2022 and as a result, quarterly 2021 information is based on what was reported in those quarters.

</table>

Total revenue was $9.3 billion in 3Q23 compared with $9.5 billion in 3Q22 due to a decrease in net investment income partially offset by higher insurance revenue.

- Asia total revenue was $1.5 billion in 3Q23 compared with $1.9 billion in 3Q22. The decrease was primarily driven by a decrease in net investment income due to net realized and unrealized losses on derivatives and bonds in 3Q23 compared with gains in 3Q22 partially offset by lower net realized and unrealized losses on public equities in 3Q23.
- Canada total revenue was $2.6 billion in 3Q23 compared with $3.6 billion in 3Q22. The decrease was primarily due to lower net investment income as a result of net realized and unrealized losses on derivatives and bonds in 3Q23 compared with gains in 3Q22. This was partially offset by higher insurance revenue due to business growth.
- U.S. total revenue was $3.5 billion in 3Q23 compared with $2.9 billion in 3Q22. The increase was primarily driven by higher insurance revenue and lower net realized and unrealized losses on derivatives, with losses in both years as a result of changes in interest rates, partially offset by lower investment income from ALDA.
- Global WAM total revenue was $1.4 billion in 3Q23 compared with $1.3 billion in 3Q22. The increase was mainly due to higher fee income from growth in average AUMA and higher performance fees in Institutional Asset Management.
- Corporate and Other total revenue was $0.3 billion in 3Q23 compared with $nil in 3Q22. The increase was primarily driven by net realized gains on the sale of FVOCI debt instruments in 3Q23 compared with realized losses in 3Q22 and higher yields on debt instruments.

On a year-to-date basis total revenue was $35.0 billion in 2023 compared with $20.4 billion for the same period in 2022.

- Asia year-to-date total revenue was $8.4 billion in 2023 compared with $5.1 billion in 2022. The year-to-date increase was primarily driven by net realized and unrealized public equity gains in 2023 compared with losses in 2022, and lower net realized and unrealized losses on derivatives in 2023 partially offset by lower net realized and unrealized gains on bonds in 2023 compared with 2022.
- Canada year-to-date total revenue was $9.3 billion in 2023 compared with $4.7 billion in 2022. The year-to-date increase was primarily due to higher net investment income driven by lower net realized and unrealized losses on derivatives, and net unrealized gains from public equities in 2023 compared with losses in 2022, and higher insurance revenue due to business growth.
- U.S. year-to-date total revenue was $10.8 billion in 2023 compared with $7.2 billion in 2022. The year-to-date increase was primarily driven by net realized and unrealized losses on derivatives in 2022, partially offset by lower investment income.
• Global WAM year-to-date total revenue was $4.3 billion in 2023 compared with $3.7 billion in 2022. The year-to-date increase was due mainly to higher losses from seed money investments in 2022 and the favourable impact of a weaker Canadian dollar compared with the U.S. dollar.

• Corporate and Other year-to-date total revenue was $1.2 billion in 2023 compared with a loss of $0.3 billion in 2022. The year-to-date increase was primarily due to similar reasons noted above and a more favourable impact of markets on public equities and other assets.

E7 Other

No changes were made in our internal control over financial reporting during the nine months ended September 30, 2023 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting except that, in connection with the adoption of IFRS 17 and IFRS 9, the Company made significant updates and modifications to existing internal controls and implemented a number of new internal controls. These changes include controls over new and existing systems, including technological systems, and controls that were implemented or modified in our actuarial and accounting processes to address the risks associated with the newly adopted accounting standards.

As in prior quarters, MFC's Audit Committee has reviewed this MD&A and the unaudited interim financial report and MFC's Board of Directors approved this MD&A prior to its release.

**Other comprehensive income (loss) ("OCI"), net of tax:**

### Items that may be subsequently reclassified to net income:

**Foreign exchange gains (losses) on:**
- Translation of foreign operations: 655, 1,953, (568), 1,925
- Net investment hedges: (143), (404), 34, (464)

**Insurance finance income (expense):** 13,516, 14,091, 7,800, 61,599

**Reinsurance finance income (expense):** (1,860), (2,124), (1,369), (6,868)

**Fair value through OCI investments:**
- Unrealized gains (losses) arising during the period on assets supporting insurance and investment contract liabilities: (10,501), (11,360), (5,702), (48,854)
- Reclassification of net realized gains (losses) and provision for credit losses recognized in income: 60, 265, 193, 831

**Cash flow hedges:**
- Unrealized gains (losses) arising during the period: 38, 19, 51, 143
- Reclassification of realized gains (losses) to net income: 9, 11, 10, (5)

**Cost of hedging:**
- Unrealized gains (losses) arising during the period: (1), - , (8), -
- Share of other comprehensive income (losses) of associates: 1, (9), 1, (7)

**Total items that may be subsequently reclassified to net income:** 1,774, 2,442, 442, 8,300

**Items that will not be reclassified to net income:**
- Change in actuarial gains (losses) on pension and other post-employment plans: 11, (49), 5, 17
- Real estate revaluation reserve: - , - , 1, -

**Total items that will not be reclassified to net income:** 11, (49), 6, 17

**Other comprehensive income (loss), net of tax:** 1,785, 2,393, 448, 8,317

**Total comprehensive income (loss), net of tax:** 3,010, 2,817, 4,254, 5,415

**Total comprehensive income (loss) attributed to:**
- Non-controlling interests: $6, $6, $49, $42
- Participating policyholders: 183, (109), 243, (154)
- Shareholders and other equity holders: 2,821, 2,920, 3,962, 5,527

The accompanying notes are an integral part of these unaudited Interim Consolidated Financial Statements.
Note 1  Nature of Operations and Significant Accounting Policies

(a) Reporting entity
Manulife Financial Corporation (“MFC”) is a publicly traded company and the holding company of The Manufacturers Life Insurance Company (“MLI”), a Canadian life insurance company. MFC, including its subsidiaries (collectively, “Manulife” or the “Company”) is a leading financial services group with principal operations in Asia, Canada and the United States. Manulife’s international network of employees, agents and distribution partners offers financial protection and wealth management products and services to personal and business clients as well as asset management services to institutional customers. The Company operates as Manulife in Asia and Canada and as Manulife and John Hancock in the United States.

These Interim Consolidated Financial Statements and condensed notes have been prepared in accordance with International Accounting Standard (“IAS”) 34 “Interim Financial Reporting” as issued by the International Accounting Standards Board (“IASB”), using accounting policies which are consistent with those used in the Company’s 2022 Annual Consolidated Financial Statements, and those described in notes 1, 2 and 25 of the Company’s 2022 Annual Consolidated Financial Statements. Notes 2 and 25 notably relate to the adoption of International Financial Reporting Standards (“IFRS”) 17 (“Insurance Contracts”) and IFRS 9 (“Financial Instruments”) and related accounting policies.

These Interim Consolidated Financial Statements should be read in conjunction with the audited Annual Consolidated Financial Statements for the year ended December 31, 2022, included on pages 131 to 229 of the Company’s 2022 Annual Report, as well as the disclosures on risk in denoted components of the “Risk Management and Risk Factors” section of the Third Quarter 2023 Management Discussion and Analysis (“MD&A”). These denoted risk disclosures are an integral part of these Interim Consolidated Financial Statements. Additional disclosures for the year ended December 31, 2022 under IFRS 17 are included directly in these Interim Consolidated Financial Statements.

These Interim Consolidated Financial Statements as at and for the three and nine months ended September 30, 2023 were authorized for issue by MFC’s Board of Directors on November 8, 2023.

(b) Basis of preparation
Refer to notes 1, 2 and 25 of the Company’s 2022 Annual Consolidated Financial Statements for a summary of the most significant estimation processes used in the preparation of these Interim Consolidated Financial Statements under IFRS and description of the Company’s measurement techniques in determining carrying values and respective fair values of its assets and liabilities.

Note 2  Accounting and Reporting Changes

(a) Changes in accounting and reporting policy

(I) IFRS 17 “Insurance Contracts”
IFRS 17 “Insurance Contracts” (“IFRS 17”) was issued in May 2017 to be effective for years beginning on January 1, 2021. Amendments to IFRS 17 were issued in June 2020 and included a two-year deferral of the effective date. IFRS 17 as amended, became effective for years beginning on January 1, 2023, to be applied retrospectively. If full retrospective application to a group of contracts is impracticable the modified retrospective or fair value methods may be used. The standard replaced IFRS 4 “Insurance Contracts” (“IFRS 4”) and therefore replaced the Canadian Asset Liability Method (“CALM”) and materially changed the recognition and measurement of insurance contracts and the corresponding presentation and disclosures in the Company’s Consolidated Financial Statements.
Narrow-scope amendments to IFRS 17 were issued in December 2021 and were effective on initial application of IFRS 17 and IFRS 9 “Financial Instruments” (“IFRS 9”) which the Company has adopted on January 1, 2023. The amendments reduce accounting mismatches between insurance contract liabilities and financial assets in scope of IFRS 9 within comparative prior periods when initially applying IFRS 17 and IFRS 9. The amendments allow insurers to present comparative information on financial assets as if IFRS 9 were fully applicable during the comparative period. The amendments do not permit application of IFRS 9 hedge accounting principles to the comparative period.

The Company adopted IFRS 17 on January 1, 2023, with an effective date of January 1, 2022. To illustrate the effects of adoption, the Company presented in note 2 (b)(i) of the Company’s 2022 Annual Consolidated Financial Statements a condensed opening Statement of Financial Position prepared under IFRS 17 as at January 1, 2022 and also the Company’s invested assets classified and measured in accordance with IFRS 9 as at January 1, 2022 compared to how they are classified and measured under IAS 39 “Financial Instruments: Recognition and Measurement” (“IAS 39”). The Company’s 2022 Annual Consolidated Financial Statements note 2 b(i) includes explanations of differences in IFRS 17 principles compared to CALM and of the detailed effects of the Company’s adoption.

The 2022 comparative figures as presented in these Interim Consolidated Financial Statements have been restated, where indicated, for the adoption of IFRS 17. For the Company’s accounting policies for applying IFRS 17 to the Company’s insurance and reinsurance contracts, refer to note 25 of the Company’s 2022 Annual Consolidated Financial Statements.

(II) IFRS 9 “Financial Instruments” and IFRS 7 “Financial Instruments: Disclosures”

IFRS 9 was issued in November 2009 and amended in October 2010, November 2013 and July 2014, and is effective for years beginning on or after January 1, 2018, to be applied retrospectively, or on a modified retrospective basis. Additionally, the IASB issued amendments in October 2017 that are effective for annual periods beginning on or after January 1, 2019. In conjunction with the amendments to IFRS 17 issued in June 2020, the IASB amended IFRS 4 to permit eligible insurers to apply IFRS 9 effective January 1, 2023, alongside IFRS 17. The standard replaced IAS 39. IFRS 9 addresses accounting and reporting principles for the classification and measurement of financial assets and financial liabilities, the impairment of financial assets and hedge accounting. IFRS 7 “Financial Instruments: Disclosures” (“IFRS 7”) was amended in conjunction with IFRS 9 and IFRS 17, with expanded qualitative and quantitative disclosures related to financial instruments and became effective along with IFRS 9 and IFRS 17 on January 1, 2023.

The Company adopted IFRS 9 on January 1, 2023, as permitted under the June 2020 amendments to IFRS 4. The Company’s accounting policies for invested assets, and derivative and hedging instruments in accordance with IFRS 9 are presented in note 25 of the Company’s 2022 Annual Consolidated Financial Statements. Note 2 (b)(ii) of the Company’s 2022 Annual Consolidated Financial Statements includes explanations of IFRS 9’s accounting and reporting principles.

IFRS 9 does not require restatement of comparative periods and the Company has not done so. The Company elected the option under IFRS 17 to reclassify financial assets, including those held in respect of activities not connected to contracts within the scope of IFRS 17, on an instrument-by-instrument basis, for 2022 comparatives in order to align with the classifications on initial application of IFRS 9 as at January 1, 2023. These classification changes are illustrated in note 2 (b)(i) of the Company’s 2022 Annual Consolidated Financial Statements. These classification changes led the Company to present certain investment results previously reported in net investment income or OCI under IAS 39, within OCI or net investment income under IFRS 9, respectively. For 2022 comparative information, the Company did not apply IFRS 9’s expected credit loss (“ECL”) impairment model or hedge accounting principles. With respect to these matters, the guidance contained in IAS 39 was maintained. In the case of assets previously classified as fair value through profit or loss (“FVTPL”) under IAS 39 and classified as fair value through other comprehensive income (“FVOCI”) or amortized cost under IFRS 9, no IAS 39 impairment was calculated for these Interim Consolidated Financial Statements.
Consistent with IFRS 17 amendments, the adoption of IFRS 9 resulted in certain differences in the classification and measurement of financial assets when compared to their classification and measurement under IAS 39. The most significant classification changes included approximately $184 billion of debt securities previously classified as FVTPL which are classified as FVOCI under IFRS 9.

The Company has elected to apply the hedge accounting requirements under IFRS 9 to all designated hedge accounting relationships prospectively, with the exception to the cost of hedging guidance, that has been applied retrospectively for certain cash flow hedge and net investment hedge relationships. As at January 1, 2023, all existing IAS 39 hedge accounting relationships were assessed and qualified for hedge accounting under IFRS 9. These existing relationships are treated as continuing hedge accounting relationships under IFRS 9 on January 1, 2023 and are disclosed with comparative information for 2022 under IAS 39. Refer to note 4.

The Company has designated new hedge accounting relationships with the objective to reduce potential accounting mismatches between changes in the fair value of derivatives in income, and changes in fair value due to financial risk of insurance liabilities and financial assets in OCI. The incremental notional of derivatives designated in new hedge accounting relationships amounted to $232,637 on transition date. New hedge accounting relationships are effective prospectively on January 1, 2023.

The effects of adoption were as follows:

- Effects from applying IFRS 17 asset classification changes among FVTPL, AFS and amortized cost under IAS 39 to FVOCI and FVTPL under IFRS 9 resulted in a reduction in retained earnings of $10,645, net of tax, and an increase in OCI of $16,916, net of tax, as at January 1, 2022 when IFRS 17’s transition option was elected. These were presented under “Opening adjustment of financial assets at adoption of IFRS 9 / IFRS 17” in the Consolidated Statements of Changes in Equity.
- The adoption of IFRS 9 resulted in recognition of ECL of $724. Loss allowances when applied to assets held at amortized cost reduce the carrying value of the assets, and reduce equity. Loss allowances do not affect the fair value of assets held at FVOCI and therefore do not affect their carrying value. Loss allowances for assets held at FVOCI do not change total equity, instead result in movement between OCI and retained earnings.
- The impact of adopting IFRS 9’s ECL impairment methodology resulted in a reduction to retained earnings of $409, net of tax, and an increase to accumulated OCI ("AOCI") of $408 net of tax, on January 1, 2023. This results from the derecognition of loss allowances in accordance with IAS 39, and the recognition of ECL on FVOCI assets with reductions in retained earnings and corresponding increases in AOCI. For financial assets held at amortized cost and investment commitments, ECL was recognized with reductions in retained earnings.
- As at January 1, 2023, the retrospective application of IFRS 9 cost of hedging for currency basis spread resulted with a net $22 reclassification from cash flow hedge and foreign currency translation reserve to a new separate component of accumulated OCI, the cost of hedging. Other IFRS 9 hedge accounting principles had $nil impact as at January 1, 2023 for these Interim Consolidated Financial Statements.
- The impact of changes made as at January 1, 2023 were presented under line items labeled “Opening adjustment of financial assets at adoption of IFRS 9 / IFRS 17” in the Consolidated Statements of Changes in Equity.

The implementation of IFRS 9 has been incorporated into the Company’s Enterprise Risk Management Framework (“ERM”) and supervised by the Executive Risk Committee (“ERC”). The integration of forward-looking information into the calculation of the ECL and the definition and evaluation of what constitutes a significant increase in credit risk (“SICR”) of an investment are inherently subjective and involve the use of significant expert judgement. Therefore, the Company has developed a front-to-back governance framework over the ECL calculation and has designed controls and procedures to provide reasonable assurance that information is properly recorded. The Company has effective credit risk management processes in place that continue to be applicable and aim to ensure that the effects of economic developments are appropriately considered, mitigation actions are taken where required and risk appetite is reassessed and adjusted as needed.
The Company adopted IFRS 7 (as amended), which expanded qualitative and quantitative disclosures related to financial instruments on January 1, 2023. Refer to notes 3, 4 and 7.

The following table illustrates the impact on loss allowances for invested assets on transition from the incurred loss impairment under IAS 39 to the expected credit losses impairment allowance under IFRS 9.

</table>

(1) Investment contract liabilities held at amortized cost of $6,829 were reclassified from insurance contract liabilities under IFRS 4.
(2) Other liabilities include amounts not in scope of IFRS 9, for example pension obligations. Other liabilities of $1,473 held at amortized cost under IFRS 9 were reclassified from insurance contract liabilities under IFRS 4.

(III) Amendments to IAS 1 “Presentation of Financial Statements”
Amendments to IAS 1 “Presentation of Financial Statements” and IFRS Practice Statement 2 “Making Materiality Judgements” were issued in February 2021 and are effective prospectively on or after January 1, 2023 with earlier application permitted. The amendments address the process of selecting accounting policy disclosures, which will be based on assessments of the materiality of the accounting policies to the entity’s financial statements. Adoption of these amendments did not have a significant impact on the Company’s Consolidated Financial Statements.

(IV) Amendments to IAS 8 “Accounting Policies, Changes to Accounting Estimates and Errors”
Amendments to IAS 8 “Accounting Policies, Changes to Accounting Estimates and Errors” were issued in February 2021, and are effective prospectively on or after January 1, 2023, with earlier application permitted. The amendments include new definitions of estimate and change in accounting estimate, intended to help clarify the distinction among changes in accounting estimates, changes in accounting policies, and corrections of errors. Adoption of these amendments did not have a significant impact on the Company’s Consolidated Financial Statements.
(V) Amendments to IAS 12 “Income Taxes”
Amendments to IAS 12 Income Taxes were issued in May 2023. The amendments relate to international Pillar Two tax reform, which seeks to establish a global minimum corporate income tax and addresses base erosion and profit shifting. Effective on issuance, the amendments provide a temporary exception to the requirements to recognize and disclose information about deferred taxes related to implementation of Pillar Two tax reforms with disclosure of application of this exception being required. The Company has applied the mandatory temporary exemption from accounting for deferred taxes in respect of the Pillar Two income taxes, which is effective immediately. Effective for annual reporting for the year ending December 31, 2023, disclosure of current tax expense or recovery related to Pillar Two income taxes is required along with, to the extent that Pillar Two legislation is enacted or substantively enacted but not yet in effect, disclosure of known or reasonably estimable information that helps users of financial statements understand the Company’s exposure to Pillar Two income taxes arising from that legislation. The Company is assessing the impact of these amendments on the Company’s Consolidated Financial Statements.

(1) FVTPL classification was elected for debt instruments backing certain insurance contract liabilities to substantially reduce any accounting mismatch arising from changes in the fair value of these assets, or changes in the carrying value of the related insurance contract liabilities.
(2) FVOCI classification for debt instruments backing certain insurance contract liabilities inherently reduces any accounting mismatch arising from changes in the fair value of these assets, or changes in the carrying value of the related insurance contract liabilities.
(3) Other includes mortgages and loans to Bank clients held at amortized cost, own use properties, investment properties, equity method accounted investments, and leveraged leases. Also includes debt securities, which qualify as having Solely Payment of Principal and Interest ("SPPI"), are held to collect contractual cash flows and are carried at amortized cost.
(4) Invested assets above include debt securities, mortgages, private placements and approximately $344 (December 31, 2022 – $302) of other invested assets, which primarily qualify as SPPI. Invested assets which do not have SPPI qualifying cash flows as at September 30, 2023 include debt securities, private placements and other invested assets with fair values of $nil, $116 and $526 respectively (December 31, 2022 – $nil, $98 and $507). The change in the fair value of these invested assets was $15 increase and $37 increase for the three and nine months ended September 30, 2023, respectively ($94 decrease during the year ended December 31, 2022).
(5) Includes short-term securities with maturities of less than one year at acquisition amounting to $5,897 (December 31, 2022 – $4,148), cash equivalents with maturities of less than 90 days at acquisition amounting to $9,543 (December 31, 2022 – $8,711) and cash of $6,697 (December 31, 2022 – $5,582).
(6) Debt securities include securities which were acquired with maturities of less than one year and less than 90 days of $1,054 and $593, respectively (December 31, 2022 – $1,178 and $870, respectively).
(7) Floating rate invested assets above which are subject to interest rate benchmark reform, but have not yet transitioned to replacement reference rates, include debt securities benchmarked to CDOR and AUD BBSW of $156 and $14 (December 31, 2022 – $173 and $15, respectively), and private placements benchmarked to AUD BBSW and NZD BKBM of $190 and $24 (December 31, 2022 – $199 and $43, respectively). USD LIBOR was decommissioned on June 30, 2023. Exposures indexed to CDOR represent floating rate invested assets with maturity dates beyond June 28, 2024. The interest rate benchmark reform is expected to have an impact on the valuation of invested assets whose value is tied to the affected interest rate benchmarks. The Company has assessed its exposure at the contract level, by benchmark and instrument type. The Company is monitoring market developments with respect to alternative reference rates and the time horizon during which they will evolve. As at September 30, 2023, the interest rate benchmark reform has not resulted in significant changes in the Company’s risk management strategy.
(8) Own use property of $2,537 as at September 30, 2023 (December 31, 2022 – $2,682), are underlying items for insurance contracts with direct participating features and are measured at fair value as if they were investment properties, as permitted by IFRS 17. Own use property of $167 (December 31, 2022 – $170) is carried at cost less accumulated depreciation and any accumulated impairment losses.
(9) Alternative long-duration assets ("ALDA") include investments in private equity of $15,549, infrastructure of $14,681, timber and agriculture of $6,034, energy of $1,889 and various other ALDA of $3,299 (December 31, 2022 – $14,153, $12,751, $5,979, $2,347 and $3,230, respectively).

</tbody>
</table>

<sup>(1)</sup> For real estate properties, the significant unobservable inputs are capitalization rates (ranging from 2.72% to 10.00% during the nine months ended September 30, 2023 and ranging from 2.25% to 9.00% during the year ended December 31, 2022), terminal capitalization rates (ranging from 3.00% to 10.00% during the nine months ended September 30, 2023 and ranging from 3.25% to 9.50% during the year ended December 31, 2022) and discount rates (ranging from 3.20% to 14.00% during the nine months ended September 30, 2023 and ranging from 3.30% to 11.00% during the year ended December 31, 2022). Holding other factors constant, a lower capitalization or terminal capitalization rate will tend to increase the fair value of an investment property. Changes in fair value based on variations in unobservable inputs generally cannot be extrapolated because the relationship between the directional changes of each input is not usually linear.

<sup>(2)</sup> Other invested assets measured at fair value are held primarily in infrastructure and timber sectors. The significant inputs used in the valuation of the Company’s infrastructure investments are primarily future distributable cash flows, terminal values and discount rates. Holding other factors constant, an increase to future distributable cash flows or terminal values would tend to increase the fair value of an infrastructure investment, while an increase in the discount rate would have the opposite effect. Discount rates during the period ranged from 7.35% to 15.60% during the nine months ended September 30, 2023 (during the year ended December 31, 2022 – ranged from 7.15% to 15.60%). Disclosure of distributable cash flow and terminal value ranges are not meaningful given the disparity in estimates by project. The significant inputs used in the valuation of the Company’s investments in timberland properties are timber prices and discount rates. Holding other factors constant, an increase to timber prices would tend to increase the fair value of a timberland investment, while an increase in the discount rate would have the opposite effect. Discount rates during the period ranged from 4.00% to 7.00% during the nine months ended September 30, 2023 (during the year ended December 31, 2022 – ranged from 4.25% to 7.00%). A range of prices for timber is not meaningful as the market price depends on factors such as property location and proximity to markets and export yards.

<sup>(3)</sup> Segregated funds net assets are measured at fair value. The Company’s Level 3 segregated funds assets are predominantly investment properties and timberland properties valued as described above.

<sup>(2)</sup> Other invested assets disclosed at fair value include $3,869 (December 31, 2022 – $3,840) of leveraged leases which are disclosed at their carrying values as fair value is not routinely calculated on these investments.
Transfers between Level 1 and Level 2
The Company records transfers of assets and liabilities between Level 1 and Level 2 at their fair values as at the end of each reporting period, consistent with the date of the determination of fair value. Assets are transferred out of Level 1 when they are no longer transacted with sufficient frequency and volume in an active market. Conversely, assets are transferred from Level 2 to Level 1 when transaction volume and frequency are indicative of an active market. During the three and nine months ended September 30, 2023, the Company had $nil and $nil transfers between Level 1 and Level 2 (September 30, 2022 – $nil and $nil).

For segregated funds net assets, during the three and nine months ended September 30, 2023, the Company had $3 and $nil transfers from Level 1 to Level 2 (September 30, 2022 – $nil and $nil). During the three and nine months ended September 30, 2023, the Company had $nil and $nil transfers from Level 2 to Level 1 (September 30, 2022 – $nil and $nil).

Invested assets and segregated funds net assets measured at fair value using significant unobservable inputs (Level 3)
The Company classifies fair values of invested assets and segregated funds net assets as Level 3 if there are no observable markets for these assets or, in the absence of active markets, most significant non-market observable inputs used to determine fair value are based on the Company’s own assumptions about market participant assumptions. The Company prioritizes the use of market-based inputs over entity-based assumptions in determining Level 3 fair values. The gains and losses in the table below include the changes in fair value due to both observable and unobservable factors.
The following table presents the movement in invested assets, net derivatives and segregated funds net assets measured at fair value using significant unobservable inputs (Level 3) for the three months ended September 30, 2023 and 2022.

(1) These amounts are included in net investment income on the Consolidated Statements of Income except for the amount related to segregated funds net assets, where the amount is recorded in investment income related to segregated funds net assets.

(2) These amounts are included in AOCI on the Consolidated Statements of Financial Position.

(3) The Company uses fair values of the assets at the beginning of the period for assets transferred into and out of Level 3 except for derivatives, where the Company uses fair value at the end of the period and at the beginning of the period, respectively.
The following table presents the movement in invested assets, net derivatives and segregated funds net assets measured at fair value using significant unobservable inputs (Level 3) for the nine months ended September 30, 2023 and 2022.

</tbody>
</table>

(1) These amounts are included in net investment income on the Consolidated Statements of Income except for the amount related to segregated funds net assets, where the amount is recorded in investment income related to segregated funds net assets.

(2) These amounts are included in AOCI on the Consolidated Statements of Financial Position.

(3) The Company uses fair values of the assets at the beginning of the year for assets transferred into and out of Level 3 except for derivatives, where the Company uses fair value at the end of the period and at the beginning of the year, respectively.

(4) Private placement bonds of $1,771 with maturity dates beyond 30 years were reclassified from Level 3 to Level 2 in the current period to align with the fair value leveling treatment of public bonds.

Transfers into Level 3 primarily result from securities that were impaired during the periods or securities where a lack of observable market data (versus the previous period) resulted in reclassifying assets into Level 3. Transfers from Level 3 primarily result from observable market data becoming available for the entire term structure of the debt security.
(d) Remaining term to maturity

The following table presents remaining term to maturity for invested assets.

<sup>(1)</sup> Represents contractual maturities. Actual maturities may differ due to prepayment privileges in the applicable contract.

<sup>(2)</sup> Primarily includes equity method accounted investments and leveraged leases.
Note 4 Derivative and Hedging Instruments

Derivatives are financial contracts, the value of which is derived from a variety of factors described in note 4 (a). The Company uses derivatives including swaps, forward and futures agreements, and options to manage current and anticipated exposures to changes in interest rates, foreign exchange rates, commodity prices and equity market prices, and to replicate exposure to different types of investments.

Swaps are contractual agreements between the Company and a third party to exchange a series of cash flows based upon rates applied to a notional amount. For interest rate swaps, counterparties generally exchange fixed or floating interest rate payments based on a notional value in a single currency. Cross currency swaps involve the exchange of principal amounts between parties as well as the exchange of interest payments in one currency for the receipt of interest payments in another currency. Total return swaps are contracts that involve the exchange of payments based on changes in the values of a reference asset, including any returns such as interest earned on these assets, in return for amounts based on reference rates specified in the contract.

Forward and futures agreements are contractual obligations to buy or sell a financial instrument, foreign currency or other underlying commodity on a predetermined future date at a specified price. Forward contracts are OTC contracts negotiated between counterparties, whereas futures agreements are contracts with standard amounts and settlement dates that are traded on regulated exchanges.

Options are contractual agreements whereby the holder has the right, but not the obligation, to buy (call option) or sell (put option) a security, exchange rate, interest rate, or other financial instrument at a predetermined price/rate within a specified time.

See variable annuity dynamic hedging strategy in the “Risk Management and Risk Factors” section of the MD&A in the Company’s 2022 Annual Report for an explanation of the Company’s dynamic hedging strategy for its variable annuity product guarantees.

(a) Fair value of derivatives
The pricing models used to value derivatives are based on market standard valuation methodologies and the inputs to these models are consistent with what a market participant would use when pricing the instruments. Derivative valuations can be affected by changes in interest rates, foreign exchange rates, financial indices, commodity prices or indices, credit spreads, default risk (including the counterparties to the contract), and market volatility. The significant inputs to the pricing models for most derivatives are inputs that are observable or can be corroborated by observable market data and are classified as Level 2. Inputs that are observable generally include interest rates, foreign exchange rates and interest rate curves. However, certain derivatives may rely on inputs that are significant to the fair value that are not observable in the market or cannot be derived principally from, or corroborated by, observable market data and these derivatives are classified as Level 3. Inputs that are unobservable generally include broker quoted prices, volatilities and inputs that are outside of the observable portion of the interest rate curve or other relevant market measures. These unobservable inputs may involve significant management judgment or estimation. Even though unobservable, these inputs are based on assumptions deemed appropriate given the circumstances and consistent with what market participants would use when pricing such instruments. The credit risk of both the counterparty and the Company are considered in determining the fair value for all derivatives after considering the effects of netting agreements and collateral arrangements.
The following table presents gross notional amount and fair value of derivative instruments by the underlying risk exposure.

The total notional amount above includes $79 billion (December 31, 2022 – $211 billion) of derivative instruments which reference rates that are impacted under the interest rate benchmark reform, with a significant majority to CDOR. USD LIBOR was decommissioned on June 30, 2023. Exposures indexed to CDOR represent derivatives with a maturity date beyond June 28, 2024. Upon adoption of IFRS 9, the Company designated additional existing derivatives in hedge accounting relationships. The exposure in the Company’s hedge accounting programs is primarily to the CDOR benchmark. Compared to the overall risk exposure, the effect of interest rate benchmark reform on existing accounting hedges is not significant. The Company continues to apply high probability and high effectiveness expectation assumptions for cash flows and there would be no automatic de-designation of qualifying hedge relationships due to the impact from interest rate benchmark reform.

The following table presents the fair values of the derivative instruments by the remaining term to maturity. Fair values disclosed below do not incorporate the impact of master netting agreements (refer to note 7).
The following table presents gross notional amount by the remaining term to maturity, total fair value (including accrued interest), credit equivalent amount and capital requirement by contract type.

</table>

(1) Credit equivalent amount is the sum of replacement cost and the potential future credit exposure less any collateral held. Replacement cost represents the current cost of replacing all contracts with a positive fair value. The amounts take into consideration legal contracts that permit offsetting of positions. The potential future credit exposure is calculated based on a formula prescribed by OSFI.

(2) Capital requirement represents the credit equivalent amount, weighted according to the creditworthiness of the counterparty, as prescribed by OSFI.

The total notional amount of $434 billion (December 31, 2022 – $396 billion) includes $82 billion (December 31, 2022 – $77 billion) related to derivatives utilized in the Company’s variable annuity guarantee dynamic hedging. Due to the Company’s variable annuity hedging practices, many trades are in offsetting positions, resulting in materially lower net fair value exposure for the Company than what the gross notional amount would suggest.
The average rate of the hedging instruments in hedge relationships that do not frequently reset is presented as below:

Movement in net derivatives measured at fair value using significant unobservable inputs (Level 3) is presented in note 3 (c).
(b) Hedge accounting relationships
The Company uses derivatives for economic hedging purposes. In certain circumstances, these hedges also meet the requirements of hedge accounting and designating derivatives in qualifying hedge accounting relationships achieves the desired IFRS presentation. Risk management strategies eligible for hedge accounting are designated as fair value hedges, cash flow hedges or net investment hedges.

At the inception of a hedge accounting relationship, the Company documents the relationship between hedging instrument and hedged item, its risk management objective, and its strategy for undertaking the hedge. At hedge inception and on an ongoing basis, an assessment is performed and documented to demonstrate that the hedging relationship qualifies for hedge accounting. In order to qualify for hedge accounting, there has to be an economic relationship between the hedging instrument and the hedged item, an assessment that the effect of credit risk does not dominate the economic relationship, and the hedge ratio between the hedging instrument and the hedged item will be based on the approach used by risk management, unless the hedge ratio used by risk management results in an imbalance that would create hedge ineffectiveness that is inconsistent with the purpose of hedge accounting.

- The Company designates a specific risk component or a combination of risk components as the hedged risk, including benchmark interest rate, foreign exchange rate, equity price and consumer price index components. All these risk components are observable in the relevant market environment and the changes in fair value or variability in cash flows attributable to these risk components can be reliably measured for hedged items. The hedged risk is generally the most significant risk component of the overall changes in fair value or in cash flows. The Company acquires derivatives for economic hedging purposes with underlying characteristics that offset the hedged risk, based on the risk management strategy.

- The Company executes hedging derivatives with counterparties with high credit quality and monitors the creditworthiness of the counterparties to ensure they are expected to meet cash flow obligations on the hedging instruments as they come due, and that the probability of counterparty default is remote. Further, changes in the Company’s own credit risk are immaterial and have insignificant impact to the hedging relationship.

- A hedge ratio is calculated as the ratio between the quantity of the hedged item that the Company hedges and the quantity of the hedging instrument the Company uses to hedge that quantity of hedged item.
  - For group fair value hedges of interest rate risk of insurance liabilities and group fair value hedges of foreign exchange and interest rate risk of foreign currency denominated debt instruments, the Company constructs the hedge relationship by comparing interest rate sensitivities of the group of hedging derivatives and the group of hedged items in the same currency. Interest rate sensitivities are compared by estimating the change in the present value of cash flows of hedged items and hedging derivatives from an instantaneous shock to interest rates, assuming no rebalancing actions are undertaken.
  - For the rest of the Company’s hedge accounting relationships, the Company generally constructs the hedge relationships by comparing the notional amounts of the hedging derivatives with that of the hedged items.

Hedge ineffectiveness in various hedging relationships may still exist and potential sources of hedge ineffectiveness by risk category are summarized as below:

<table>

Hedging relationships that frequently reset
The Company uses a portfolio of derivatives as a fair value hedge of foreign exchange rate and interest rate fluctuations of fixed rate debt instruments denominated in non-functional currencies, as well as interest rate fluctuations of guaranteed insurance liabilities. The risk management objective is to hedge these foreign exchange and interest rate fluctuations with a hedge horizon of three months. At the end of each hedge horizon, the hedging relationships mature; and new fair value hedging relationships will be designated with a new pool of hedging instruments and hedged items.

Fair value hedges
The Company uses interest rate swaps to manage its exposure to changes in the fair value of fixed rate financial instruments and guaranteed insurance liabilities due to changes in interest rates. The Company also uses cross currency swaps to manage its exposure to foreign exchange rate fluctuations, interest rate fluctuations, or both.

The Company recognizes gains and losses on derivatives and the related hedged items in fair value hedges in Total investment result. These investment gains (losses) are shown in the following table.

<table>
<thead>
<tr>
<th>For the nine months ended September 30, 2023</th>

(1) The carrying amounts for hedged items presented are related to hedged items in active hedging relationships as at the reporting date. Out of the $9,390 related to assets, $9,360 relates to new hedge relationships designated under IFRS 9 and accordingly no amounts are presented for the comparative period. Further, $26,825 related to liabilities are new hedge relationships designated under IFRS 9 and accordingly no amounts are presented for the comparative period.

(2) Represents existing hedges designated under IAS 39.

Cash flow hedges
The Company uses interest rate swaps to hedge the variability in cash flows from variable rate financial instruments and forecasted transactions. The Company also uses cross currency swaps and foreign currency forward contracts to hedge the variability from foreign currency financial instruments and foreign currency expenses. Total return swaps are used to hedge the variability in cash flows associated with certain stock-based compensation awards. Inflation swaps are used to reduce inflation risk generated from inflation-indexed liabilities.
The effects of derivatives in cash flow hedging relationships on the Consolidated Statements of Income and the Consolidated Statements of Comprehensive Income are shown in the following table. The effective portion of the change in fair value of hedging instruments associated with the CPI cash flow hedge accounting program is presented in AOCI, in the same line as the hedged item – Insurance finance income (expense). The AOCI balances of $67 as at September 30, 2023 (December 31, 2022 – $86) are all related to continuing cash flow hedges, of which $105 (December 31, 2022 – $nil) related to CPI cash flow hedges that were reported in AOCI – Insurance finance income (expense). There is $nil balance in AOCI related to de-designated hedges as at September 30, 2023 and December 31, 2022, respectively.

For the nine months ended September 30, 2023

(1) Gains (losses) deferred in AOCI on derivatives are presented in AOCI under Insurance finance income (expense).

The Company anticipates that net losses of approximately $30 will be reclassified from AOCI to net income within the next 12 months. The maximum time frame for which variable cash flows are hedged is 13 years with exception to CPI hedge relationships where the maximum time frame for which variable cash flows are hedged is 29 years.

Hedges of net investments in foreign operations

The Company may use non-functional currency denominated long-term debt, forward currency contracts, and cross currency swaps to mitigate the foreign exchange translation risk of net investments in foreign operations. Refer to note 8.
The effects of net investment hedging relationships on the Consolidated Statements of Income and the Consolidated Statements of Other Comprehensive Income are shown in the following table.

Cost of hedging

The Company has elected to apply cost of hedging guidance retrospectively for certain hedging relationships existing on January 1, 2023. The excluded components from hedging relationships related to forward elements and foreign currency basis spreads are presented in AOCI as cost of hedging. The following table provides details of the movement in the cost of hedging by hedged risk category.

<table>

(c) Derivatives not designated in qualifying hedge accounting relationships

The Company uses derivatives to economically hedge various financial risks, however, not all derivatives qualify for hedge accounting and in some cases, the Company has not elected to apply hedge accounting. As noted above, upon adoption of IFRS 9, the Company has designated additional existing derivatives in hedge accounting relationships. Below are the investment income impacts of derivatives not designated in qualifying hedge accounting relationships.

Investment income (loss) on derivatives not designated in qualifying hedge accounting relationships

(d) Embedded derivatives
Certain insurance contracts contain features that are classified as embedded derivatives and are measured separately at FVTPL, including reinsurance contracts related to guaranteed minimum income benefits and contracts containing certain credit and interest rate features.

Certain reinsurance contracts related to guaranteed minimum income benefits contain embedded derivatives requiring separate measurement at FVTPL as the financial component contained in the reinsurance contracts does not contain significant insurance risk. Claims recovered under reinsurance ceded contracts offset claims expenses and claims paid on the reinsurance assumed. As at September 30, 2023, reinsurance ceded guaranteed minimum income benefits had a fair value of $401 (December 31, 2022 – $535) and reinsurance assumed guaranteed minimum income benefits had a fair value of $44 (December 31, 2022 – $58).

The Company’s credit and interest rate embedded derivatives promise to pay the returns on a portfolio of assets to the contract holder. These embedded derivatives contain credit and interest rate risks that are financial risks embedded in the underlying insurance contract. As at September 30, 2023, these embedded derivative liabilities had a fair value of $334 (December 31, 2022 – $395).

Other insurance contract features which are classified as embedded derivatives but are exempt from separate measurement at fair value include variable universal life and variable life products’ minimum guaranteed credited rates, no lapse guarantees, guaranteed annuitization options, CPI indexing of benefits, and segregated fund minimum guarantees other than reinsurance ceded/assumed guaranteed minimum income benefits. These embedded derivatives are measured and reported within insurance contract liabilities and are exempt from separate fair value measurement as they contain insurance risk and/or are closely related to the insurance host contract.

Note 5 Insurance and Reinsurance Contract Assets and Liabilities

(a) Movements in carrying amounts of insurance and reinsurance contracts
The following tables present the movement in the net carrying amounts of insurance contracts issued and reinsurance contracts held during the period for each reporting segment. The changes include amounts that are recognized in income and OCI, and movements due to cash flows.

There are two types of tables presented:

- Tables which analyze movements in the net assets or liabilities for remaining coverage and for incurred claims separately and reconcile them to the relevant Consolidated Statements of Income and Consolidated Statements of Comprehensive Income line items.
- Tables which analyze movements of contracts by measurement components including estimates of the present value of future cash flows, risk adjustment and CSM for portfolios.
Insurance contracts

</table>
(e) Amortization of contractual service margin
The CSM represents the unearned profit for a group of insurance contracts which the Company will recognize in insurance revenue as it provides insurance services in the period. The amortization of the CSM as insurance revenue is determined by (1) identifying the coverage units in the group, (2) allocating the CSM at the end of the period (before amortizing any amounts in insurance revenue in the current period) equally to each coverage unit provided in the period and expected to be provided in future periods, and (3) recognizing in insurance revenue the amount allocated to coverage units provided in the current period.

The number of coverage units is the quantity of services provided by the contracts in the group, determined by considering for each contract the quantity of benefits provided and its expected coverage period. The coverage units are reviewed and updated at each reporting date.

(1) Non-insurance includes consolidations and eliminations of transactions between operating segments.
(g) Significant judgements and estimates

(I) Fulfilment cash flows

Fulfilment cash flows have three major components:

- Estimate of future cash flows
- An adjustment to reflect the time value of money and the financial risk related to future cash flows if not included in the estimate of future cash flows
- A risk adjustment for non-financial risk

The determination of insurance fulfilment cash flows involves the use of estimates and assumptions. A comprehensive review of valuation assumptions and methods is performed annually. The review reduces the Company’s exposure to uncertainty by ensuring assumptions for liability risks remain appropriate. This is accomplished by monitoring experience and updating assumptions which represent a best estimate of expected future experience, and margins that are appropriate for the risks assumed. While the assumptions selected represent the Company’s current best estimates and assessment of risk, the ongoing monitoring of experience and the changes in economic environment are likely to result in future changes to the actuarial assumptions, which could materially impact the insurance contract liabilities.

Method used to measure insurance & reinsurance contract fulfilment cash flows

The Company primarily uses deterministic projections using best estimate assumptions to determine the present value of future cash flows. For product features such as universal life minimum crediting rates guarantees, participating life zero dividend floor implicit guarantees and variable annuities guarantees, the Company developed a stochastic approach to capture the asymmetry of the risk.

Determination of assumptions used

For the deterministic projections, assumptions are made with respect to mortality, morbidity, rates of policy termination, operating expenses and certain taxes. Actual experience is monitored to ensure that assumptions remain appropriate and assumptions are changed as warranted. Assumptions are discussed in more detail in the following table.

<table>
<thead>
<tr>
<th>Nature of factors and assumption methodology</th>
<th>Risk management</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mortality</td>
<td>The Company maintains underwriting standards to determine the insurability of applicants. Claim trends are monitored on an ongoing basis. Exposure to large claims is managed by establishing policy retention limits, which vary by market and geographic location. Policies in excess of the limits are reinsured with other companies. Mortality is monitored monthly.</td>
</tr>
<tr>
<td>Morbidity</td>
<td>The Company maintains underwriting standards to determine the insurability of applicants. Claim trends are monitored on an ongoing basis. Exposure to large claims is managed by establishing policy retention limits, which vary by market and geographic location. Policies in excess of the limits are reinsured with other companies. Morbidity is also monitored monthly.</td>
</tr>
<tr>
<td><strong>Policy termination</strong></td>
<td>Policies are terminated through lapses and surrenders, where lapses represent the termination of policies due to non-payment of premiums and surrenders represent the voluntary termination of policies by policyholders. Premium persistency represents the level of ongoing deposits on contracts where there is policyholder discretion as to the amount and timing of deposits. Policy termination and premium persistency assumptions are primarily based on the Company’s recent experience adjusted for expected future conditions. Assumptions reflect differences by type of contract within each geographic market.</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Directly attributable expenses</strong></td>
<td>Directly attributable operating expense assumptions reflect the projected costs of maintaining and servicing in-force policies, including associated directly attributable overhead expenses. The directly attributable expenses are derived from internal cost studies projected into the future with an allowance for inflation. For some developing businesses, there is an expectation that unit costs will decline as these businesses grow. Directly attributable acquisitions expenses are derived from internal cost studies.</td>
</tr>
<tr>
<td><strong>Tax</strong></td>
<td>Taxes reflect assumptions for future premium taxes and other non-income related taxes.</td>
</tr>
<tr>
<td><strong>Policyholder dividends, experience rating refunds, and other adjustable policy elements</strong></td>
<td>The best estimate projections for policyholder dividends and experience rating refunds, and other adjustable elements of policy benefits are determined to be consistent with management’s expectation of how these elements will be managed should experience emerge consistently with the best estimate assumptions.</td>
</tr>
</tbody>
</table>

The Company reviews actuarial methods and assumptions on an annual basis. If changes are made to non-economic assumptions, the impact based on locked-in economic assumptions would adjust the contractual service margin for general model and VFA contracts if there is any remaining contractual service margin for the group of policies where the change was made. This amount would then be recognized in income over the period of service provided. Changes could also impact net income and other comprehensive income to the extent that the contractual service margin has been depleted, or discount rates are different than the locked-in rates used to quantify changes to the contractual service margin.

(II) **Determination of discretionary changes**

The terms of some contracts measured under the GMM give the Company discretion over the cash flows to be paid to the policyholders, either in their timing or in their amount. Changes in discretionary cash flows are regarded as relating to future service and accordingly adjust the CSM. The Company determines how to identify a change in discretionary cash flows by specifying the basis on which it expects to determine its commitment under the contract; for example, based on a fixed interest rate, or on returns that vary based on specified asset returns. This determination is specified at the inception of the contract.
(III) Discount rates

Insurance contract cash flows for non-participating business are discounted using risk free yield curves adjusted by an illiquidity premium to reflect the liquidity characteristics of the liabilities. Cash flows that vary based on returns of underlying items are adjusted to reflect their variability under these adjusted yield curves. Each yield curve is interpolated between the spot rate at the last observable market data point and an ultimate spot rate which reflects the long-term real interest rate plus inflation expectations.

For participating business, insurance contract cash flows that vary based on the return of underlying items are discounted at rates reflecting that variability.

For insurance contracts with cash flows that vary with the return of underlying items and where the present value is measured by stochastic modelling, cash flows are both projected and discounted at scenario specific rates, calibrated on average to be the risk free yield curves adjusted for liquidity.

The spot rates used for discounting liability cash flows are presented in the following table and include illiquidity premiums determined with reference to net asset spreads indicative of the liquidity characteristics of the liabilities by geography.

Amounts presented in income for policies where changes in assumptions that relate to financial risk do not have a substantial impact on amounts paid to policyholders reflect discount rates locked in beginning with the adoption of IFRS 17 or locked in at issue for later insurance contracts. These policies include term insurance, guaranteed whole life insurance, and health products including critical illness and long-term care. For policies where changes in assumptions to financial risk have a substantial impact on amounts paid to policyholders, discount rates are updated as future cash flows change due to changes in financial risk, so that the amount presented in income from future changes in financial variables is $nil. These policies include adjustable universal life contracts. Impacts from differences between current period rates and discount rates used to determine income are presented in other comprehensive income.

(IV) Risk adjustment and confidence level used to determine risk adjustment

Risk adjustment for non-financial risk represents the compensation an entity requires for bearing the uncertainty about the amount and timing of the cash flows that arises from non-financial risk as the entity fulfils insurance contracts. The risk adjustment process considers insurance, lapse and expense risks, includes both favourable and unfavourable outcomes, and reflects diversification benefits from insurance contracts issued.

The Company has estimated the risk adjustment using a margin approach. This approach applies a margin for adverse deviation, typically in terms of a percentage of best estimate assumptions, where future cash flows are uncertain. The resulting cash flows are discounted at rates consistent with the best estimate cash flows to arrive at the total risk adjustment. The ranges for these margins are set by the Company and reviewed periodically.

The risk adjustment for non-financial risk for insurance contracts correspond to a 90% – 95% confidence level for all segments.
(V) Investment component, investment-return service and investment-related service
The Company identifies the investment component, investment-return service (contract without direct participation features) and investment-related service (contract with direct participation features) of a contract as part of the product governance process.

Investment components are amounts that are to be paid to the policyholder under all circumstances. Investment components are excluded from insurance revenue and insurance service expenses.

Investment-return services and investment-related services are investment services rendered as part of an insurance contract and are part of the insurance contract services provided to the policyholder.

(VI) Relative weighting of the benefit provided by insurance coverage, investment-return service and investment-related service
The contractual service margin is released into income, when insurance contract services are provided, by using coverage units. Coverage units represent the quantity of service (insurance coverage, investment-return and investment-related services) provided and are determined by considering the benefit provided under the contract and its expected coverage duration. When the relative size of the investment-related service coverage or the investment-return service coverage unit is disproportionate compared to the insurance service coverage unit, or vice-versa, the Company must determine a relative weighting of the services to reflect the delivery of each of those services. The Company identifies the coverage units as part of the product governance process and did not identify contracts where such weighting was required.

(h) Composition of underlying items
The following table sets out the composition and fair value of the underlying items supporting the Company’s liabilities for direct participation contracts.

(i) Insurance and reinsurance contracts contractual obligations – maturity analysis and amounts payable on demand
The table below represents the maturities of the insurance and reinsurance contract liabilities.

| As at December 31, 2022 |
|---|---|---|---|---|---|---|---|
| Payments due by period | Less than 1 year | 1 to 2 years | 2 to 3 years | 3 to 4 years | 4 to 5 years | Over 5 years | Total |
| **Insurance contract liabilities** | | | | | | | |
| (1) | 3,091 | 4,976 | 7,224 | 9,212 | 11,223 | 996,460 | $1,032,186 |
| **Reinsurance contract liabilities** | | | | | | | |
| (1) | 235 | 237 | 250 | 243 | 337 | 5,320 | 6,622 |

(1) Insurance contract liabilities cash flows include estimates related to the timing and payment of death and disability claims, policy surrenders, policy maturities, annuity payments, minimum guarantees on segregated fund products, policyholder dividends, commissions and premium taxes offset by contractual future premiums on in-force contracts and exclude amount from insurance contract liabilities for account of segregated fund holders. These estimated cash flows are based on the best estimate assumptions used in the determination of insurance contract liabilities. These amounts are undiscounted. Reinsurance contract liabilities cash flows include estimates related to the timing and payment of future reinsurance premiums offset by recoveries on in-force reinsurance agreements. Due to the use of assumptions, actual cash flows may differ from these estimates. Cash flows include embedded derivatives measured separately at fair value.
The amounts from insurance contract liabilities that are payable on demand are set out below.

<table>

</tbody>
</table>

The amounts payable on demand represent the policyholders’ cash and/or account values less applicable surrender fees as at the time of the reporting date. Segregated fund insurance net liabilities are excluded from the amounts payable on demand and the carrying amount.

(j) Actuarial methods and assumptions
A comprehensive review of actuarial methods and assumptions is performed annually. The review is designed to reduce the Company’s exposure to uncertainty by ensuring assumptions for liability risks remain appropriate. This is accomplished by monitoring experience and updating assumptions that represent a best estimate of expected future experience, and margins that are appropriate for the risks assumed. While the assumptions selected represent the Company’s best estimates and assessment of risk, the ongoing monitoring of experience and changes in the economic environment are likely to result in future changes to the actuarial assumptions, which could materially impact the insurance contract liabilities.

2023 Review of Actuarial Methods and Assumptions
The completion of the 2023 annual review of actuarial methods and assumptions resulted in a decrease in pre-tax fulfilment cash flows of $347. These changes resulted in an increase in pre-tax net income attributed to shareholders of $27 (a decrease of $14 post-tax), an increase in pre-tax net income attributed to participating policyholders of $58 ($74 post-tax), an increase in CSM of $116, and an increase in pre-tax other comprehensive income of $146 ($110 post-tax).

Since the beginning of 2020, some lines of business have seen impacts to mortality and policyholder behaviour driven by the COVID-19 pandemic. Given the long-term nature of the Company’s assumptions, the Company’s 2023 experience studies have excluded experience that was materially impacted by COVID-19 as this is not seen to be indicative of the levels of actual future claims or lapses.

Canada variable annuity product review
The review of the Company’s variable annuity products in Canada resulted in a decrease in pre-tax fulfilment cash flows of $133.

The decrease was driven by a reduction in investment management fees, partially offset by updates to product assumptions, including surrenders, incidence and utilization, to reflect emerging experience.

Mortality and morbidity updates
Mortality and morbidity updates resulted in an increase in pre-tax fulfilment cash flows of $265.

The increase was driven by a strengthening of incidence rates for certain products in Vietnam to align with emerging experience and updates to mortality assumptions in the Company’s U.S. life insurance business to reflect industry trends, as well as emerging experience. This was partially offset by updates to morbidity assumptions for certain products in Japan to reflect actual experience.

Lapse and policyholder behaviour updates
Updates to lapses and policyholder behaviour assumptions resulted in an increase in pre-tax fulfilment cash flows of $98.

The increase was primarily driven by a detailed review of lapse assumptions for the Company’s universal life level cost of insurance products in Canada, which resulted in a reduction to the lapse rates to align with emerging trends.

Methodology and other updates
Methodology and other updates resulted in a decrease in pre-tax fulfilment cash flows of $577.

The decrease was driven by the impact of cost-of-guarantees for participating policyholders across all segments from annual updates related to parameters, dividend recalibration, and market movements during the year, as well as modelling refinements for certain products in Asia. This was partially offset by a modelling methodology update to project future premiums on the Company’s U.S. life insurance business.

2022 Review of Actuarial Methods and Assumptions
The completion of the 2022 annual review of actuarial methods and assumptions resulted in an increase in pre-tax fulfilment cash flows of $192. These changes resulted in an increase in pre-tax net income attributed to shareholders of $23 ($26 post-tax), a decrease in pre-tax net income attributed to participating policyholders of $26 ($18 post-tax), a decrease in CSM of $279, and an increase in pre-tax other comprehensive income of $90 ($73 post-tax).

Since the beginning of 2020, some lines of business have seen impacts to mortality and policyholder behaviour driven by the COVID-19 pandemic. Given the long-term nature of the Company’s assumptions, the Company’s 2022 experience studies have excluded experience that was materially impacted by COVID-19 as this is not seen to be indicative of the levels of actual future claims or lapses.

Long-term care triennial review

U.S. Insurance completed a comprehensive long-term care ("LTC") experience study. The review included all aspects of claim assumptions, as well as the progress on future premium rate increases. The impact of the LTC review was an increase in pre-tax fulfilment cash flows of $118.

The experience study showed that claim costs established in the Company’s last triennial review remain appropriate in aggregate for the Company’s older blocks of business\(^1\) supported by robust claims data on this mature block. Pre-tax fulfilment cash flows were increased for claim costs on the Company’s newer block of business\(^2\). This was driven by lower active life mortality\(^3\) supported by Company experience and a recent industry study, as well as higher utilization of benefits, which included the impact of reflecting higher inflation in the cost-of-care up to 2022. The Company also reviewed and updated incidence and claim termination assumptions which, on a net basis, provided a partial offset to the increase in pre-tax fulfilment cash flows on active life mortality and utilization. In addition, some policyholders are electing to reduce their benefits in lieu of paying increased premiums which resulted in a reduction in pre-tax fulfilment cash flows.

Experience continues to support the assumptions of both future morbidity and mortality improvement, resulting in no changes to these assumptions.

As of September 30, 2022, the Company had received actual premium increase approvals of $2.5 billion pre-tax (US$1.9 billion pre-tax) on a present value basis since the last triennial review in 2019. This aligns with the full amount assumed in the Company’s pre-tax fulfilment cash flows at that time and demonstrates the Company’s continued strong track record of securing premium rate increases\(^4\). In 2022, the review of future premium increases assumed in fulfilment cash flows resulted in a net $2.5 billion (US$1.9 billion) decrease in pre-tax fulfilment cash flows. This reflects expected future premium increases that are due to the Company’s 2022 review of morbidity, mortality, and lapse assumptions, as well as outstanding amounts from prior state filings. Premium increases averaging approximately 30% will be sought on about one-half of the business, excluding the carryover of 2019 amounts requested. The Company’s assumptions reflect the estimated timing and amount of state approved premium increases.

Mortality and morbidity updates

Mortality and morbidity updates resulted in an increase in pre-tax fulfilment cash flows of $83, driven by updates to morbidity assumptions in Vietnam to align with experience, partially offset by a detailed review of the mortality assumptions for the Company’s Canada insurance business.

\(1\) First generation policies issued prior to 2002.

\(2\) Second generation policies with an average issue date of 2007 and Group policies with an average issue date of 2003.

\(3\) The mortality rate of LTC policyholders who are currently not on claim.

\(4\) Actual experience obtaining premium increases could be materially different than what the Company has assumed, resulting in further increases or decreases in insurance contract liabilities, which could be material.
Lapse and policyholder behaviour updates
Updates to lapses and policyholder behaviour assumptions resulted in an increase in pre-tax fulfilment cash flows of $234.

The Company completed a detailed review of lapse assumptions for Singapore, and increased lapse rates to align with experience on the Company’s index-linked products, which reduced projected future fee income to be received on these products.

The Company also increased lapse rates on Canada’s term insurance products for policies approaching their renewal date, reflecting emerging experience in the Company’s study.

Methodology and other updates
Other updates resulted in a decrease in pre-tax fulfilment cash flows of $243, which included updates to discount rates and policyholder dividends on participating products, as well as various other modelling and projection updates.

(k) Reinsurance transaction
On November 15, 2021 and October 3, 2022, the Company, through its subsidiary John Hancock Life Insurance Company (U.S.A.) (“JHUSA”), entered into reinsurance agreements with Venerable Holdings, Inc. to reinsure a block of legacy U.S. variable annuity (“VA”) policies. Under the terms of the transaction, the Company will retain responsibility for the maintenance of the policies with no intended impact to VA policyholders. The transaction was structured as coinsurance for the general fund liabilities and modified coinsurance for the segregated fund liabilities.

The transaction closed on February 1, 2022 and October 3, 2022, respectively, resulting in a cumulative pre-tax decrease to the contractual service margin of $905, recognized in 2022.

Note 6 Investment Contract Liabilities
Investment contract liabilities are contractual financial obligations of the Company that do not contain significant insurance risk. Those contracts are subsequently measured either at FVTPL or at amortized cost.

As at September 30, 2023, the fair value of investment contract liabilities measured at fair value was $731 (December 31, 2022 – $798). The carrying value and fair value of investment contract liabilities measured at amortized cost were $10,914 and $10,550, respectively (December 31, 2022 – $9,281 and $9,034, respectively). The carrying value and fair value of investment contract liabilities net of reinsurance assets were $10,883 and $10,520, respectively (December 31, 2022 – $9,243 and $8,996, respectively).

Note 7 Risk Management
The Company's policies and procedures for managing risk related to financial instruments and insurance contracts can be found in note 9 of the Company's 2022 Annual Consolidated Financial Statements as well as the denoted text and tables in the “Risk Management and Risk Factors” section of the Company’s MD&A in the Company's 2022 Annual Report.

(a) Risk disclosures included in the Third Quarter 2023 MD&A
Market risk sensitivities related to variable annuity and segregated fund guarantees, publicly traded equity performance risk, interest rate and spread risk and alternative long-duration asset performance risk are disclosed in denoted text and tables in the “Risk Management and Risk Factors” section of the Third Quarter 2023 MD&A. These disclosures are in accordance with IFRS 7 “Financial Instruments: Disclosures” and IAS 34 “Interim Financial Reporting” and are an integral part of these Interim Consolidated Financial Statements. The risks to which the Company is exposed at the end of the reporting period are representative of risks it is typically exposed to throughout the reporting period.
(b) Credit risk

Credit risk is the risk of loss due to inability or unwillingness of a borrower, or counterparty, to fulfill its payment obligations. Worsening regional and global economic conditions, segment or industry sector challenges, or company specific factors could result in defaults or downgrades and could lead to increased provisions or impairments related to the Company's general fund invested assets.

The Company's exposure to credit risk is managed through risk management policies and procedures which include a defined credit evaluation and adjudication process, delegated credit approval authorities and established exposure limits by borrower, corporate connection, credit rating, industry and geographic region. The Company measures derivative counterparty exposure as net potential credit exposure, which takes into consideration mark-to-market values of all transactions with each counterparty, net of any collateral held, and an allowance to reflect future potential exposure. Reinsurance counterparty exposure is measured reflecting the level of ceded liabilities.

The Company also ensures where warranted, that mortgages, private placements and loans to Bank clients are secured by collateral, the nature of which depends on the credit risk of the counterparty.

Credit risk associated with derivative counterparties is discussed in note 7(e).
(I) Credit quality

The following table presents the gross carrying amount of financial instruments subject to credit exposure, without considering any collateral held or other credit enhancements, and other significant credit risk exposures from loan commitments, presenting separately Stage 1, Stage 2, and Stage 3 allowances.

(c) Securities lending, repurchase and reverse repurchase transactions
As at September 30, 2023, the Company had loaned securities (which are included in invested assets) with a market value of $1,067 (December 31, 2022 – $723). The Company holds collateral with a current market value that exceeds the value of securities lent in all cases.

As at September 30, 2023, the Company had engaged in reverse repurchase transactions of $504 (December 31, 2022 – $895) which are recorded as short-term receivables. In addition, the Company had engaged in repurchase transactions of $504 as at September 30, 2023 (December 31, 2022 – $895) which are recorded as payables.

(d) Credit default swaps
The Company replicates exposure to specific issuers by selling credit protection via credit default swaps (“CDS”) to complement its cash debt securities investing. The Company does not write CDS protection more than its government bond holdings.

The following table presents details of the credit default swap protection sold by type of contract and external agency rating for the underlying reference security.

</tbody>
</table>

(1) Notional amounts represent the maximum future payments the Company would have to pay its counterparties assuming a default of the underlying credit and zero recovery on the underlying issuer obligations.

(2) The weighted average maturity of the CDS is weighted based on notional amounts.

(3) Ratings are based on S&P where available followed by Moody’s, DBRS, and Fitch. If no rating is available from a rating agency, an internally developed rating is used.

(4) The Company held no purchased credit protection as at September 30, 2023 and December 31, 2022.
(e) Derivatives
The Company's point-in-time exposure to losses related to credit risk of a derivative counterparty is limited to the amount of any net gains that may have accrued with the particular counterparty. Gross derivative counterparty exposure is measured as the total fair value (including accrued interest) of all outstanding contracts in a gain position excluding any offsetting contracts in a loss position and the impact of collateral on hand. The Company limits the risk of credit losses from derivative counterparties by: using investment grade counterparties, entering into master netting arrangements which permit the offsetting of contracts in a loss position in the case of a counterparty default, and entering into Credit Support Annex agreements whereby collateral must be provided when the exposure exceeds a certain threshold.

All contracts are held with or guaranteed by investment grade counterparties, the majority of whom are rated A- or higher. As at September 30, 2023, the percentage of the Company’s derivative exposure with counterparties rated AA- or higher was 38 per cent (December 31, 2022 – 36 per cent). As at September 30, 2023, the largest single counterparty exposure, without taking into consideration the impact of master netting agreements or the benefit of collateral held, was $2,034 (December 31, 2022 – $1,582). The net exposure to this counterparty, after taking into consideration master netting agreements and the fair value of collateral held, was $nil (December 31, 2022 – $nil).

(f) Offsetting financial assets and financial liabilities
Certain derivatives, securities lent and repurchase agreements have conditional offset rights. The Company does not offset these financial instruments in the Consolidated Statements of Financial Position, as the rights of offset are conditional.

In the case of derivatives, collateral is collected from and pledged to counterparties and clearing houses to manage credit risk exposure in accordance with Credit Support Annexes to swap agreements and clearing agreements. Under master netting agreements, the Company has a right of offset in the event of default, insolvency, bankruptcy or other early termination.

In the case of reverse repurchase and repurchase transactions, additional collateral may be collected from or pledged to counterparties to manage credit exposure according to bilateral reverse repurchase or repurchase agreements. In the event of default by a reverse purchase transaction counterparty, the Company is entitled to liquidate the collateral held to offset against the same counterparty's obligation.
The following table presents the effect of conditional master netting and similar arrangements. Similar arrangements may include global master repurchase agreements, global master securities lending agreements, and any related rights to financial collateral pledged or received.

</tbody>
</table>

⁽¹⁾ Financial assets and liabilities include accrued interest of $570 and $879, respectively (December 31, 2022 – $488 and $862, respectively).

⁽²⁾ Financial and cash collateral exclude over-collateralization. As at September 30, 2023, the Company was over-collateralized on OTC derivative assets, OTC derivative liabilities, securities lending and reverse repurchase agreements and repurchase agreements in the amounts of $851, $2,216, $269 and $nil, respectively (December 31, 2022 – $507, $1,528, $63 and $nil, respectively). As at September 30, 2023, collateral pledged (received) does not include collateral-in-transit on OTC instruments or initial margin on exchange traded contracts or cleared contracts.

⁽³⁾ Includes derivative contracts entered between the Company and its unconsolidated financing entity. The Company does not exchange collateral on derivative contracts entered with this entity.

The Company also has certain credit linked note assets and variable surplus note liabilities which have unconditional offsetting rights. Under the netting agreements, the Company has rights of offset including in the event of the Company’s default, insolvency, or bankruptcy. These financial instruments are offset in the Consolidated Statements of Financial Position.
A credit linked note is a debt instrument the term of which, in this case, is linked to a variable surplus note. A surplus note is a subordinated debt obligation that often qualifies as surplus (the U.S. statutory equivalent of equity) by some U.S. state insurance regulators. Interest payments on surplus notes are made after all other contractual payments are made. The following table presents the effect of unconditional netting.

\(^{(1)}\) These U.S. dollar senior notes have been designated as hedges of the Company’s net investment in its U.S. operations which reduces the earnings volatility that would otherwise arise from the re-measurement of these senior notes into Canadian dollars.

(b) Fair value measurement

Fair value of long-term debt instruments is determined using the following hierarchy:

Level 1 – Fair value is determined using quoted market prices where available.

Level 2 – When quoted market prices are not available, fair value is determined with reference to quoted prices of similar debt instruments or estimated using discounted cash flows based on observable market rates.

The Company measures long-term debt at amortized cost in the Consolidated Statements of Financial Position. As at September 30, 2023, the fair value of long-term debt was $5,363 (December 31, 2022 – $5,587). Fair value of long-term debt was determined using Level 2 valuation techniques (December 31, 2022 – Level 2).

</table>

(1) The Company is monitoring regulatory and market developments globally with respect to the interest rate benchmark reform. As these rates could potentially be discontinued in the future, the Company will take appropriate actions in due course to accomplish the necessary transitions or replacements. As at September 30, 2023, capital instruments of $647 (December 31, 2022 – $647) have interest rate referencing CDOR. In addition, capital instruments of $2,743, $1,195, $1,012 and $495 (December 31, 2022 – $3,343, $nil, $1,013, and $504, respectively) have interest rate reset in the future referencing CDOR, CORRA, the USD Mid-Swap rate, and the SGD swap rate, respectively.

(2) Issued by MFC during the first quarter, interest is payable semi-annually. After March 10, 2028, the interest rate will reset to equal the Daily Compounded CORRA plus 1.85%. With regulatory approval, MFC may redeem the debentures, in whole, or in part, on or after March 10, 2028, at a redemption price together with accrued and unpaid interest.

(3) Designated as a hedge of the Company’s net investment in its U.S. operations which reduces the earnings volatility that would otherwise arise from the re-measurement of the subordinated notes into Canadian dollars.

(4) MFC redeemed in full the 3.317% MFC Subordinated debentures at par, on May 9, 2023, the earliest par redemption date.

(b) Fair value measurement

Fair value of capital instruments is determined using the following hierarchy:

Level 1 – Fair value is determined using quoted market prices where available.

Level 2 – When quoted market prices are not available, fair value is determined with reference to quoted prices of similar debt instruments or estimated using discounted cash flows based on observable market rates.

The Company measures capital instruments at amortized cost in the Consolidated Statements of Financial Position. As at September 30, 2023, the fair value of capital instruments was $6,330 (December 31, 2022 – $5,737). Fair value of capital instruments was determined using Level 2 valuation techniques (December 31, 2022 – Level 2).

</table>

(1) Holders of Class A and Class 1 preferred shares are entitled to receive non-cumulative preferential cash dividends on a quarterly basis, as and when declared by the Board of Directors. Non-deferrable distributions are payable to all LRCN holders semi-annually at the Company’s discretion.

(2) Redemption of all preferred shares is subject to regulatory approval. MFC may redeem each series, in whole or in part, at par, on the earliest redemption date or every five years thereafter, except for Class A Series 2, Class A Series 3 and Class 1 Series 4 preferred shares. Class A Series 2 and Series 3 preferred shares are past their respective earliest redemption date and MFC may redeem these preferred shares, in whole or in part, at par at any time, subject to regulatory approval, as noted. MFC may redeem the Class 1 Series 4 preferred shares, in whole or in part, at any time, at $25.00 per share if redeemed on June 19, 2026 (the earliest redemption date) and on June 19 every five years thereafter, or at $25.50 per share if redeemed on any other date after June 19, 2021, subject to regulatory approval, as noted.

(3) Redemption of all LRCN series is subject to regulatory approval. MFC may at its option redeem each series in whole or in part, at a redemption price equal to par, together with accrued and unpaid interest. The redemption period for Series 1 is every five years during the period from May 19 and including June 19, commencing in 2026. The redemption period for Series 2 is every five years during the period from February 19 and including March 19, commencing in 2027. After the first redemption date, the redemption period for Series 3 is every five years during the period from May 19 to and including June 19, commencing in 2032.

(4) Net of after-tax issuance costs.

(5) On the earliest redemption date and every five years thereafter, the annual dividend rate will be reset to the five-year Government of Canada bond yield plus a yield specified for each series. The specified yield for Class 1 preferred shares is: Series 3 – 1.41%, Series 9 – 2.86%, Series 11 – 2.61%, Series 13 – 2.22%, Series 15 – 2.16%, Series 17 – 2.36%, Series 19 – 2.30%, and Series 25 – 2.55%.

(6) On the earliest redemption date and every five years thereafter, Class 1 preferred shares are convertible at the option of the holder into a new series that is one number higher than their existing series, and the holders are entitled to non-cumulative preferential cash dividends, payable quarterly if and when declared by the Board of Directors, at a rate equal to the three-month Government of Canada Treasury bill yield plus the rate specified in footnote 5 above.

(7) The floating dividend rate for the Class 1 Series 4 shares equals the three-month Government of Canada Treasury bill yield plus 1.41%.

(8) MFC did not exercise its right to redeem the outstanding Class 1 Shares Series 11 on March 19, 2023, which was the earliest redemption date. The dividend rate was reset as specified in footnote 5 above to an annual fixed rate of 6.195%, for a five-year period commencing on March 20, 2023.

(9) MFC did not exercise its right to redeem the outstanding Class 1 Shares Series 13 on September 19, 2023, which was the earliest redemption date. The dividend rate was reset as specified in footnote 5 above to an annual fixed rate of 6.350%, for a five-year period commencing on September 20, 2023.

(10) MFC did not exercise its right to redeem the outstanding Class 1 Shares Series 25 on June 19, 2023, which was the earliest redemption date. The dividend rate was reset as specified in footnote 5 above to an annual fixed rate of 5.942%, for a five-year period commencing on June 20, 2023.

(11) Non-payment of distributions or principal on any LRCN series notes when due will result in a recourse event. The recourse of each noteholder will be limited to their proportionate amount of the Limited Recourse Trust’s assets which comprise of Class 1 Series 27 preferred shares for LRCN Series 1 notes, Class 1 Series 28 preferred shares for LRCN Series 2 notes, and Class 1 Series 29 preferred shares for LRCN Series 3 notes. All claims of the holders of LRCN series notes against MFC will be extinguished upon receipt of the corresponding trust assets. The Class 1 Series 27, Class 1 Series 28, and Class 1 Series 29 preferred shares are eliminated on consolidation while being held in the Limited Recourse Trust.

(12) The LRCN Series 1 distribute at a fixed rate of 3.7375% payable semi-annually, until June 18, 2026; on June 19, 2026 and every five years thereafter until June 19, 2076, the rate will be reset at a rate equal to the five-year Government of Canada yield as defined in the prospectus, plus 2.839%. The LRCN Series 2 distribute at a fixed rate of 4.10% payable semi-annually, until March 18, 2027; on March 19, 2027 and every five years thereafter until March 19, 2077, the rate will be reset at a rate equal to the five-year Government of Canada yield as defined in the prospectus, plus 2.704%. The LRCN Series 3 distribute at a fixed rate of 7.117% payable semi-annually, until June 18, 2027; on June 19, 2027 and every five years thereafter until June 19, 2077, the rate will be reset at a rate equal to the five-year Government of Canada yield as defined in the prospectus, plus 3.95%. 

Manulife Financial Corporation – Third Quarter 2023 155
(b) Common shares
As at September 30, 2023, there were 19 million outstanding stock options and deferred share units that entitle the holders to receive common shares or payment in cash or common shares, at the option of the holders (December 31, 2022 – 21 million).

<table>
<thead>

</table>

Normal course issuer bid
On February 21, 2023, the Company announced that the Toronto Stock Exchange ("TSX") approved a normal course issuer bid ("NCIB") permitting the purchase for cancellation of up to 55.7 million common shares, representing approximately 3% of its issued and outstanding common shares. Purchases under the NCIB commenced on February 23, 2023 and will continue until February 22, 2024, when the NCIB expires, or such earlier date as the Company completes its purchases.

During the nine months ended September 30, 2023, the Company had purchased 42.6 million shares under the current NCIB commenced on February 23, 2023, and 6.9 million shares under the previous NCIB that expired on February 2, 2023, totaling 49.5 million shares for $1,262. Of this, $590 was recorded in common shares and $672 was recorded in retained earnings in the Consolidated Statements of Changes in Equity.

(c) Earnings per share
The following is a reconciliation of the denominator (number of shares) in the calculation of basic and diluted earnings per common share.

<table>
<thead>
<tr>
<th>For the (in millions)</th>
<th>three months ended September 30,</th>
<th>nine months ended September 30,</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2023</td>
<td>2022</td>
</tr>
<tr>
<td>Weighted average number of common shares</td>
<td>1,826</td>
<td>1,902</td>
</tr>
<tr>
<td>Dilutive stock-based awards(1)</td>
<td>3</td>
<td>2</td>
</tr>
<tr>
<td>Weighted average number of diluted common shares</td>
<td>1,829</td>
<td>1,904</td>
</tr>
</tbody>
</table>

(1) The dilutive effect of stock-based awards was calculated using the treasury stock method. This method calculates the number of incremental shares by assuming the outstanding stock-based awards are (i) exercised and (ii) then reduced by the number of shares assumed to be repurchased from the issuance proceeds, using the average market price of MFC common shares for the period.

Note 11 Revenue from Service Contracts

The Company provides investment management services, transaction processing and administrative services and distribution and related services to proprietary and third-party investment funds, retirement plans, group benefit plans, institutional investors and other arrangements. The Company also provides real estate management services to tenants of the Company’s investment properties.

The Company’s service contracts generally impose single performance obligations, each consisting of a series of similar related services for each customer.

The Company’s performance obligations within service arrangements are generally satisfied over time as the customer simultaneously receives and consumes the benefits of the services rendered, measured using an output method. Fees typically include variable consideration and the related revenue is recognized to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur when the uncertainty is subsequently resolved.
Asset based fees vary with asset values of accounts under management, subject to market conditions and investor behaviors beyond the Company’s control. Transaction processing and administrative fees vary with activity volume, also beyond the Company’s control. Some fees, including distribution fees, are based on account balances and transaction volumes. Fees related to account balances and transaction volumes are measured daily. Real estate management service fees include fixed portions plus recovery of variable costs of services rendered to tenants. Fees related to services provided are generally recognized as services are rendered, which is when it becomes highly probable that no significant reversal of cumulative revenue recognized will occur. The Company has determined that its service contracts have no significant financing components because fees are collected monthly. The Company has no significant contract assets or contract liabilities.

The following tables present revenue from service contracts by service lines and reporting segments as disclosed in note 14. Asia, Canada, and U.S reporting segments are combined with Corporate and Other as a result of the implementation of IFRS 17.

</tbody>
</table>

(1) There are no significant current service costs for the retiree welfare plans as they are closed and mostly frozen. The remeasurement gain or loss on these plans is due to the volatility of discount rates and investment returns.

Note 13 Commitments and Contingencies

(a) Legal proceedings

The Company is regularly involved in legal actions, both as a defendant and as a plaintiff. The legal actions where the Company is a party ordinarily relate to its activities as a provider of insurance protection or wealth management products, reinsurance, or in its capacity as an investment adviser, employer, or taxpayer. Other life insurers and asset managers, operating in the jurisdictions in which the Company does business, have been subject to a wide variety of other types of actions, some of which resulted in substantial judgments or settlements against the defendants; it is possible that the Company may become involved in similar actions in the future. In addition, government and regulatory bodies in Canada, the United States, Asia, and other jurisdictions where the Company conducts business regularly make inquiries and sometimes require the production of information or conduct examinations concerning the Company’s compliance with, among other things, insurance laws, securities laws, and laws governing the activities of broker-dealers.

In June 2018, a class action was initiated against the Company in the U.S. District Court for the Southern District of New York on behalf of owners of Performance Universal Life (“Perf UL”) policies issued between 2003 and 2010 whose policies were subject to a Cost of Insurance (“COI”) increase announced in 2018. The class policies in the COI-increase block made up approximately two-thirds of the total face amount of the policies in the COI-increase block. The class case was settled effective May 17, 2022, and the settlement has been implemented.
In addition to the class action, twelve individual lawsuits opposing the Perf UL COI increases were filed; nine in federal court and three in state court. Each of the lawsuits, except two, have been brought by plaintiffs who own multiple policies. On March 22, 2023, the last group of pending individual federal cases settled, and on September 18, 2023, the last group of individual state cases settled. With the prior settlements, including the May 17, 2022 class action settlement, the Company has now resolved litigation with respect to 100% of the filed lawsuits, which represents 84% of the total face amount of policies in the COI-increase block. Litigation remains possible with the final approximately 16% of the total face amount of the COI-increase block.

(b) Guarantees

(I) Guarantees regarding Manulife Finance (Delaware), L.P. (“MFLP”)
MFC has guaranteed the payment of amounts on the $650 subordinated debentures due on December 15, 2041 issued by MFLP, a wholly owned unconsolidated financing entity.

The following tables present certain condensed consolidated financial information for MFC and MFLP.

(II) Guarantees regarding John Hancock Life Insurance Company (U.S.A.) (“JHUSA”)
Details of guarantees regarding certain securities issued or to be issued by JHUSA are outlined in note 16.

Note 14  Segment and Geographic Reporting

The Company’s reporting segments are Asia, Canada, U.S., Global WAM and Corporate and Other. Each reporting segment is responsible for managing its operating results, developing products, defining strategies for services and distribution based on the profile and needs of its business and market. The Company’s significant product and service offerings by the reporting segments are mentioned below.

Wealth and asset management businesses (Global WAM) – branded as Manulife Investment Management, provides investment advice and innovative solutions to retirement, retail, and institutional clients. Products and services are distributed through multiple distribution channels, including agents and brokers affiliated with the Company, independent securities brokerage firms and financial advisors pension plan consultants and banks.

Insurance and annuity products (Asia, Canada and U.S.) – include a variety of individual life insurance, individual and group long-term care insurance and guaranteed and partially guaranteed annuity products. Products are distributed through multiple distribution channels, including insurance agents, brokers, banks, financial planners and direct marketing. Manulife Bank of Canada offers a variety of deposit and credit products to Canadian customers.
**Corporate and Other Segment** – comprised of investment performance of assets backing capital, net of amounts allocated to operating segments; costs incurred by the corporate office related to shareholder activities (not allocated to the operating segments); financing costs; Property and Casualty Reinsurance Business; and run-off reinsurance operations including variable annuities and accident and health. In addition, consolidations and eliminations of transactions between operating segments are also included.

Effective January 1, 2023, the Company has made a number of changes to the composition of reporting segments to better align its financial reporting with its business strategy and operations. The Company’s international high net worth business was reclassified from the U.S. segment to the Asia segment to reflect the contributions of the Company’s Bermuda operations alongside the high net worth business that is reported in the Company’s Singapore and Hong Kong operations. The Company’s investment in the startup capital of segregated and mutual funds and investment-related revenue and expense were reclassified from the Corporate and Other segment to the Global WAM segment to more closely align with Global WAM’s management practices. Refinements were made to the allocations of corporate overhead and interest on surplus among segments. Prior period comparative information has been restated to reflect the changes in segment reporting.

The following tables present results by reporting segments and by geographical location.

**Note 15 Segregated Funds**

The Company manages a number of segregated funds on behalf of policyholders. Policyholders are provided with the opportunity to invest in different categories of segregated funds that hold a range of underlying investments. The underlying investments consist of both individual investments and mutual funds.

Segregated funds underlying investments may be exposed to a variety of financial and other risks. These risks are primarily mitigated by investment guidelines that are actively monitored by professional and experienced portfolio advisors. The Company is not exposed to these risks beyond the liabilities related to the guarantees associated with certain variable life and annuity products included in segregated funds. Accordingly, the Company’s exposure to loss from segregated fund products is limited to the value of these guarantees.

As at September 30, 2023, these guarantees are recorded within the Company’s insurance contract liabilities amounting to $2,332 (December 31, 2022 – $3,496), of which $1,031 are reinsured (December 31, 2022 – $1,249). Assets supporting these guarantees, net of reinsurance, are recognized in invested assets according to their investment type. “Insurance contract liabilities for account of segregated fund holders” on the Consolidated Statements of Financial Position exclude these guarantees and are considered to be a non-distinct investment component of insurance contract liabilities. The “Risk Management and Risk Factors Update” section of the Third Quarter 2023 MD&A provides information regarding market risk sensitivities associated with variable annuity and segregated fund guarantees.

**Note 16 Information Provided in Connection with Investments in Deferred Annuity Contracts and SignatureNotes Issued or Assumed by John Hancock Life Insurance Company (U.S.A.)**

The following condensed consolidated financial information, presented in accordance with IFRS, and the related disclosure have been included in these Interim Consolidated Financial Statements with respect to JHUSA in compliance with Regulation S-X and Rule 12h-5 of the United States Securities and Exchange Commission (the “Commission”). These financial statements are (i) incorporated by reference in the registration statements of MFC and JHUSA that relate to MFC’s guarantee of certain securities to be issued by JHUSA and (ii) are provided in reliance on an exemption from continuous disclosure obligations of JHUSA. For information about JHUSA, the MFC guarantees and restrictions on the ability of MFC to obtain funds from its subsidiaries by dividend or loan, refer to note 24 to the Company’s 2022 Annual Consolidated Financial Statements.

Rating

Financial strength is a key factor in generating new business, maintaining and expanding distribution relations and providing a base for expansion, acquisitions and growth. As at September 30, 2023, Manulife had total capital of C$71.4 billion, including C$47.4 billion of total shareholders’ and other equity. The Manufacturers Life Insurance Company’s financial strength ratings are among the strongest in the insurance industry. Rating agencies include AM Best Company (“AM Best”), DBRS Limited and affiliated entities (“DBRS Morningstar”), Fitch Ratings Inc. (“Fitch”), Moody’s Investors Service Inc. (“Moody’s”), and S&P Global Ratings (“S&P”).

Consent to receive documents electronically

Electronic documents available from Manulife.

Manulife is pleased to offer Electronic Documents. Access the information when you want, no more waiting for the mail.

The Manulife documents available electronically are:
- Annual Report and Proxy Circular
- Notice of Annual Meeting
- Shareholder Reports

These documents will be available to you on our website www.manulife.com at the same time as they are mailed to other shareholders. Documents relating to the annual meeting, including annual reports, will be available on the website at least until the next version is available.

We will notify you when documents will be available on the website and confirm the instructions for accessing the documents at the same time. In the event that the documents are not available on our website, paper copies will be mailed to you.

This information is also available for viewing or downloading under quarterly reports from the Investor Relations section of our website at www.manulife.com

To receive documents electronically when they are available through Manulife’s electronic delivery service, complete this form and return it as indicated.

I have read and understand the statement on the reverse and consent to receive electronically the Manulife documents listed in the manner described. I acknowledge that I have the computer requirements to access the documents that are made available on Manulife’s website. I understand that I am not required to consent to electronic delivery and that I may revoke my consent at any time.

Please note: We will contact you by phone only if there is a problem with your email address.

The information provided is confidential and will not be used for any purpose other than that described.
