Market Review

The world equity markets advanced in January, building on their positive returns in the final two months of 2023. Overall sentiment remained upbeat on expectations that central banks could achieve the ideal “soft landing” scenario, in which interest rate hikes would tamp down inflation without causing a recession. Continuing the trend that was in place throughout 2022, growth stocks in general—and mega-cap technology companies in the US in particular—led the market higher. Japan was also a notable performer, with the Nikkei-225 Index approaching its all-time high since 1989. Investors appeared to be growing optimistic that the nation’s economy is finally set to emerge from its long period of stagflation. On the other end of the spectrum, emerging markets lost ground due to an accelerating downturn in China’s stock market. The geographical region continued to be plagued by slow growth and persistent concerns about issues in its property sector, as well as the lack of meaningful government stimulus.

The global healthcare sector performed well in global stocks, as measured by the MSCI World Index. From a sub-sector perspective, pharmaceuticals, biotechnology and healthcare equipment and supplies sub-sectors performed very well, while the healthcare providers and services and life sciences tools and services sub-sectors lagged in the MSCI World Health Care Index.

Outlook

We believe that the defensive characteristics of the sector coupled with solid organic growth in select companies should provide strong performance over a full market cycle. In particular, the COVID-19 pandemic has created structural changes within healthcare that provides enhanced investment opportunities across select segments of the sector. We expect mergers and acquisitions activity to remain abundant, as healthcare companies with strong balance sheets utilize excess capital to expand pipeline and product offerings.

Within biopharmaceuticals, we are focused on companies with best-in-class product portfolios serving patients in disease states with inelastic demand. Our aforementioned findings related to structural changes in the healthcare industry support the urgency to effectively manage other pre-existing disease states (cancer, metabolic syndrome, asthma and other immunologic disorders), which our research suggests pre-dispose these comorbid patients to higher morbidity and mortality post-COVID-19. Accordingly, this has led us to favor biopharmaceutical companies over-indexed to cardiovascular disease, Alzheimer’s disease and diabetes.

Fundamentals within select areas of both the healthcare equipment and supplies and life science tools and services industries remain attractive. Specifically, we believe select companies will continue to reap the benefits of the excess cash flows generated from COVID-19 testing consistent with the emerging endemic state of COVID-19. We believe several of these companies will generate above-market returns as the incremental research, capex and pipeline investments they have implemented reach fruition in the coming quarters and years.

Within the healthcare providers and services industry, we see value in select supply chain companies, specifically pharmaceutical wholesalers. We expect these companies to see improving margins from accelerating drug inflation and continued recovery in prescription volumes. We have also maintained our positioning in select healthcare insurers despite pressures on profit profiles associated with COVID-19-induced backlog in office visits and surgeries in the Medicare population.

Overall, we continue to emphasize a bottom-up fundamental research process informed by our assessment of emerging scientific and medical trends, coupled with a thorough intrinsic valuation analysis. This approach should ensure that our allocation of capital is focused on companies tackling important unmet medical needs, pursuing underappreciated market opportunities and/or demonstrating an ability to bend the healthcare cost curve.

The investment fund option for The Manufacturers Life Insurance Company’s variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund’s yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
