Market Review

The broad-based global equity indexes produced gains in July on the strength of an increasingly favorable interest rate outlook, building on the rally that began in November 2023. However, the positive headline return obscured notable changes under the surface. Sectors that had led the way through the market's long advance—namely US mega-cap technology companies and semiconductor stocks—moved sharply lower. At the same time, areas that had previously lagged started to perform well. For example, US small-cap stocks outpaced large caps, the value style topped growth, and the developed international markets exceeded the returns for the US. These trends demonstrate that the downturn in the US tech sector, rather than fueling broad-based weakness, instead sparked a rotation into other areas of the market. The emerging markets were a notable exception. Although the asset class delivered a modest gain in US dollar terms, it lagged due to persistent concerns about China's economy and weakness in the Asian semiconductor stocks with sizable weightings in the major emerging market indexes.

The healthcare sector advanced during the period, performing notably as measured by the MSCI World Index. The life sciences tools and services, healthcare providers and services, and biotechnology sub-sectors performed well, while the healthcare equipment and supplies and pharmaceuticals sub-sectors detracted.

Outlook

We believe that the defensive characteristics of the sector coupled with solid organic growth in select companies should provide notable performance over a full market cycle. In particular, the COVID-19 pandemic has created structural changes within healthcare, which has facilitated enhanced investment opportunities across select segments of the sector. We expect mergers and acquisitions to remain abundant as healthcare companies with strong balance sheets utilize excess capital to expand pipeline and product offerings.

Within biopharmaceuticals, we are focused on companies with best-in-class product portfolios serving patients in disease states with inelastic demand. Our previous findings related to structural changes in the healthcare industry support the urgency to effectively manage other pre-existing disease states (cancer, metabolic syndrome, asthma, and other immunologic disorders), which our research suggests pre-dispose these comorbid patients to higher morbidity and mortality post-COVID-19. Accordingly, this has led us to favor biopharmaceutical companies over-indexed to cardiovascular disease, neurological disease and diabetes.

Fundamentals within select areas of both the healthcare equipment and supplies and life science tools and services industries remain attractive. Specifically, we believe select companies will continue to reap the benefits of the excess cash flows generated from COVID-19 testing, consistent with the emerging endemic state of COVID-19. We believe several of these companies will generate above market returns as the incremental research, capex and pipeline investments they have implemented reach fruition in the coming quarters and years.

Within the healthcare providers and services industry, we see value in select supply chain companies, specifically pharmaceutical wholesalers. We expect these companies to see improving margins from accelerating drug inflation and continued recovery in prescription volumes. We have also modified our positioning in select healthcare insurers, given pressures on profit profiles associated with COVID-19-induced backlog in office visits and surgeries in the Medicare population.

Overall, we continue to emphasize a bottom-up fundamental research process informed by our assessment of emerging scientific and medical trends, coupled with a thorough intrinsic valuation analysis. This approach should ensure that our allocation of capital is focused on companies tackling important unmet medical needs, pursuing underappreciated market opportunities, and/or demonstrating an ability to bend the healthcare cost curve.

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
