## Market Review

The world equity markets moved higher in June, building on the strong rally that began in early April. Investors appeared to remain sanguine about the potential economic impact of US tariffs, and the tensions in the Middle East created only a short-lived headwind. Sentiment stayed generally upbeat as incoming data showed that neither inflation nor economic growth had yet to be affected by the uncertainty surrounding trade. In addition, global monetary policy remained accommodative, and a consensus began to emerge that the US Federal Reserve (Fed) was likely to resume cutting interest rates in the second half of the year. The markets were also boosted by a resurgence in enthusiasm about artificial intelligence (AI), which helped technology stocks regain momentum after their uneven showing earlier in the year. In combination, these factors propelled most major global indexes to all-time highs by the end of the month. Returns were broad-based across geographies, with the US, developed market international stocks, and emerging markets all delivering robust gains.

The healthcare sector increased during the period but detracted, as measured by the MSCI World Index. The life sciences tools and services, healthcare providers and services, and the healthcare equipment and supplies sub-sectors performed well, while the biotechnology and pharmaceuticals sub-sectors lagged.

## Outlook

We believe that the defensive characteristics of the sector coupled with solid organic growth in select companies should provide a strong outperformance over a full market cycle. In particular, the COVID-19 pandemic has created structural changes within healthcare that has facilitated enhanced investment opportunities across select segments of the sector. We expect mergers and acquisitions to remain abundant, as healthcare companies with strong balance sheets utilize excess capital to expand pipeline and product offerings.

Recent volatility in the healthcare sector following the US presidential election has been noteworthy. In particular, concerns over president-elect Trump's nominees for important healthcare administrative roles, including confirmations of Secretary of Health and Human Services (HHS), Commissioner of the Food and Drug Administration (FDA), and Administrator of the Centers for Medicare & Medicaid Services (CMS), have led to concerns over longstanding US policies regarding vaccine policy, FDA regulatory approval pathways, and CMS's Medicare/Medicaid reimbursement frameworks. We remain comfortable that practical changes to longstanding policies in these agencies will be incremental at best. We expect that legislative oversight from the US Congress, along with meaningful input from corporations governed by such policies and the broader scientific community, can and should curtail any dramatic changes in this regard.

From a portfolio perspective, we believe that we are very well positioned to avoid undue exposure to any of these potential headwinds, including the possible financial implications of recently proposed tariffs. Of note, we were pleased to see that the new US tariff proposals excluded explicit tariffs on biopharmaceutical products. We anticipate that new HHS secretary's primary focus will likely be on issues of food safety and vaccination policy. Fortunately, our portfolio has been and remains under indexed to these prospective issues.

Within biopharmaceuticals, we are focused on companies with best-in-class product portfolios serving patients in disease states with inelastic demand. Our previous findings related to structural changes in the healthcare industry support the urgency to effectively manage other pre-existing disease states (cancer, metabolic syndrome, asthma, and other immunologic disorders), which our research suggests pre-dispose these comorbid patients to higher morbidity and mortality post-COVID. Accordingly, this has led us to favor biopharmaceutical companies over-indexed to cardiovascular disease, neurological disease, and diabetes.

Fundamentals within select areas of both the healthcare equipment and supplies and life science tools and services industries remain attractive. Specifically, we believe select companies will continue to reap the benefits of incremental cashflows generated from COVID-19 testing consistent with the ongoing endemic state of COVID-19. We believe several of these companies will generate above market returns as the incremental research, capex, and pipeline investments they have implemented continue to reach fruition in the coming quarters and years.

Within the healthcare providers and services industry, we see significant value in select supply chain companies, specifically pharmaceutical wholesalers. We expect these companies to see improving margins from favorable modifications to patient co-pay obligations driving elevated prescription volumes. We have also modified our positioning in select healthcare insurers, given elevated drug utilization and higher patient morbidity in the Medicare population.

Overall, we continue to emphasize a bottom-up fundamental research process informed by our assessment of emerging scientific and medical trends, coupled with a thorough intrinsic valuation analysis. This approach should ensure that our allocation of capital is focused on companies tackling important unmet medical needs, pursuing underappreciated market opportunities, and/or demonstrating an ability to bend the healthcare cost curve.

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
