## Market Review

In the United States, Treasury yields declined on the back of mixed economic data and FOMC meeting. The May nonfarm payrolls report came in short of market expectations that US economy added 559k jobs, while headline consumer price index rose by 5% y/y in May, hitting the highest monthly gains since 2008. The Fed was generally viewed as hawkish after they kept rates unchanged and hinted higher rate hike likelihood. Fed's dot plot pointed to two hikes in 2023, but the Fed did not issue guidance on tapering its asset purchases. Post-Fed meeting, Fed officials eased inflation fears and expected inflationary pressure to be transitory. Over the period, the 10-year Treasury yield fell from 1.59% to 1.47%, whilst Philippine dollar-denominated (ROP) bond yields also fell tracking the US Treasury yield movement.

Asian investment grade credit markets posted positive returns over the month owing to lower US Treasury yields, tighter credit spreads and positive carry. Credit spreads on the JP Morgan Asian Investment Grade Corporate Bond Index tightened by 8bps. The J.P. Morgan Asian Investment Grade Corporate Bond Index increased by 0.82% in US dollar terms. Asian and Chinese investment grade credit remained relatively resilient, despite softer sentiment towards the China high yield space amid financing pressure and policy tightening concerns on Chinese property sector. In Malaysia, S&P affirmed its A- sovereign rating and maintained negative outlook due to renewed COVID-19 cases, though it did not induce significant price action. An India shipping port operator experienced volatility following a report that its foreign investors funds may be potentially frozen by the authority, its bond prices retraced some of the detraction after the company's denial and clarification. Primary market activity was active as interest rate environment stabilised, with new issues from diversified issuers across Asia and various sectors.

## Outlook

US economic recovery trajectory is expected to extend amid steady vaccine rollout, despite higher number of COVID-19 cases due to new variants. With hospitalization and fatality rates under control, investors are turning their focus to economic recovery and strong corporate earnings. Default rates year-to-date also came lower than previously expected amid abundant global liquidity. We continue to expect the Fed to maintain a relatively accommodative monetary policy amid slack in US labour market and commitment to its average inflation targeting policy framework. Furthermore, the Fed and other central banks are more inclined to keep interest rate volatility low and for financial conditions to remain stable to promote economic recovery. Most North Asian economies fared better in terms of economic recovery compared to South Asian counterparts. Notably, China's economic growth momentum continues amid increasing signs of improving domestic consumption. While we are not overly concerned over the new COVID-19 variants on Asian bond markets, we remain cognizant of both systemic and idiosyncratic risks while seeking out attractive opportunities and believe that bottom-up credit selection will be key in generating further returns going forward.

---

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Asset Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
