Market Review

The broad-based global equity indexes lost ground in March amid persistent headlines about the US trade policy. The Trump administration levied a series of tariffs on Europe, Canada, China, and other geographic regions, raising concerns that inflation would reaccelerate, and economic growth could slow down. In addition, the shifting daily announcements from the White House fueled meaningful uncertainty among both investors and the business community. US equities were hit particularly hard in the ensuing sell-off, causing the US to finish as one of the lagging major markets for the month. US technology stocks, which faced an additional headwind from worries that spending on artificial intelligence infrastructure may be lower than previously hoped, were notable laggards in the downturn. Despite the turbulence in the US, both developed and emerging market international equities finished the month near the break-even mark. The positive performance reflected generally supportive fiscal policy overseas and the continued rotation of investors out of the US.

The healthcare sector declined during the period but meaningfully performed, as measured by the MSCI World Index. The health care providers and services and biotechnology sub-sectors performed well while the life sciences tools and services, healthcare equipment and supplies, and pharmaceuticals sub-sectors lagged.

Outlook

We believe that the defensive characteristics of the sector coupled with solid organic growth in select companies should provide a strong performance over a full market cycle. In particular, the COVID-19 pandemic has created structural changes within healthcare that has facilitated enhanced investment opportunities across select segments of the sector. We expect mergers and acquisitions (M&A) activities to remain abundant, as healthcare companies with strong balance sheets utilize excess capital to expand pipeline and product offerings.

Recent volatility in the healthcare sector following the US presidential election has been noteworthy. In particular, concerns over President Trump's nominees for important healthcare administrative roles, including confirmations of the Health and Human Services (HHS) Secretary, Food and Drug Administration (FDA) Commissioner, and the Centers for Medicare & Medicaid Services (CMS) Administrator, have led to concerns over longstanding US policies regarding vaccine administration, FDA regulatory approval pathways, and CMS's Medicare/Medicaid reimbursement frameworks. We remain comfortable that practical changes to longstanding policies in these agencies will be incremental at best. We expect that legislative oversight from the US Congress, along with meaningful input from corporations governed by such policies and the broader scientific community, can and should curtail any dramatic changes in this regard.

From a portfolio perspective, we believe that we are very well positioned to avoid undue exposure to any of these potential headwinds, including the possible financial implications of recently proposed tariffs. Of note, we were pleased to see that the new US tariff proposals excluded explicit tariffs on biopharmaceutical products. We anticipate that new HHS Secretary's primary focus will likely be on issues of food safety and vaccination policy. Fortunately, our portfolio has been and remains under indexed to these prospective issues.

Within biopharmaceuticals, we are focused on companies with best-in-class product portfolios serving patients in disease states with inelastic demand. Our previous findings related to structural changes in the healthcare industry support the urgency to effectively manage other pre-existing disease states (cancer, metabolic syndrome, asthma, and other immunologic disorders), which our research suggests pre-dispose these comorbid patients to higher morbidity and mortality post-COVID. Accordingly, this has led us to favor biopharmaceutical companies over-indexed to cardiovascular disease, neurological disease, and diabetes.

Fundamentals within select areas of both the health care equipment and supplies and life science tools and services industries remain attractive. Specifically, we believe select companies will continue to reap the benefits of the excess cashflows generated from COVID-19 testing consistent with the ongoing endemic state of COVID-19. We believe several of these companies will generate above market returns as the incremental research, capex and pipeline investments they have implemented continue to reach fruition in the coming quarters and years.

Within the healthcare providers and services industry, we see significant value in select supply chain companies, specifically pharmaceutical wholesalers. We expect these companies to see improving margins from favorable modifications to patient co-pay obligations driving elevated prescription volumes. We have also modified our positioning in select healthcare insurers given elevated drug utilization and higher patient morbidity in the Medicare population.

Overall, we continue to emphasize a bottom-up fundamental research process informed by our assessment of emerging scientific and medical trends, coupled with a thorough intrinsic valuation analysis. This approach should ensure that our allocation of capital is focused on companies tackling important unmet medical needs, pursuing underappreciated market opportunities, and/or demonstrating an ability to bend the healthcare cost curve.

PHP Global Health Fund

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
