Market Review

Stocks performed very well in November, pushing most global indexes toward their year-to-date highs late in the month. The shifting interest-rate outlook was the primary driver of the rally. From August through October, equities had moved steadily lower on concerns that persistent inflation would cause world central banks to keep interest rates “higher for longer.” Bond yields spiked in response, pressuring stock market performance. The consensus view changed considerably in November, however, as a string of weaker-than-expected inflation reports worldwide—together with dovish comments from central bank officials—prompted investors to begin factoring in the possibility that rate cuts could begin in the first half of 2024. Stocks surged in reaction to the more favourable outlook, with positive returns across virtually all categories, sectors, and regions. Growth stocks in general, and US mega-cap technology stocks in particular, led the way due in part to their above-average sensitivity to rate movements.

The global healthcare sector advanced during the period, however, the overall sector trailed global stocks, as measured by the MSCI World Index. Within healthcare, the life sciences tools and services and healthcare equipment and supplies sub-sectors performed well, whilst the healthcare providers and services and biotechnology sub-sectors lagged the MSCI World Health Care Index.

Outlook

We believe exposure to the healthcare sector offers the potential for strong long-term performance. In particular, the COVID-19 pandemic has created structural changes within healthcare that provides enhanced investment opportunities across select segments of the sector. We expect mergers and acquisitions to remain abundant, as healthcare companies with strong balance sheets utilise excess capital to expand pipeline and product offerings. We continue to deploy our bottom-up fundamental investment process informed by assessment of emerging scientific and medical trends coupled with our intrinsic valuation analysis. This approach should ensure that our allocation of capital is focused on companies tackling important unmet medical needs, pursuing underappreciated market opportunities, and/or demonstrating an ability to bend the healthcare cost curve.

Within the biopharmaceuticals sub-sector, we are focused on companies with best-in-class product portfolios serving patients in disease states with inelastic demand. Our aforementioned findings related to structural changes in the healthcare industry support the urgency to effectively manage other pre-existing disease states (cancer, metabolic syndrome, asthma, and other immunologic disorders), which our research suggests pre-dispose these comorbid patients to higher morbidity and mortality post-COVID. Accordingly, this has led us to favour biopharmaceutical companies over-indexed to cardiovascular disease, Alzheimer’s disease, and diabetes.

Fundamentals within select areas of both the healthcare equipment and supplies and life science tools and services industries remain attractive. Specifically, we believe select companies will continue to reap the benefits of the excess cashflows generated from COVID testing, consistent with the emerging endemic state of COVID. We believe several of these companies will generate above-market returns as the incremental research, capex, and pipeline investments they have implemented reach fruition in the coming quarters and years.

Within the healthcare providers and services industry, we see value in select supply chain companies, specifically pharmaceutical wholesalers. We expect these companies to see improving margins from accelerating drug inflation and continued recovery in prescription volumes. We have also maintained our position in select healthcare insurers commensurate with improved profit profiles associated with the COVID-19-induced reduction in office visits and surgeries in the Medicare population.

Overall, we believe that the defensive characteristics of the sector coupled with solid organic growth in select companies should provide strong performance over a full market cycle.

The investment fund option for The Manufacturers Life Insurance Company’s variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund’s yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
