Market Review

After a long stretch of poor performance in August and September, global equity markets staged a strong rebound in October. Investors appeared to be encouraged that the US Federal Reserve Board (Fed) and other major central banks, whilst continuing to raise interest rates, were moving closer to the point where they could “pivot” to a less aggressive stance. In addition, better-than-expected corporate earnings dampened concerns that rising rates and slowing growth would have a significant impact on profits in 2022.

Notably, value stocks led the market’s advance as investors displayed a clear preference for companies with higher near-term cash flows (a positive when rates are rising). On a regional basis, Europe, the United States and Canada all outperformed. On the other hand, emerging markets posted a loss due largely to continued weakness in China. President Xi Jinping used the National Congress of the Chinese Communist Party to tighten his grip on power, raising fears that the nation would continue to pursue a policy direction unfriendly to business and the financial markets.

The health care sector advanced during the period and performed better than global markets, as measured by the MSCI World Index. The life science tools & services and healthcare technology sub-sectors performed behind the overall sector, whilst biotechnology and healthcare providers & services companies performed ahead.

Outlook

We believe select companies within the health care sector offer the potential for strong long-term performance. We continue to deploy our bottom-up fundamental investment process informed by assessment of emerging scientific and medical trends coupled with our intrinsic valuation analysis. This approach should ensure that our allocation of capital is focused on companies tackling important unmet medical needs, pursuing underappreciated market opportunities, and/or demonstrating an ability to bend the healthcare cost curve.

Within the biopharmaceuticals sub-sector, we are focused on companies with best-in-class product portfolios serving patients in disease states with inelastic demand (cancer, cardiovascular disease, diabetes, etc.). In addition, we have selectively rounded up positions with direct exposure to pandemic related therapeutics and vaccines, consistent with our continued thesis that the pandemic/endemic will persist for several more quarters if not years. We also continue to monitor potential volatility given possible US drug pricing actions corresponding with recent congressional legislative initiatives. Drug pricing and access provisions of the recently passed Inflation Reduction Act appear relatively neutral in our view but warrant continued scrutiny and analysis.

Fundamentals within specific pockets of both the health care equipment & supplies and life science tools & services industries remain attractive and valuations have come in as a result of pressure on both sub-sectors. Specifically, select established leaders in the pandemic diagnostics space offer a unique investment opportunity as we believe the durability of these businesses is currently being underappreciated by the market. In addition, we expect certain companies to experience disproportionate disruptions as a result of the ongoing pandemic and have reduced our exposures accordingly.

Within the health care providers & services industry, we see value in select supply chain companies, specifically pharmaceutical wholesalers. We expect these companies to see improving margins from accelerating drug inflation and continued recovery in prescription volumes. We have also increased our positioning in select healthcare insurers commensurate with improved profit profiles associated with the pandemic induced reduction in office visits and surgeries in the Medicare population.

Mergers and acquisitions activity in the health care sector appears to be increasing as we have entered the later stages of a multi-year capital markets financing window, and we expect the historic run of initial public offerings and secondary offerings to continue to wane over time. We believe the Fund is well positioned in this regard, and recently saw the completion of an acquisition of one of our healthcare IT companies.

Notwithstanding aforementioned headline risks, we believe that the defensive characteristics of the sector coupled with solid organic growth in select companies should provide strong performance over a full market cycle.

The investment fund option for The Manufacturers Life Insurance Company’s variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund’s yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
