Market Review

Global equities produced mixed results in October. While the broad-based world indexes delivered a modest gain, almost all of the positive returns came from North America. US equities, which make up an increasingly large portion of the global indexes, continued to rally behind supportive interest rate policy, robust corporate earnings, and growing expectations for a market-friendly election outcome. The US advance translated to a resumption of performance for the growth style following relative strength for value stocks during the third quarter. Canada also performed well, fueled by a half-point interest rate cut by the Bank of Canada. The picture was less positive overseas, where stocks in Europe and Asia lost ground on concerns about sluggish economic growth and the potential for an unfavorable shift in trade policy after the US elections. Emerging market stocks also moved lower, as the initial excitement about China's stimulus programs gave way to skepticism as to whether the planned measures would indeed have a meaningful impact.

The healthcare sector declined during the period as measured by the MSCI World Index. The biotechnology and healthcare equipment and supplies sub-sectors performed well while the pharmaceuticals, life sciences tools and services, and healthcare providers and services sub-sectors lagged.

Outlook

We believe that the defensive characteristics of the sector coupled with solid organic growth in select companies should provide a strong performance over a full market cycle. In particular, the COVID-19 pandemic has created structural changes within healthcare that has facilitated enhanced investment opportunities across select segments of the sector. We expect mergers and acquisitions activities to remain abundant as healthcare companies with strong balance sheets utilize excess capital to expand pipeline and product offerings.

Within biopharmaceuticals, we are focused on companies with best-in-class product portfolios serving patients in disease states with inelastic demand. Our previous findings related to structural changes in the healthcare industry support the urgency to effectively manage other pre-existing disease states (cancer, metabolic syndrome, asthma, and other immunologic disorders), which our research suggests pre-dispose these comorbid patients to higher morbidity and mortality post-COVID. Accordingly, this has led us to favor biopharmaceutical companies over-indexed to cardiovascular disease, neurological disease, and diabetes.

Fundamentals within select areas of both the healthcare equipment and supplies and life science tools and services industries remain attractive. Specifically, we believe select companies will continue to reap the benefits of the excess cash flows generated from COVID testing consistent with the ongoing endemic state of COVID. We believe several of these companies will generate above market returns as the incremental research, capex, and pipeline investments they have implemented continue to reach fruition in the coming quarters and years.

Within the healthcare providers and services industry, we see value in select supply chain companies, specifically pharmaceutical wholesalers. We expect these companies to see improving margins from favorable modifications to patient co-pay obligations driving elevated prescription volumes. We have also modified our position in select healthcare insurers, given elevated drug utilization and higher patient morbidity in the Medicare population.

Overall, we continue to emphasize a bottom-up fundamental research process informed by our assessment of emerging scientific and medical trends, coupled with a thorough intrinsic valuation analysis. This approach should ensure that our allocation of capital is focused on companies tackling important unmet medical needs, pursuing underappreciated market opportunities, and/or demonstrating an ability to bend the healthcare cost curve.

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
