Market Review

Global equities performed well in September amid generally upbeat news flow, adding to their strong year-to-date gains and propelling the major world indexes to a series of new all-time highs. Investor sentiment remained robust, reflecting the combination of positive global growth, healthy corporate earnings, and interest rate cuts by the US Federal Reserve (Fed) and other central banks. The US was a key driver of the positive returns, with the technology sector performing particularly well amid ongoing enthusiasm about artificial intelligence (AI). In addition, the US Fed's quarter-point rate cut raised hopes that several more reductions would be in store over the coming year. The gains were somewhat narrower overseas. Europe finished in positive territory but failed to keep pace with the US, primarily as a result of a downturn in Germany. Developed Asia also lagged, with muted returns across the board. On the other hand, emerging markets experienced a meaningful rally and strongly outpaced their developed market peers, thanks in part to an impressive advance for China.

The healthcare sector increased during the period but lagged, as measured by the MSCI World Index. The healthcare providers and services and biotechnology sub-sectors performed well, while the healthcare equipment and supplies, life sciences tools and services, and pharmaceuticals sub-sectors lagged.

Outlook

We believe that the defensive characteristics of the sector coupled with solid organic growth in select companies should provide strong performance over a full market cycle. In particular, the COVID-19 pandemic has created structural changes within healthcare that has facilitated enhanced investment opportunities across select segments of the sector. We expect mergers and acquisitions to remain abundant as healthcare companies with strong balance sheets utilize excess capital to expand pipeline and product offerings.

Recent volatility in the healthcare sector following the US presidential election has been noteworthy. Concerns over longstanding US policies regarding vaccine availability, FDA regulatory approval pathways, and CMS's Medicare/Medicaid reimbursement frameworks have weighed on the sector. We remain comfortable that practical changes to longstanding policies in these agencies will be incremental at best. We expect that legislative oversight from the US Congress, along with meaningful input from corporations governed by such policies and the broader scientific community, can and should curtail any dramatic changes in this regard.

From a portfolio perspective, we believe that we are very well positioned to avoid undue exposure to any of these potential headwinds, including the possible financial implications of recently proposed tariffs. Of note, we were pleased to see that the new US tariff proposals excluded explicit tariffs on biopharmaceutical products. We anticipate that new HHS secretary's primary focus will likely be on issues of food safety and vaccination policy. Fortunately, our portfolio has been and remains under indexed to these prospective issues.

In addition, the healthcare sector has experienced modest volatility following the July passage of the US Reconciliation Bill (One, Big, Beautiful Bill Act or OBBA). While this law facilitates meaningful cuts (~USD1.2 trillion over 10 years) in US government healthcare spending, these cuts are primarily directed at Medicaid and ACA (Affordable Care Act a.k.a. Obama Care) insurance programs. Fortunately, coming into the year our portfolio holdings were well positioned to minimize potential downside implications from these cuts. More specifically, we had maintained limited if any exposure to the Medicaid and ACA insurers, as well as limited exposure to publicly traded hospital companies. One positive ramification of the OBBA worth noting was a carve out provision protecting rare and orphan drugs from potential price cuts under Medicare negotiations. We had maintained and continue to find interesting investment opportunities in these orphan drug companies.

Within biopharmaceuticals, we are focused on companies with best-in-class product portfolios serving patients in disease states with inelastic demand. Our previous findings related to structural changes in the healthcare industry support the urgency to effectively manage other pre-existing disease states (cancer, metabolic syndrome, asthma, and other immunologic disorders), which our research suggests pre-dispose these comorbid patients to higher morbidity and mortality post-COVID. Accordingly, this has led us to favor biopharmaceutical companies over-indexed to cardiovascular disease, neurological disease, and diabetes.

Fundamentals within select areas of both the healthcare equipment and supplies and life science tools and services industries remain attractive. Specifically, we continue to favor select companies working in the fields of electrophysiology and hypertension, which we believe hold great promise in underserved populations with substantial unmet medical needs. We expect several of these companies will continue to generate above-market returns as the incremental research, capex, and pipeline investments they have implemented continue to reach fruition in the coming quarters and years.

Within the healthcare providers and services industry, we continue to see significant value in select supply chain companies, specifically pharmaceutical wholesalers. We expect these companies to see improving margins from favorable modifications to patient co-pay obligations, driving elevated prescription volumes. We have also modified our positioning in select healthcare insurers, given elevated drug utilization and higher patient morbidity in the Medicare population. In addition, we continue to maintain an underweight exposure to Medicaid and ACA insurers as previously discussed.

Overall, we continue to emphasize a bottom-up fundamental research process informed by our assessment of emerging scientific and medical trends, coupled with a thorough intrinsic valuation analysis. This approach should ensure that our allocation of capital is focused on companies tackling important unmet medical needs, pursuing underappreciated market opportunities, and/or demonstrating an ability to bend the healthcare cost curve.

PHP Global Health Fund

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
