Market Review

US bonds declined sharply in January as bond yields moved materially higher during the month. One key factor was the continuing upward trajectory in the inflation rate—consumer inflation rose by 7% in 2021, the highest 12-month inflation rate in nearly 40 years. In addition, the US economy grew by 5.7% in 2021, its strongest calendar-year growth rate since 1984. The combination of improving economic conditions and above-trend inflation led the bond market to price in multiple interest rate increases by the US Federal Reserve Board (Fed) in the coming year, with the first expected as soon as March.

As a result, bond yields rose significantly across the board, with short and intermediate-term yields climbing the most in response to changing Fed policy. From a sector perspective, investment-grade and high-yield corporate bonds posted the largest declines, reflecting some uncertainty about the economic impact of the potential Fed rate hikes. The securitised sectors of the market, which include bonds backed by mortgages and other consumer debt, held up the best given their relatively limited interest-rate sensitivity.

Outlook

While uncertainty has increased due to the spread of the Delta and Omicron variants, accommodative central bank policies in addition to vaccination rates globally that are increasing, should allow for the global economy to continue to recover although at potentially a slower pace. The utility, energy, communication, and consumer cyclical industries stand to benefit significantly. Utility common equity valuation multiples are at the lowest level in the last ten years. We believe convertible preferred securities of utility issuers will benefit as valuation multiples rise. Midstream concerns of counterparty credit risk and low volumes have abated, strengthening midstream credit profiles. Residential and commercial broadband demand is at an all-time high, improving the credit outlook for communication issuers. And consumer cyclical issuers should benefit from increased consumer spending levels and positive implications of the pending infrastructure spending legislation.

The Fund is overweight the utilities sector which has limited exposure from an economic standpoint to the coronavirus. Commercial and industrial electricity demand has declined but at the same time, residential demand increased as many Americans continue to work from home. Importantly, utilities often make between 2-3 times more margin from residential customers than they do commercial and industrial. In addition, most utilities have regulatory mechanisms in place to make up for lost demand. We see tremendous value in the utility preferred space as many of these securities are not trading on their underlying fundamentals. Further, we believe that President Biden will incentivise renewable energy investments which will result in even better earnings and cash flows for the next several years.

Financial services companies, another large weighting in the portfolio, are well-positioned from a balance sheet standpoint for this crisis. US banks are strong, well-capitalised with good liquidity. During the 2008-09 financial crisis, banks were forced to tighten their lending standards because of their weak balance sheets. Insurance companies, regulated by the states where they operate, similarly are well-positioned from a balance sheet standpoint currently. Property and casualty insurance companies are benefiting from increases in premiums paid as these companies have been raising prices owing to several years of higher-than-expected claims. We see value in the financial services sector as the market is not recognising their strong balance sheets.

The Fund's holdings in the energy sector do not have direct exposure to commodity prices. Our energy holdings are midstream companies that transport oil and/or gas on their pipelines. Many of these companies are diversified into different areas of the midstream space such as natural gas pipelines, gasoline pipelines and storage. Overall, we are confident in the stability of the income in our midstream names. We view the yields offered by these companies as very attractive.

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
