- Short Term Bond Pool: Peso-denominated bonds of the Republic of the Philippines with a term of up to three years and term deposits.
- Equity Pool: Various stocks listed on the PSE and term deposits

# Peso Target Income Fund

## Market Review

The Philippine Stock Exchange Index was up by 1% to close at 6,774.68 points in May. The market started weak in the early part of May as concerns over global economic slowdown and uncertainties over the economic direction from the new administration dragged the market lower. However the market started to rally as the incoming administration's economic team started to take shape.

Economic recovery remains underway as evidenced by the strong corporate earnings in the first quarter. Earnings sequentially rose 14%, indicating a sustained return to pre pandemic profitability. Consumer discretionary and mall operators reported strong topline growth as they are the main beneficiaries on the reopening of the economy. Loan growth for April accelerated to 10.1% y/y as the banking sector gained from the upswing in economic activity as well.

On the other hand, the Philippine economy continues to face headwinds as rising commodity costs persist. Crude oil was up 12% for the month of May, reaching \$122 a barrel. In addition, there is a growing concern over global food shortage as declining supply of wheat, potatoes and flour is forcing food manufacturers and restaurants to cut production. Note that Philippines' May inflation reached 5.4%, the highest level recorded since 2019.

Strong 1Q GDP data, rising inflation, along with a generally hawkish bias among global central banks prompted the Bangko Sentral ng Pilipinas (BSP) to finally shift its focus from growth to inflation. First quarter GDP jumped by 8.3% year-on-year, reflecting low base effects and recovery in demand. Private consumption and investments, both key growth drivers, jumped during the quarter, while government spending weakened. On the other hand, inflation in May rose to 5.4% from 4.9% in April, way above the BSP's inflation target of 2-4%. The faster-than-expected increase in prices is driven by higher prices of food, non-alcoholic beverages, as well as electricity and oil. Consequently, the BSP raised policy rate by 25bps to 2.25% on May 19. BSP Governor Diokno noted that inflation expectations have risen as second-round inflation effects, including wage hikes have emerged. Furthermore, the BSP increased its inflation forecast for this year to 4.6% from 4.3% and next year to 3.9% from 3.6%.

## Outlook

We remain generally cautious on the Philippine equity market as the rising concerns over inflation and food shortage could bring volatility to the market. This could potentially also have a negative impact over consumer spending for the rest of the year. Meanwhile, the PSEI is trading already at attractive valuations, trading at only 13x price to forward earnings, a steep discount from our 5-Year average of 15.3x. Current market valuations are also at the lowest level in the past five years if we exclude the drop during the start of the pandemic in March 2020. We have a favorable view on financial and shopping mall segments, sectors that are quite resilient during this environment.

Against this backdrop, we are inclined to maintain the bonds funds' defensive position with a shorter duration position vis-à-vis the benchmark. We will be watching out for any improvement in risk sentiment to determine possible trading opportunities in the bond market.

---

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Asset Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
