

# Peso Wealth Optimizer Fund 2031

An investment fund option for variable life insurance products of **The Manufacturers Life Insurance Co., (Phils), Inc.**

## Investment Objective

The Fund seeks to maximize long-term capital growth while managing the risk of capital erosion as the target date approaches through a dynamic rebalancing of exposure to diversified portfolios of peso-denominated fixed income securities and securities listed on the Philippine Stock Exchange and/or pooled funds that invest in these securities and other liquid fixed income instruments.

Past performance is not an indication of future results. Information about the portfolio's holdings, asset allocation, or country diversification is historical and is not an indication of future portfolio composition, which will vary.

## Why Peso Wealth Optimizer Funds?

Investing through a target date approach simplifies asset allocation for an average investor. The asset mix changes over time, becoming more conservative as the investor's financial milestone draws closer.

The change in asset allocation over time is called the **glide path** which Manulife designed specifically for these funds.

The glide path's objectives include:

- To maximize wealth accumulation prior to target date
- To minimize risk as the target date approaches
- To make wealth last long enough to support any financial needs beyond the chosen target date

## Top Five Holdings

Bond Pool		Short-Term Bond Pool	
FXTN 03/09/24	14.93%	Manulife Stable Income Fund Class I	37.93%
FXTN 08/12/25	14.14%	FXTN 03/09/24	9.75%

## Market Review

The Philippine Stock Exchange Index declined 6.6% to close at 6,731 points in April. The drop was driven by concerns on rising prices of goods, higher global interest rates as well as uncertainty going into elections. The detection of the Omicron subvariant in the Philippines during the period made sentiment worse as it could derail the momentum of the reopening of the economy.

The country's economic recovery remains intact as evidenced by the 8.3% GDP growth during 1Q22. Headwinds remain however such as rising inflation which reached 4.9% in April, an acceleration from 4% the prior month. The rise in overall cost of goods was driven by higher global commodity prices which brought food, oil and transportation costs higher. Meanwhile, the Bangko Sentral ng Pilipinas has recently raised policy rates by 25bps as the recovery of the economy is underway as evidenced by the strong 1Q22 GDP Growth.

The Philippine equity market completed reporting FY2021 earnings in April. Results were broadly in line with expectations underpinned by a strong recovery in the fourth quarter. Major beneficiaries of the country's reopening including the Consumer Discretionary and Real Estate sectors recorded robust revenue growth in 4Q21. Meanwhile banks continued to report an acceleration in loan growth, reaching +8.9% YoY in March.

The Bangko Sentral ng Pilipinas (BSP) has kept policy rates unchanged since November of 2020 but recent rhetoric from BSP Gov. Diokno have noted that the lift-off may begin as early as June. Supportive of this view are two factors, namely 1) the elevated inflation environment and 2) the higher than expected 1Q GDP print. Local inflation has recently been on an uptrend with April printing at 4.9% from March's 4%, still higher from February's 3%, mainly driven by global oil prices. In addition, the surprise 8.3% GDP print for the first quarter was much higher than market expectations of 6.8% and places pressure of a rate hike at the upcoming May 19 Monetary Board (MB) meeting.

## Outlook

We remain generally constructive on the Philippine equity market as the recent elections was relatively peaceful and orderly. We are optimistic that the recovery of the economy remains underway given the strong 1Q22 GDP growth. Corporate revenue and income growth remain supportive of this thesis as well. The short-term direction of the market will likely remain volatile as the new administration's emerging economic policy takes shape. We are also watchful on inflation pressures as it can impact consumption and overall growth.

Local bond yields on the belly to long-ends trended higher for the month of April as the Bureau of Treasury (BTr) continues to aggressively accept bids on the high end of market expectations at the weekly bond auction. This behavior, in addition to the weekly bond supply has led to lackluster appetite for local bonds. We expect investors to be cautious ahead of the MB meeting in case a rate hike is triggered sooner than June. Against this backdrop, we will keep the portfolio in a more defensive position with a shorter duration vis-avis the benchmark.

---

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Asset Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
