

Peso Wealth Optimizer Fund 2031

An investment fund option for variable life insurance products of **The Manufacturers Life Insurance Co., (Phils), Inc.**

Investment Objective

The Fund seeks to maximize long-term capital growth while managing the risk of capital erosion as the target date approaches through a dynamic rebalancing of exposure to diversified portfolios of peso-denominated fixed income securities and securities listed on the Philippine Stock Exchange and/or pooled funds that invest in these securities and other liquid fixed income instruments.

Past performance is not an indication of future results. Information about the portfolio's holdings, asset allocation, or country diversification is historical and is not an indication of future portfolio composition, which will vary.

Why Peso Wealth Optimizer Funds?

Investing through a target date approach simplifies asset allocation for an average investor. The asset mix changes over time, becoming more conservative as the investor's financial milestone draws closer.

The change in asset allocation over time is called the **glide path** which Manulife designed specifically for these funds.

The glide path's objectives include:

- To maximize wealth accumulation prior to target date
- To minimize risk as the target date approaches
- To make wealth last long enough to support any financial needs beyond the chosen target date

 -Peso Bond Pool: Peso-denominated bonds of the Republic of the Philippines and term deposits.
 -Short Term Bond Pool: Peso-denominated bonds of the Republic of the Philippines with a term of up to three years and term deposits.

Peso Wealth Optimizer Fund 2031

Market Review

The Philippine Stock Exchange Index (PSEi) gained 4.48% in August, closing at 6,897.54. This positive performance for the market was accounted for by the Bangko Sentral ng Pilipinas' decision cut policy rates by 25bps from 6.5% to 6.25%. Also, the positive market performance was further supported by increasing expectations that the US Federal Reserve may be closer to reducing their policy rate as early as fourth quarter of 2024.

Inflation decreased to 3.3% for the month of August on account of lower food prices. The August inflation figures was lower than forecast of 3.6%, and lower than 4.4% in July. The August inflation print is supportive of lower inflation in the coming months. The National Economic and Development Authority (NEDA) said that easing inflation is consistent with other ASEAN countries and will support growth in household consumption especially in low-income households.

Gross Domestic Product growth for second quarter increased to 6.3% year-on-year, faster than 5.3% registered in the first quarter following a strong rebound in government spending of 10.7% and capital formation of 11.5%. Private consumption growth remained steady at 4.6%.

The local bond market held on to gains as expectations on easing inflation and monetary policy remain intact. Indeed, the Bangko Sentral ng Pilipinas (BSP) proceeded with its planned 25bps rate cut mid-August despite the uptick of local inflation in July. Similarly, the U.S. bond market remained strong with U.S. 10-year yields staying below 4% and the market pricing in up to 100bps of total rate cuts from the Federal Reserve this year.

Outlook

We are positive Philippine equities as macroeconomic tailwinds from strong peso and lower oil prices contribute to both falling inflation and improvement in household spending for the fourth quarter of 2024. We expect that the BSP may have room to cut rates one more time in the latter part of 2024 if inflation continues its downward path. From an ASEAN perspective, we think the focus for investors will shift to countries that will continue to benefit from a falling interest rate environment of which Philippines can be a main beneficiary. Despite the recent rally, we think that there is still upside to the market as valuations continue to remain attractive at 10.5x price to earnings vis-à-vis long-term average of 15x.

Looking ahead, we maintain a positive view on the local bond market, especially as the uptick in July inflation proved to be temporary. August inflation eased to 3.3% due to slower increase in food prices and decline in transport costs. With the likelihood of a reserve requirement ratio and another policy rate cut this year, we can expect interest rates to decline further and market retracements to be shallow.

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
