

Peso Wealth Optimizer Fund 2036

An investment fund option for variable life insurance products of **The Manufacturers Life Insurance Co., (Phils), Inc.**

Investment Objective

The Fund seeks to maximize long-term capital growth while managing the risk of capital erosion as the target date approaches through a dynamic rebalancing of exposure to diversified portfolios of peso-denominated fixed income securities and securities listed on the Philippine Stock Exchange and/or pooled funds that invest in these securities and other liquid fixed income instruments.

Past performance is not an indication of future results. Information about the portfolio's holdings, asset allocation, or country diversification is historical and is not an indication of future portfolio composition, which will vary.

Why Peso Wealth Optimizer Funds?

Investing through a target date approach simplifies asset allocation for an average investor. The asset mix changes over time, becoming more conservative as the investor's financial milestone draws closer.

The change in asset allocation over time is called the **glide path** which Manulife designed specifically for these funds.

The glide path's objectives include:

- To maximize wealth accumulation prior to target date
- To minimize risk as the target date approaches
- To make wealth last long enough to support any financial needs beyond the chosen target date

-Peso Bond Pool: Peso-denominated bonds of the Republic of the Philippines and term deposits.
-Short Term Bond Pool: Peso-denominated bonds of the Republic of the Philippines with a term of up to three years and term deposits.

Peso Wealth Optimizer Fund 2036

Market Review

In January, the Philippine Stock Exchange Index (PSEi) fell by 10.18%, closing at 5,862.59. This month's decline was part of a downward trend that started in early October, leading to a bear market with a total drop of 22%. The persistent weakness in the Philippine markets is attributed to escalating trade war rhetoric from the U.S. and disappointing private consumption figures affecting fourth-quarter GDP results.

Market weakness in January was further aggravated by index rebalancing flows, as Ayala REIT and China Banking Corporation were added to the index, replacing Nickel Asia Corporation and Wilcon Depot, Inc.

The fourth-quarter Gross Domestic Product grew by 5.2% year-on-year, falling short of the expected 5.6%. The full-year GDP increased by 5.4% year-on-year. The shortfall in fourth-quarter GDP growth was driven by weaker consumer recovery, which grew by only 4.7% year-on-year as compared to 5.2% the prior quarter. However, government spending offset this weakness, growing by 9.7% in the fourth quarter.

In January, the Consumer Price Index rose by 2.9% year-on-year, according to the Philippine Statistics Authority. Price increases were notable in categories such as food, alcoholic beverages, and transportation. The rise in food prices was primarily due to increases in vegetables, meat, and fish, while rice prices declined by 2.3% in January after a 0.8% increase in December.

The yield curve steepened in January as the market anticipates a continuation of rate cuts while remaining defensive given uncertainties over U.S. President Trump's policies. Latest macro data continue to show benign inflation and sluggish growth, which increases the likelihood that the BSP will proceed with a 25bps policy rate cut this week, as expected by the market. January inflation printed at 2.9% YoY, while full-year 2024 GDP growth printed at 5.6%, missing the government's target of 6% to 6.5%.

Short-term yields fell by up to 30bps, pushing bond yields 5 years and shorter below 6%. On the other hand, yields at the long-end rose by 10-20bps, with liquidity thinning out for bonds with maturities beyond 10 years.

Outlook

We remain cautiously optimistic about Philippine equities for the first quarter of 2025 due to a lack of positive catalysts. However, the subdued macroeconomic numbers on GDP may enhance the likelihood of the Bangko Sentral ng Pilipinas considering rate cuts in its upcoming Monetary Board Meeting in February.

Currently, the PSEi is trading at a P/E ratio of around 9.5x. We remain on the cautiously selective on the stocks until more positive catalysts for Philippine equities emerge, possibly in the second half of 2025. Key developments to watch from a top-down perspective include a recovery in domestic demand, potential bank reserve requirement cuts, and stability in the peso exchange rate relative to the U.S. dollar.

Looking ahead, we expect the local bond market to broadly track movements in U.S. Treasuries with some defensiveness from a potential jumbo Retail Treasury Bond issuance in a few weeks. Nevertheless, we maintain a slight positive view over the medium-term with a curve steepening bias. While we expect inflation to remain benign, U.S. President Trump's trade rhetorics will likely keep investors on their toes, adding to risk premium at the long-end.

The investment fund option for The Manufacturers Life Insurance Company's variable life insurance product is managed by Manulife Investment Management and Trust Corporation.

The Fund mentioned in this document is specific to variable life insurance contracts and is not considered a mutual fund. Yields depend on interest and foreign exchange rate levels, both of which may fluctuate. Other factors that affect yield include changes in the credit standing of the issuers and changes in the value of the stocks and dividends received. Further, investments of the Fund may provide that their values be determined based on prices or yields of other securities, instruments or foreign currencies, and such provisions may result in negative fluctuations in the value of these investments and, in turn, the Fund's yields. Thus, the performance of the separate account(s) is not guaranteed and the value of the policy could be less than the capital invested. THE VARIABLE LIFE POLICYHOLDER SHALL BEAR ALL INVESTMENT RISKS. Past performance of the Fund is not necessarily indicative of future performance. Yields are not guaranteed.
