Outlook and Strategy

Lingering worries over slower consumer demand and the significant drop in public works spending may cap further near-term market gains. From a portfolio perspective for 2026, a low policy rate environment coupled with a tentative growth outlook makes defensive sectors such as utilities and REITs attractive, despite their strong performance in 2025. We will continue to wait for clear positive macro catalysts—both from corporate earnings and GDP—before considering reallocating back into cyclical sectors such as banks, property, and consumer discretionary.
